Entrepreneurship, Innovation, and Economic Development

Three sets of questions are addressed.

Entrepreneurship and Economic Development

Leading international scholars provide a timely reconsideration of how and why entrepreneurship matters for economic development, particularly in emerging and developing economies. The book critically dissects the evolving relationship between entrepreneurs and the state.

Entrepreneurship, Innovation and Regional Development

Entrepreneurship and innovation are arguably the main drivers of economic development today. This book explores the two in depth, at both the national and regional levels, using a variety of methodologies. The expert contributors discuss the subject from a policy perspective, with case studies from a host of countries including new member states of the EU as well as established EU member states. Split into three parts, the book focuses on: innovation, entrepreneurial activity and regional development, and entrepreneurship and SME policy.

Sustaining Entrepreneurship and Economic Growth

Academic research on developed countries has scientifically evaluated the role of entrepreneurship on economic growth, market expansion, commercializing innovation, and reducing unemployment. In this research, regions or industries with higher rates of entrepreneurship show higher levels of innovation and economic growth. The literature on entrepreneurship and innovation has largely ignored developing countries, despite the positive results from new venture investments in India, China, and elsewhere. This volume bridges this gap by bringing together research by scholars in Germany and India, whose analysis of entrepreneurship, innovation, and economic development in their respective countries reveals commonalities. Covering such timely issues as R&D and labor policies and including case examples from the chemical, biotech, and IT industries, the authors offer insight into the entrepreneurial process. The volume concludes with a discussion of the global implications for entrepreneurship research and policy.

Entrepreneurship, Innovation and Regional Development

Entrepreneurship, Innovation and Regional Development is unique in that it addresses the central factors in economic development – entrepreneurship, innovation and organizational learning – as regional phenomena. This definitive text focuses on different types of organizations to illustrate the value of entrepreneurship and innovation both for businesses and for regional development. Establishing a firm link between entrepreneurship, innovation and economic regeneration, the book also examines the factors contributing to their success. Replete with international case studies, empirical evidence of concepts and practical examples, this is an ideal text to support postgraduate teaching and research related to entrepreneurship, innovation management and regional economic development.

Innovation, Entrepreneurship and Culture

The purpose of this book is to examine the nature of organizational innovation and change by looking at the complex interplay between entrepreneurship, innovation and culture.

Entrepreneurship, Innovation and Economic Crisis

This book looks at entrepreneurship and innovation as ways out of the economic crisis in Europe and other regions, and examines the main theoretical issues and practices related to this analysis. The volume addresses such questions as: From an institutional perspective, how do economic crisis conditions affect different types of entrepreneurs and entrepreneurship? Is it useful for public policy-makers and entrepreneurs to understand the basic characteristics of entrepreneurial activity, relations between the institutional environment and entrepreneurship and among entrepreneurship, innovation and social change? Featuring case studies from several industries and countries, and a variety of methodological, theoretical, and empirical approaches, the authors build a compelling narrative on the dynamics of entrepreneurship and innovation as drivers of economic growth and organizational renewal. They demonstrate that the strategic and operational relationships that entrepreneurship creates within and outside the enterprise are a fundamental route for leading and mobilizing economic and social resources that permit innovation at the organizational level and in relationships with suppliers, customers, and other stakeholders - in turn, enabling technological innovation, creating new revenue streams through new productive activities and new demand, and ultimately facilitating emergence from economic crisis. The authors consider social, gender, and generational aspects of entrepreneurship, as well as the institutional conditions necessary to promote entrepreneurial activity.

The Role of Innovation and Entrepreneurship in Economic Growth

"Innovation and entrepreneurship are ubiquitous today, both as fields of study and as starting points for conversations among experts in government and economic development. But while these areas on continue to attract public and private investments, many measurements of their resulting economic

growth-including productivity growth and business dynamism-have remained modest. Why this difference? Because not all business sectors are the same, and the transformative gains of some industries have been offset by stagnation or contraction in others. Accordingly, a nuanced understanding of the economy requires a nuanced understanding of where innovation and entrepreneurship occur and where they matter. Answering these questions allows for strategic public investment and the infrastructure for economic growth. The Role of Innovation and Entrepreneurship in Economic Growth, the latest entry in the NBER conference series, seeks to codify these answers. The editors leverage industry studies to identify specific examples of productivity improvements enabled by innovation and entrepreneurship, including those from new production technologies, increased competition, new organizational forms, and other means. Taken together, the volume illuminates whether the contribution of innovation and entrepreneurship to economic growth is likely to be concentrated, be it selected sectors or more broadly"--

