This is the first ever monumental and scientific documentation of the faunal wealth of the Indian Desert state of Rajasthan. This volume, the first of two, provides background on Rajasthan and covers species diversity and distribution of fauna. A scholarly contribution to the field of knowledge, it provides novel and vital information on the vertebrate faunal heritage of India's largest state. Broadly falling under the Indo-Malaya Ecozone, the three major biomes of Rajasthan include deserts and xeric shrublands, tropical and subtropical dry broadleaf forests, and tropical and subtropical moist broadleaf forests. The corresponding ecoregions to the above biomes are, respectively, the Thar Desert and northwestern thorn scrub forests, the Khathiar-Gir dry deciduous forests, and the Upper Gangtic Plains moist deciduous forests. Contrary to popular belief, the well-known Thar or Great Indian Desert occupies only a part of the state. Rajasthan is diagonally divided by the Aravalli mountain ranges into arid and semi-arid regions. The latter have a spectacular variety of highly diversified and unique yet fragile ecosystems comprising lush green fields, marshes, grasslands, rocky patches and hilly terrains, dense forests, the southern plateau, fresh water wetlands, and salt lakes. Apart from the floral richness, there is faunal abundance from fishes to mammals. In this volume, the various flagship and threatened species are described in the 24 chapters penned by top notch wildlife experts and academics. The world famous heronry, tiger reserves, wildlife sanctuaries and some threat-ridden biodiversity rich areas shall certainly draw the attention of readers from around the world.

This book explores the role of in silico deployment in connection with modulation techniques for improving sustainability and competitiveness in the agri-food sector; pharmacokinetics and molecular docking studies of plant-derived natural compounds; and their potential anti-neurodegenerative activity. It also investigates biochemical pathways for bacterial metabolite synthesis, fungal diversity and plant-fungi interaction in plant diseases, methods for predicting disease-resistant candidate genes in plants, and genes-to-metabolites and metabolites-to-genes approaches for predicting biosynthetic pathways in microbes for natural product discovery. The respective chapters elaborate on the use of in situ methods to study biochemical pathways for bacterial metabolite synthesis; tools for plant metabolites in defence; plant secondary metabolites in defence; plant growth metabolites; characterisation of plant metabolites; and identification of plant derived metabolites in the context of plant defence. The book offers an unprecedented resource, highlighting state-of-the-art research work that will greatly benefit researchers and students alike, not only in the field of agriculture but also in many disciplines in the life sciences and plant sciences.

Microbial Products: Applications and Translational Trends offers complete coverage of the production of microbial products, including biopolymers, biofuels, bioactive compounds, and their applications in fields such as bioremediation, agriculture, medicine, and other industrial settings. This book focuses on multiple processes including upstream procedures and downstream processing, and the tools required for their production. Lab-scale development processes may not be as efficient when aiming for large-scale industrial production, so it is necessary to utilize in silico modeling tools for bioprocess design to ensure success at translational levels. Therefore, this book presents in silico and mathematical simulations and approaches used for such applications. Further, it examines microbial

products produced from bacteria, fungi, and algae. These major microbial categories have the capacity to produce various, diverse secondary metabolites, bioactive compounds, enzymes, biopolymers, biofuels, probiotics, and more. The bioproducts examined in the book are of great social, medical, and agricultural benefit, and include examples of biodegradable polymers, biofuels, biofertilizers, and drug delivery agents. Presents approaches and tools that aid in the design of eco-friendly, efficient, and economic bioprocesses. Utilizes in silico and mathematical simulations for optimal bioprocess design. Examines approaches to be used for bioproducts from the lab scale to widely applied microbial biotechnologies. Presents the latest trends and technologies in the production approaches for microbial bio-products manufacture and application. This book is ideal for both researchers and academics, as it provides up-to-date knowledge of applied microbial biotechnology approaches for bio-products.

I am pleased to introduce the English edition of Inorganic Chemistry for B.S.c. Part-I students. Since long I had been asked to do so, people even used to say me that I treat the English medium students as my step children, that's why I am not thinking about them. But due to one or the other thought in my mind, the conditions and circumstances surrounding me did not allow me to do this. But this time with the grace of God and blessings of "Maa Saraswati" I could do so and attempted to give this first English edition. I hope teachers and students will appreciate my effort and give me full support and suggestions to improve it. Salient Features of the Book : • The book is strictly according to the syllabus. • The fundamental points have been made clear for the students. • Diagrams are very clear & labelled and in addition to the casual diagrams few imaginary diagrams also have been given to make the subject clear. • So many solved and unsolved numerical problems with answer have been given especially those numericals are given which have appeared in the examination papers of various universities. • In the end of every chapter important points to be remembered are given which will help the students

to revise the chapter at a glance. • The quality of paper, printing and binding of the book is excellent • Above all the language of the book is very simple so that even an average student can easily grasp it.

