Recognizing Gifted Students: A Practical Guide For Teachers

By watching for certain behaviors and characteristics, teachers in the general education classroom can identify and better understand exceptional students (Manning 2006).

"Gifted" is used to indicate high intellectual or academic ability, and "gifted education" is recognized as the educational field devoted to the study of this student population.

Gifted students routinely exhibit academic and emotional traits that may be described as intense and, at times, even extreme.

(Clark 2002) defined "gifted" as a label for the biological concepts of superior development of various

brain functions.

One key way classroom teachers can broaden understanding of gifted students is through knowledge of the general characteristics intellectually gifted children exhibit.

General cognitive characteristics of intellectually gifted students. Notice that gifted students often possess an intense desire to learn about their own interests.

characteristics of gifted students can further help teachers understand many of the classroom behaviors they observe in these children.

Because of the unique characteristics gifted students possess, teachers need to be aware of the ways in which these attributes manifest themselves

Some behaviors can be troubling to the classroom teacher.