Entrepreneurship, Innovation and Economic Growth

This is a groundbreaking economic analysis of entrepreneurship and the development process for innovation. The author strives to distinguish the role of the capitalist from that of an entrepreneur, and to show how the actions of the entrepreneur impact new employment, economic growth, and advancements in the overall standard of living. The book provides in-depth discussion of several critical concepts: the economic development of a product; Schumpeter's "temporary monopoly control;" the economic bounds of product and process innovations; and changing production functions. It also develops and integrates an analysis of how innovation-induced modifications in either products or processes affect both short-run and long-run average costs in production. As a special feature, each chapter includes an interview with a successful entrepreneur. Suggested readings are also provided.

Entrepreneurship and Innovation: An Economic Approach

Entrepreneurship, Growth and Innovation provides comprehensive insight into the economics of entrepreneurship, claiming that this recently established discipline should establish a framework of analysis that integrates the understanding of the determinants and the effects of both entrepreneurship and innovation without neglecting the functioning of the inducement mechanisms. For this purpose, the book combines theoretical prescriptions and international empirical evidence. Contributions by some of the best known scholars in the field of the economics of entrepreneurship and innovation investigate whether the interrelationships between the forces that affect firm and industry dynamics and ultimately determine economic growth are subject to change across countries and over time. The analysis of different national cases puts forward that the relationship between entrepreneurship and growth via innovation is shaped by the context of country-specific institutions and industries, thereby providing hints for industrial and innovation policy.

Entrepreneurship, Growth, and Innovation

This book looks at entrepreneurship and innovation as ways out of the economic crisis in Europe and other regions, and examines the main theoretical issues and practices related to this analysis. The volume addresses such questions as: From an institutional perspective, how do economic crisis conditions affect different types of entrepreneurs and entrepreneurship? Is it useful for public policy-makers and entrepreneurs to understand the basic characteristics of entrepreneurial activity, relations between the institutional environment and entrepreneurship and among entrepreneurship, innovation and social change? Featuring case studies from several industries and countries, and a variety of methodological, theoretical, and empirical approaches, the authors build a compelling narrative on the dynamics of entrepreneurship and innovation as drivers of economic growth and organizational renewal. They demonstrate that the strategic and operational relationships that entrepreneurship creates within and outside the enterprise are a fundamental route for leading and mobilizing economic and social resources that permit innovation at the organizational level and in relationships with suppliers, customers, and other stakeholders- in turn, enabling technological innovation, creating new revenue streams through new productive activities and new demand, and ultimately facilitating emergence from economic crisis. The authors consider social, gender, and generational aspects of entrepreneurship, as well as the institutional conditions necessary to promote entrepreneurial activity.

Entrepreneurship, Innovation and Economic Crisis

While the public policy community has turned to entrepreneurship to maintain, restore, or generate economic prosperity, the economics profession has been remarkably taciturn in providing guidance for public policy for understanding the links between entrepreneurship and economic growth as well as for framing and weighing policy issues and decisions. The purpose of this volume is to provide a lens through which public policy decisions involving entrepreneurship can be guided and analyzed. In particular, this volume provides insights from leading research concerning the links between entrepreneurship, innovation, and economic growth that shed light on implications for public policy. The book makes clear both how and why small firms and entrepreneurship have emerged as crucial to economic growth, employment, and competitiveness as well as the mandate for public policy in the entrepreneurial society.