Fostering Innovation in Venture Capital and Startup Ecosystems

It is a matter of great pleasure for me to introduce this English edition of Physical Chemistry book for B.Sc. first year students. It was a great challenge for me to complete three books in one year, but with the grace of God and good wishes of my students, colleagues, friends, relatives and family members that I could complete this task. The book is better than the other available books in the market mainly due to the following points : The syllabii of all the universities of Rajasthan have been obeyed word-to-word. The matter given is sufficient, neither any part of syllabii is left nor any extra matter is given until and unless it is very essential. In addition to the traditional diagrams few basic and imaginary diagrams also have been introduced to make the subject clear. For biology students many calculations have been simplified, so many important numericals are given as solved examples and for practice many numericals of similar kind are given under the heading 'Solve Yourself'. The most important feature of this book is its language, the language is so simple that even very ordinary student can understand it easily, remember and reproduce. During writing of this book every moment there was an innocent student in our mind who has just left the school and entered the college, who has to read so many books, remember them and reproduce in the examination answer book, so the whole matter is precise and simplified.

The present era of complexity, anxiety and moral turpitude is in need of spiritual solace and God's grace more than ever before. The established frameworks of religion have not entirely been successful in streamlining the rapport between the maker and the creation. The emergence and progression of bhakti saints is a significant power in this direction. Living exemplary, realised lives on their own terms mostly in opposition to the given frame of life, the bhakti saints heralded a new possibility of the egalitarian order without any bigotry or dogmatism. The book undertakes a probe into the specific contributions made by two hitherto neglected sections of the Indian society, namely women and Sudras. The precepts and lives of these subaltern saints reiterate the possibility of personal salvation and social regeneration, having transformative potential for breaking the barriers of iniquitous, hierarchical structures.

This double-volume work focuses on socio-demographics and the use of such data to support strategic resource management and planning initiatives. Papers go beyond explanations of methods, technique and traditional applications to explore new intersections in the dynamic relationship between the utilization and management of resources, and urban development. International authors explore numerous experiences, characteristics of development and decision-making influences from across Asia and Southeast Asia, as well as recounting examples from America and Africa. Papers propound techniques and methods used in geographical research such as support vector machines, socio-economic correlates and travel behaviour analysis. In this volume the contributors examine cutting-edge theories explaining diversity and dynamics in urban development. Topics covered include human vulnerability to hazards, space and urban problematic, assessment and evaluation of regional urban systems and structures and urban transformations as a result of structural change, economic development and underdevelopment. The significance of these topics lie in the pace and volume of change as is happening in geography reflecting continued development within established fields of inquiry and the introduction of significantly new approaches during the last decade. Readers are invited to consider the dynamics of spatial expansion of urban areas and economic development, and to explore conceptual discussion of the innovations in and challenges on urbanization processes, urban spaces themselves and both resource management and environmental management. Together, the two volumes contribute to the interdisciplinary literature on regional resources and urban development by collating recent research with geography at its core. Scholars of urban geography, human geography, urbanism and sustainable development will be particularly interested in this book.

This anthology, 'History and Myth: Postcolonial Dimensions', seeks to interrogate and dismantle the colonially structured symmetrical interpretations of the histories and mythological narratives of the former European colonies through depolarization, pluriversality, and border thinking. Here, the concepts of history and myth have been addressed from different perspectives and spatiotemporal zones by scholars from different parts of the world, which add to the global value of the book. It has been argued in this volume that the understanding of postcolonial histories and myths in the contemporary era is highly influenced by the colonially fashioned binaries: valid/ invalid, civilized/barbaric, inclusive/exclusive, relevant/irrelevant, good/bad, etc., which continue to preserve the epistemic citadels of coloniality and selectively promote such historical and mythological narratives that celebrate the superiority of the Global North and the inferiority of the Global South. This book will be of particular interest to scholars, researchers, teachers, and those interested in understanding history, postcolonial studies, decolonial studies, cultural studies, literature, and sociology.
