Microeconomics and Behaviour: South African Edition

EBOOK: Microeconomics and Behaviour: Second South African edition

EBOOK: Microeconomics and Behaviour: Second South African edition

This text covers the topics of intermediate microeconomics in South Africa while exploring the relationship between economic analysis and human behaviour. A clear narrative, a wide variety of Southern African examples and applied practical problems help students learn how to think like economists and apply economics in business and life.

Microeconomics and Behaviour

Exploring the relationship between human behaviour and economic analysis, Microeconomics and Behaviour establishes the fundamentals of intermediate microeconomics in a clear and narrative style and develops economic intuition about the world around us. The text continually encourages the reader to think like an economist through the development of core analytical tools and economic naturalist examples

EBOOK: Microeconomics and Behaviour

A comprehensive introduction to micro-economics in general, this book is set against a contemporary South African background. Straightforward language, practical examples and numerous graphs illustrate the theory in this textbook and make it especially accessible for distance learners.

Microeconomics and Behaviour

This South African edition of Microeconomics is essential reading for all students taking introductory economics modules on undergraduate courses throughout South Africa. It is also ideal for use with the microeconomics component of MBA courses. The text contains updated case studies, set against a South African context to illustrate how the principles of economics relate to your life. The news articles are based on news events in South Africa along with questions to help you apply your knowledge and to build your understanding. This text is designed to give you the confidence and ability to think like an economist.

Microeconomics

This dedicated South African edition of Prof. N. Gregory Mankiw and Prof. Mark P. Taylor’s Economics combines up-to-date South African content and examples with a robust conceptual understanding of the subject using contemporary approaches to theory.The edition retains the features which have made the title so popular with students and instructors, including:The classic ten principles approach to economics – introduced in Chapter One and then referred to throughout the book designed to help build a framework for understanding.A rigorous emphasis throughout on ‘thinking like an economist’ – adopting the tools, methods and concepts economists use in addressing problems and issues.The main body of the text has been expertly tailored to South African students, encouraging them to apply the information and data supplied to their own environment and experiences.

Microeconomics SA 2e

Economics by van Rensburg, McConnell and Brue is an adaptation of the USA's market leading text, designed specifically for Southern African students. Taking the core principles of Economics, the author weaves regionally specific content and examples throughout to help bring relevance and application to the main theories. Combining Southern African content with a straightforward and accessible writing style, this book promises to help promote understanding of economics for all students.

Microeconomics

South Africa's peaceful transition to democracy has gained it world recognition. This book gives a frank report on contemporary South African society and the challenges which the new nation faces. Sixteen social scientists, experts in fields as wide-ranging as economics, politics, and development planning, have compiled a social report on South Africa two years into democracy. The volume covers critical concerns which impact on the well-being of the average South African. The dozen chapters in the book present facts and figures as well as in-depth commentary on social issues which South Africa must address. The authors discuss the legacies of the past, including poverty and social inequality; problems of transition ranging from trauma to crime; and the hopes for the future which lie in economic growth and development, a deeper understanding of democracy, and a healthy dose of optimism. The book draws on information from a wide variety of sources including government statistics, independent social surveys, community research, and opinion polls. This rich data weaves a tapestry of the quality of life in South Africa for Africa watchers and the general public.

EBOOK: Economics, South African Edition

Economics for South African Students

Economics studies how people, businesses and governments use resources. What shapes our decisions? How do we allocate goods and services? What does a rational choice look like? In this third edition of Economics: A Southern African Context, the authors expertly guide us through the key principles of economics, providing a solid foundation in the subject. The text combines relevant Southern African examples with a clear and accessible narrative. By encouraging critical engagement with economic theories, it provides a basis for examining today’s economic, social, and political issues. Key Features: •A new structure to refocus the book and align with teaching •Additional online chapters, including the Economics of Pandemics, available in Connect® •Fully updated pedagogy, including Interactive Graphs, Last Word, and Quick Quiz boxes •Discussions on new developments in economics, such as the consequences of COVID-19 and the impact of BRICS membership on trade in South Africa •Revised end-of-chapter content to test comprehension, including Review Questions, Discussion Questions and Problems, available in Connect® Economics: A Southern African Context is available with McGraw Hill's Connect®, the online learning platform which features resources to help faculty and institutions improve student outcomes and course delivery efficiency. Jan J. Janse van Rensburg is a lecturer at the University of Pretoria. His main area of interest is in teaching and course development with a focus on Principles of Economics. He also specializes in Health Economics, concentrating on the economic effects and costs of substance abuse. Campbell R. McConnell was a professor at the University of Nebraska-Lincoln, where he taught from 1953 until his retirement in 1990. Stanley L. Brue is a professor at Pacific Lutheran University, where he has been honoured as a recipient of the Burlington Northern Faculty Achievement Award. Sean M. Flynn is an associate professor of economics at Scripps College in Claremont, California.