Advances in the Study of Entrepreneurship, Innovation, and Economic Growth

Entrepreneurship is now unanimously considered a major engine for socio-economic development, mainly because it creates jobs and innovation. Governments around the world pay special attention to removing entrepreneurial barriers in order to support development via different policies, especially entrepreneurial finance. Developing, emerging and transition economies (DETEs) significantly differ from industrialized countries because of their specific conditions: institutions, infrastructure facilities, and bureaucratic procedures within the administrative system. Thus, firms and their entrepreneurs in and from DETEs may behave differently, particularly in terms of their financial strategies. Therefore, contextualizing is critical to better understand the relationship between entrepreneurial finance, innovation, and development in DETEs. This book provides a systematic and profound understanding of how finance, entrepreneurship, innovation, and their interactions contribute to economic development in DETEs, which cover a large number of countries in Asia, Central and Eastern Europe, Latin America, and Africa. The book mainly includes empirical studies and is divided into four parts. Part A includes four chapters which adopt a multinational approach to examine different sources and types of finance for entrepreneurship and small business in different groups of countries classified as DETEs. Part B also includes four chapters and focuses on entrepreneurial finance in specific countries belonging to the DETEs. Part C goes beyond the business scope of entrepreneurial finance and includes three chapters concerned with the relationship between finance, women's entrepreneurship, and poverty. Part D includes three chapters focusing on the comparison within developing countries as well as between developing and developed countries. This essential and comprehensive resource will find an audience amongst academics, students, educators, and practitioners, as well as policymakers and regulators.

Entrepreneurship, Growth, and Public Policy

The aim of this book is to analyze the relationships among entrepreneurship, regional development and culture in the current economy. Using an institutional approach, it examines the main theoretical issues and practices and their effect on different dimensions of society and the economy. Business creation is considered a key element of economic growth, innovation and employment. In recent years, entrepreneurial scholars have studied the factors that affect entrepreneurship and drive economic growth. In doing so, these scholars have aimed to understand what promotes entrepreneurial activity and also how to improve the development of regions or countries to increase wealth in society. The institutional approach can be applied to the entrepreneurship field to understand the phenomenon of entrepreneurship. This view considers the role of environment in the decision to create a company, which is critical to entrepreneurship, innovation and economic growth. Environment relates to legal aspects, public policy and support services (formal institutions) but is especially important in terms of sociocultural context (informal institutions). The creation of new ventures is greatly influenced by culture. Furthermore, it is important to highlight the influence of entrepreneurship on regional development, specifically through job creation, stimulation of economic growth and innovation. Thus, entrepreneurship, regional development and culture are fundamental for understanding economic growth and development as well as other phenomena such as technology transfer or women's entrepreneurship. Featuring contributions and cases studies from various countries and sectors, this volume provides an essential reference for scholars, academics, and researchers in entrepreneurship, business management, innovation and economics.

Entrepreneurial Finance, Innovation and Development

We have, in recent decades, been able to witness a veritable revolution in the world economy, known as 'globalization'. Generally, the term is connected to the rapid increase of the free movement of goods, capital, people, ideas, information and knowledge around the globe. This book contributes to the meso- and micro-economic literature on innovation and entrepreneurship in the global economy.

Entrepreneurship, Regional Development and Culture

Presents a series of perspectives that evaluate the merits of and potential for establishing institutionalized social valuation protocols within university settings. This title offers a comprehensive overview of the literature that addresses issues related to assessing the social value of university innovations.

Innovation and Entrepreneurship in the Global Economy

How much credit can be given to entrepreneurship for the unprecedented innovation and growth of free-enterprise economies? In this book, some of the world's leading economists tackle this difficult and understudied question, and their responses shed new light on how free-market economies work--and what policies most encourage their growth. The contributors take as their starting point William J. Baumol's 2002 book *The Free-Market Innovation Machine* (Princeton), which argued that independent entrepreneurs are far more important to growth than economists have traditionally thought, and that an implicit partnership between such entrepreneurs and large corporations is critical to the success of market economies. The contributors include the editors and Robert M. Solow, Kenneth J. Arrow, Michael M. Weinstein, Douglass C. North, Barry R. Weingast, Ying Lowrey, Nathan Rosenberg, Melissa A. Schilling, Corey Phelps, Sylvia Nasar, Boyan Jovanovic, Peter L. Rousseau, Edward N. Wolff, Deepak Somaya, David J. Teece, Naomi R. Lamoreaux, Kenneth L. Sokoloff, Yochanan Shachmurove, Ralph E. Gomory, Jonathan Eaton, Samuel S. Kortum, Alan S. Blinder, Robert J. Shiller, Burton G. Malkiel, and Edmund S. Phelps.

Entrepreneurship, Innovation and Economic Development

Since the end of the Second World War, Taiwan has transformed in around 60 years time from a farmland to a high tech industrial economy. This book examines entrepreneurship, innovative systems and government policies in Taiwan.

