Pathology of the Eye

It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology. Not since the three volumes of the Henke-Lubarsch handbook appeared forty years ago has anything like this come on the market. This book represents a comprehensive, thorough and up-to-date clinically oriented textbook on ocular pathology. We are all indebted to the senior author, who is now professor of ophthalmology at the University of Erlangen, who presents us here with the fruit of decades of industrious endeavors. We also have to be grateful to the American ophthalmic pathologist, Dr. David Apple, who, as one of the main collaborators of the German edition, has now provided us with the English translation. The book has a twofold purpose: First, it is meant to be a source of instruction for ophthalmologists and pathologists. For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures. Most valuable from a didactic point of view are the colored schematic drawings and the many tables. These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology.

Eye Pathology

Eye Pathology: An Atlas and Text is a basic introduction to eye pathology that can be read and mastered during an ophthalmic pathology rotation. In addition, it will serve as a well-illustrated resource for residents who are studying for the OKAP examinations or Board certification in ophthalmology. Completely written and illustrated by Dr. Eagle, this single-author text is primarily designed for ophthalmology residents and the comprehensive ophthalmologist not looking for a comprehensive text on the subject.