Economics

Microeconomics presents a complete discussion of microeconomic theory for those students who wish to gain an intermediate knowledge of the subject, but it is written in such a way that it is accessible to anyone who has no previous knowledge of microeconomics. A non-mathematical approach is used to explain basic principles as well as more advanced study material. The models are explained by means of diagrams. Theoretical analysis is done in explicit language and to the point discussions, and is augmented with practical examples and explanations. The attractive and functional layout makes the material clear and unintimidating. Each chpater is summarised and includes model questions.

Quality of Life in South Africa

Economics for South African Students

Understand economics in a South African context Economics: Global and Southern African Perspectives, 3rd edition brings together the expertise and perspective of Parkin's internationally renowned textbook with local examples, knowledge and context to create an invaluable learning aid. Packed with features to enhance understanding of core concepts, the text reflects modern issues like inflation, youth unemployment and the effects of political shocks on the South African rand. This edition seeks to change the way you see the world around you, opening your eyes to the 'economic way of thinking.' Updated with South African data and rand equivalents, the text includes study problems and applications that have been adapted to reflect the environment and context of South Africa. Packed with a range of features to support your development, this is the ideal book for university students learning core principles of micro- and macroeconomics.

Black Advancement in the South African Economy

The Southern Africa region has experienced more than its fair share of problems in recent years. Just when it seemed that the hardships wrought by the devastating cycle of droughts and floods of 2000 to 2002 were a thing of the past, other problems emerged. At one level, there have been the weak and often erratic governance mechanisms and political crises in some countries of the region, leading to severe disruptions in agricultural production to the point that supplies and markets have virtually disappeared. At another level, socio-cultural rigidities have often militated against the adoption of efficient farming practices, resulting in sub-optimal choices that lock smallholders into a low equilibrium trap. In the face of the disappearing supplies and missing markets, these have engendered hyper-inflationary trends of a magnitude unknown anywhere else in the world. But in the midst of all this apparent dreariness, cases are emerging from which immense lessons can be drawn. This book assembles a collection of research papers based on studies completed in 2008 and 2009 in Southern Africa that examine various dimensions of the institutional constraints small farmers are facing in the region and how they are going about dealing with them. The papers draw from these diverse and polar experiences and present some theoretical and practical insights that should form the basis for more in-depth, country-level, sector-specific analyses, focusing mainly on citrus, horticultures, cotton and livestock. The thematic issues of income inequality, land reform, natural resource management and value chain governance and chain choice, are covered in this book and are expected to be of interest for a wide constituency, including researchers, development practitioners, rural animators, and policy makers.

Industrial and Development Economics

Leading scholars examine political, legal, social, and market institutions through a microeconomic lens.

EBOOK: Economics, South African Edition

Recession, inflation, interest rates, income tax, exchange rates ... We are bombarded with these terms every day - by newspapers, the radio, TV and the internet - but what do they actually mean? And how do they impact on you? In this updated edition of Everyone’s Guide to the South African Economy, all these issues - and more - are addressed. The book clearly explains and evaluates a wide range of economic occurrences - from the budget and the rand/dollar exchange rate to the balance of payments and the role of the South African Reserve Bank. The book investigates the causes and consequences of the 2008/2009 global financial and economic crisis, looks at the sub-Saharan African economy, and explores human development issues in South Africa and their implications for policy-making. If you are baffled by the specialised jargon of economists and bankers and want to know more about the economic forces that subtly dictate your day-to-day existence, Everyone’s Guide to the South African Economy will put you in the picture. This is essential reading for every South African consumer and taxpayer. Economics, after all, is too important to be left to economists.

EBOOK: Economics: A Southern African Context, 3e

We must look beyond the now, the current economy on our doorstep, and ... reach out to a humanity that lies dormant in all of us. While the depth and sophistication of South Africa's financial and capital markets are lauded by indices the world over, South Africa is also considered to be the most unequal society in the world. The Economy On Your Doorstep probes the reasons for this tragic paradox of South African life and tries to go through and beyond the graphs, margin calls, trading updates, indices and earnings reports to explain how economic 'actions' frame the lives of South Africans in a transitional society faced with the challenges of unemployment, poverty and inequality. The economy is and always has been primarily about people. How they live, what they produce, under what conditions and what social, political and environmental factors influence decisions of consumption, investment and distribution, and how they act under conditions of uncertainty, scarcity, need and crisis. After all, economies are about people coming together to produce, exchange, distribute and consume goods and services that emerge from their communities and those of others. How and under what conditions can we ensure the expansion of our productive forces, while expanding access to the base of assets, services and support that allow for the social reproduction of our entire society and workforce? Ayabonga Cawe outlines some key areas that can and should define a policy agenda towards a 'people's economy' in South Africa and the long-term objectives of such a policy programme, and engages with the political economy of 21st century South Africa through an analysis of a few selected areas of the economy and the implications of this for policy action. This is what this book is about, an exposition of what we see around us and an explanation and discussion of possible ways beyond it. In this well-researched book, Ayabonga Cawe, a development economist, columnist and broadcaster, makes sense of the post-apartheid political economy through the lives of the many people who live and survive in it every day.