Advances in the Study of Entrepreneurship, Innovation and Economic Growth

This volume, comprised of authors from the U.S., Canada, Africa, and Europe, centers on the development, transformation, and role of geographic /regional economies-- specifically in the globalized, post-2009 era. The authors address topics that every region must consider in responding to idea age, globally competitive, regionally driven economies.

Entrepreneurship, Innovation, and the Growth Mechanism of the Free-Enterprise Economies

This volume presents studies from experts in twelve industries, providing insights into the future role of innovation and entrepreneurship in driving economic growth across sectors. We live in an era in which innovation and entrepreneurship seem ubiquitous, particularly in regions like Silicon Valley, Boston, and the Research Triangle Park. But many metrics of economic growth, such as productivity growth and business dynamism, have been at best modest in recent years. The resolution of this apparent paradox is dramatic heterogeneity across sectors, with some industries seeing robust innovation and entrepreneurship and others seeing stagnation. By construction, the impact of innovation and entrepreneurship on overall economic performance is the cumulative impact of their effects on individual sectors. Understanding the potential for growth in the aggregate economy depends, therefore, on understanding the sector-by-sector potential for growth. This insight motivates the twelve studies of different sectors that are presented in this volume. Each study identifies specific productivity improvements enabled by innovation and entrepreneurship, for example as a result of new production technologies, increased competition, or new organizational forms. These twelve studies, along with three synthetic chapters, provide new insights on the sectoral patterns and concentration of the contributions of innovation and entrepreneurship to economic growth.

Taiwan's Economic Transformation in Evolutionary Perspective

Entrepreneurship, Innovation and Technological Change links the prevalent theory from the entrepreneurship literature concerning opportunity recognition and exploitation to economic theory, in particular the model of the knowledge production function.

Entrepreneurship and Global Competitiveness in Regional Economies

This book hopes to stimulate discussion about how entrepreneurship and innovation contribute to growing inequalities in territories. This will help bridge the gap between research and practice on the role of territory dynamics and regional development. The book begins by examining the growing inequality in regions, which has resulted in lagging economic development. The need to shift current economic policy towards spatial inequality through harnessing the innovative capabilities of regions is examined. The book puts forth a case for reversing the inequality that is evident in lagging regions as a way to reinvigorate territories. The book should appeal to researchers, policy makers, business leaders and the general public interested in territorial dynamics and development.

The Role of Innovation and Entrepreneurship in Economic Growth

"This book focuses on innovations and economic development from the Dubai Emirate. It also examines opportunities and challenges for entrepreneurial activity and non-entrepreneurial engagement in this region"--

Entrepreneurship, Innovation, and Technological Change

This Research Handbook provides a solid foundation for exploring the vibrant field of strategic entrepreneurship, with an examination of important topics from theoretical, psychological and economic perspectives. PhD students, scholars and researchers alike who want to investigate further into strategic entrepreneurship in depth as well as uncharted territories, will find this Research Handbook a valuable resource.

Entrepreneurship, Innovation and Inequality

Entrepreneurship is critical to economic growth, but it cannot flourish without open markets. Entrepreneurs can only be expected to take risks in 'open settings' where individuals and firms are free to contract with one another. In this important book, leading economists explain and document the role of open markets, within and across national boundaries, in facilitating entrepreneurship, innovation, and economic growth. The main message of this book is especially timely given growing concerns in developed countries about off-shoring and openness to trade. The book includes discussions of 'star' scientists-entrepreneurs and their positive impacts on local growth, the globalization of venture capital, information technology, entrepreneurship and cities, culture, off-shoring, trade competition and the expansion of world trade. This book will be welcomed by policy makers at all levels of government, university leaders and academic scholars in entrepreneurship, business and management, innovation, economics, sociology and urban economics.

Entrepreneurial Innovation and Economic Development in Dubai and Comparisons to Its Sister Cities

A fundamental process for a company to achieve stable growth levels over time in a highly competitive economy is the ability to improve, adapt, and overcome a variety of challenges, whether they be internally or externally based. Therefore, being capable of understanding how any operational changes or improvements impact consumers must likewise be taken into consideration. Entrepreneurial Innovation for Securing Long-Term Growth in a Short-Term Economy is a collection of innovative research on the methods and applications of corporate decision making on the overall success of a company in the long term. While highlighting topics including organizational values, trust management, and social entrepreneurship, this book is ideally designed for entrepreneurs, executives, business consultants, researchers, industry professionals, and students who want to improve their understanding of the strategic role of entrepreneurial innovation at different levels defined by globalized markets inserted into the information and knowledge society.

Research Handbook on Strategic Entrepreneurship

The spillovers in knowledge among largely college-educated workers were among the key reasons for the impressive degree of economic growth and spread of entrepreneurship in the United States during the 1990s. Prior 'industrial policies' in the 1970s and 1980s did not advance growth because

these were based on outmoded large manufacturing models. Zoltan Acs and Catherine Armington use a knowledge spillover theory of entrepreneurship to explain new firm formation rates in regional economies during the 1990s period and beyond. The fastest-growing regions are those that have the highest rates of new firm formation, and which are not dominated by large businesses. The authors of this text also find support for the thesis that knowledge spillovers move across industries and are not confined within a single industry. As a result, they suggest, regional policies to encourage and sustain growth should focus on entrepreneurship among other factors.

Entrepreneurship, innovation and economic growth

This book aims to meet the needs of education and training in modern techniques of innovation and entrepreneurship, and focuses on the detailed presentation of successful business practices. As today's global economic landscape is changing rapidly, the ability of businesses to introduce new products and services to the market faster than their competitors is perhaps their most distinct competitive advantage. This becomes obvious by the significant market share that the most innovative companies gain while increasing profitability. Extensive research in this field has demonstrated that companies that are constantly innovating normally double their profits compared to others. Moreover, establishing successful practices and policies of innovation management, through which ideas evolve from conception through evaluation to implementation and commercialization, become the basis for economic growth at the firm, industry, national, regional, and global levels. Taking Greece as an example, this volume identifies systemic weaknesses in development of new products, risk capital, patenting, broadband penetration, lifelong training, investment in research on the part of firms, high-tech exports, and employment in medium-high-technology manufacturing that place the country at the bottom of the European Union in economic performance and threaten its potential to achieve sustainable growth. To address these weaknesses in Greece and similar countries around the world, the authors present a comprehensive overview of the principles of innovation and entrepreneurship, with particular respect to their relationships to knowledge, learning, and creativity. Drawing from a strong theoretical foundation, and illustrated through in-depth case studies and examples from both private and public sectors, the authors present a framework for innovation management that integrates research, education, practical application, and policy. Specific topics include technology transfer, intellectual property rights management, the practice of knowledge management intellectual capital investment, business incubators, and Cooperation Research and Development Agreements (CRADAs).

Entrepreneurship and Openness

In the geography of the global economy, there are known 'hot spots' where new technologies germinate at an astounding rate and pools of capital, expertise and talent foster the development of new industries and new ways of doing business. These clusters

Entrepreneurial Innovation for Securing Long-Term Growth in a Short-Term Economy

This book provides a comprehensive overview of role of entrepreneurship, technology commercialisation and innovation policy for the achievement of economic development and prosperity in African societies. It adopts a broad innovation systems approach. The book examines entrepreneurship, innovation, and technology commercialisation alongside context-specific factors associated with them. It also provides an interdisciplinary perspective, by discussing the above disciplines in a connected way. This book is presented in three distinct parts. It starts by discussing entrepreneurship and the state of the entrepreneurial ecosystem in Africa. It then moves on to present technology commercialisation in Africa, before finally discussing the future directions for entrepreneurship, technology commercialisation and innovation policy. This broad picture provided in the book enables the reader to grasp the relevant messages, whilst the detailed analysis applies world-class theories and frameworks to deepen the readers understanding of key concepts and issues examined.

Entrepreneurship, Geography, and American Economic Growth

This paper provides an overview of the state of the art of the intersection of development economics and entrepreneurship. Given the relative neglect of entrepreneurship by development scholars it deals with (i) recent theoretical insights from the intersection of entrepreneurship and development studies; (ii) the empirical evidence on the relationship between entrepreneurship and development; and (iii) fresh insights for entrepreneurship policy for development that emerges from recent advanced in this area, including female entrepreneurship in developing countries.

Innovation and Entrepreneurship

This edited volume brings together research on symbiotic themes of entrepreneurship, resource planning, and regional development and their impact on global-local business imperatives. Discussions in this volume critically analyze the convergence of entrepreneurship, innovation, technology, business practices, public policies, political ideologies, and consumer values for improving the global-local business paradigm to support regional development. This book also delves into contemporary entrepreneurship models, converging business strategies towards entrepreneurial and industrial alliance in manufacturing, services, and marketing organizations. It contemplates the development of new business models and hybrid entrepreneurial perspectives to match the changing priorities of regional economic development in developing countries. This volume offers scholars new entrepreneurial visions and business perspectives of industries in emerging markets, while presenting a more integrated view to enable companies to innovate for long-term profitability and sustainability.