Microeconomics

Incorporating the latest results from behavioral economics and microeconomic theory, Samuel Bowles argues that conventional economics has mistakenly presented inequality as the price of progress. In place of this view, he offers a novel and optimistic account of the possibility of a more just economy.

Macro-Economics

For a long time, economic research on Africa was not seen as a profitable venture intellectually or professionally-few researchers in top-ranked institutions around the world chose to become experts in the field. This was understandable: the reputation of Africa-centered economic research was not enhanced by the well-known limitations of economic data across the continent. Moreover, development economics itself was not always fashionable, and the broader discipline of economics has had its ups and downs, and has been undergoing a major identity crisis because it failed to predict the Great

Recession. Times have changed: many leading researchers-including a few Nobel laureates-have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it. They have been amply rewarded: the richness, complexities, and subtleties of African societies, civilizations, rationalities, and ways of living, have helped renew the humanities and the social sciences-and economics in particular-to the point that the continent has become the next major intellectual frontier to researchers from around the world. In collecting some of the most authoritative statements about the science of economics and its concepts in the African context, this lhandbook (the first of two volumes) opens up the diverse acuity of commentary on exciting topics, and in the process challenges and stimulates the quest for knowledge. Wide-ranging in its scope, themes, language, and approaches, this volume explores, examines, and assesses economic thinking on Africa, and Africa's contribution to the discipline. The editors bring a set of powerful resources to this endeavor, most notably a team of internationally-renowned economists whose diverse viewpoints are complemented by the perspectives of philosophers, political scientists, and anthropologists.

Leading Issues in South African Macroeconomics

Taking South Africa as an important case study of the challenges of structural transformation, Structural Transformation in South Africa offers a new micro-meso level framework and evidence linking country-specific and global dynamics of change, with a focus on the current challenges and opportunities faced by middle-income countries. Detailed analyses of industry groupings and interests in South Africa reveal the complex set of interlocking country-specific factors which have hampered structural transformation over several decades, but also the emerging productive areas and opportunities for structural change. The structural transformation trajectory of South Africa presents a unique country case, given its industrial structure, concentration and highly internationalized economy, as well as the objective of black economic empowerment. Structural Transformation in South Africa links these micro-meso dynamics to global forces driving economic, institutional and social change. This include digital industrialization, global value chain consolidation, financialization, environmental and other sustainability challenges, which are reshaping structural transformation dynamics across middle-income countries like South Africa. While these new drivers of change are disrupting existing industries and interests in some areas, in others they are reinforcing existing trends and configurations of power. The book analyses the ways in which both the domestic and global drivers of structural transformation shape-and, in some cases, are shaped by-a country's political settlement and its evolution. By focusing on the political economy of structural transformation, the book disentangles the specific dynamics underlying the South African experience of the middle-income country conundrum. In so doing, it brings to light the broader challenges faced by similar countries in achieving structural transformation via industrial policies.

Economics Global & Southern African Perspective

Bowles and Halliday capture the intellectual excitement, analytical precision, and policy relevance of the new microeconomics that has emerged over the past decades. Drawing on themes of the classical economists from Smith through Marx and 20th century writers - including Hayek, Coase, and Arrow - the authors use twenty-first century analytical methods to address enduring challenges in economics. The subtitle of the work - Competition, conflict, and coordination - signals their focus on how the institutions of a modern capitalist economy work, introducing students to recent developments in the microeconomics of credit and labor markets with asymmetric information, a dynamic analysis of how firms compete going beyond price taking, as well as bargaining over the gains from exchange, social norms, and the exercise of power. The new benchmark model proposed by Bowles and Halliday is based on an empirical approach to economic actors and problems. They start from the premise that contracts are incomplete, and that as a result market failures, rather than being a special case illustrated by environmental spillovers, are to be expected in markets for labor, credit, knowledge and throughout the economy. They explain how experiments show that human motivations include ethical as well as other-regarding preferences (rather than entirely self-interested) and explain why the technologies of knowledge-based economies are a source of winner-take-all rather than stable competition. The authors also consider the intrinsic limits of mechanism design and governmental interventions in the economy. Teaching recent developments in microeconomic theory allows the authors to provide students with the tools to analyze and engage in informed debate on the issues that concern them most: climate change, inequality, innovation, and epidemic spread. Tradeoffs are highlighted by providing models in which capitalism can be seen as an "innovation machine" that raises material living standards on average, while at the same time sustaining levels of inequality that many find to be unfair. Digital formats and resources This title is available for students and institutions to purchase in a variety of formats and is supported by online resources. The e-book offers a mobile experience and convenient access to a variety of features that offer extra learning support. It allows students to engage in self-assessment activities, watch video material that further explains figures and mathematics, and offers the opportunity to work with interactive graphs to understand how the models work. Drawing on the authors' decades of teaching the new microeconomics, this title is supported by a range of online resources for students and lecturers including multiple-choice-questions with instant feedback, further mathematical and discussion-based questions, a fully customizable test bank for lecturer use, PowerPoint slides to accompany each chapter, worksheets that can be assigned to the class, and answers to the problems set in the book.