Global Clusters of Innovation

This book focuses on the nature and role of entrepreneurship in modern developed and emerging economies and societies, its relation to governments and universities, and its role in the often-forgotten informal economy. The aim is to position entrepreneurship in the post-crisis context and explore how its relation to universities and governments contributes to explain the countries' and territories' growth performance and resilience or vulnerability to the crisis. The accent is particularly on processes and patterns at local level and in small and medium-sized enterprises in local economic systems and districts, local systems of innovation, and the types and configurations of innovation these give origin to. With globalization, entrepreneurship has become fundamental for the competitiveness of territories and countries, for policy management and for development. The local dimension is fundamental because of agglomeration economies and effects, the advantages of proximity and the nature of knowledge and information. Furthermore, territories carry to the centre-stage tacit knowledge, localized social capital, embeddedness and interpersonal relations as fundamental components of their endogenous socio-economic development and competitiveness. When local systems are connected in a horizontal network, they contribute to the strength of national and international systems. To play a constructive role from this perspective, entrepreneurship must avoid local entrenchment and support the local economy to upgrade and be competitive. To do this, the entrepreneurs' interaction and alliance with universities and governments is a must for those countries and localities wanting to emerge. This requires that enterprises, universities and governments create synergies and spill-overs to their mutual advantage.

Entrepreneurship, Technology Commercialisation, and Innovation Policy in Africa

Providing a critical overview of existing research and demonstrating the importance of a transdisciplinary framework for studies of innovation and entrepreneurship, this book advances a general concept of 'collective entrepreneurship' that emphasises the social and collaborative nature of innovation and entrepreneurship, thus shedding light on processes of innovation and entrepreneurship as active practices of social construction. As such, it will appeal to scholars of economic sociology, political science, economic geography and economists, as well as those with interests in innovation policy.

Entrepreneurship and Economic Development

In analyzing the complex link between entrepreneurship, innovation and development in the context of the emerging world, this book offers a holistic reading of this triptych based on a theoretical foundation that is itself subject to controversy: the national system of innovative entrepreneurship. The "emerging" nature of the studied countries provides specific insights, and allows the theoretical developments to be fine-tuned to the current issues. In a context that makes competitive advantages transient, emerging markets can provide a real test case for responding in a structural and innovative way

to social and economic challenges, thus ensuring the sustainable performance of their innovative entrepreneurial system. Entrepreneurship and Development advocates for the integration of the social and cultural history of a given country within the framework of public policies, and proposes more targeted actions for innovative entrepreneurial activities. Moreover, the education system must integrate the entrepreneurial culture and foster multidisciplinary to support the transfer of knowledge to markets.

Entrepreneurship and Regional Development

This book addresses the intersection of entrepreneurship, innovation and sustainability (EIS), presenting high-quality research illuminating the relationship between the three fields. The EIS nexus is particularly relevant from a European point of view given the focus of the European Commission on corporate social responsibility (CSR) and sustainability, as well as their prominent role within the European Union in general. Also, the rapid economic growth witnessed especially in the BRIC countries in recent years requires that firms reconcile sustainability aspects with profitability and innovation, and entrepreneurs are seen as key diffusers of these aims. Sustainability requires both radical and incremental innovation at many different levels (technology, product, process, system). In many cases, such innovations come from small and medium-sized enterprises and so the role of the entrepreneur is key to their success. The book is split into six sections. The first section examines the nexus in detail focusing on system-oriented connectivity between sustainability, innovation and entrepreneurship. The second section looks at how to nurture corporate entrepreneurship for sustainability; and the third considers "mature" industries such as automotives, chemicals and electronics and how sustainability aspects can be integrated into innovation process and strategy. The fourth section examines the nexus through the lens of developing countries in Africa. Sustainable entrepreneurship is identified as a hugely beneficial way to foster development. The fifth section of the book concentrates on SMEs; and finally the EIS nexus is approached from a network perspective and focuses on inter-organisational partnerships, which are often an important facilitator or spark for EIS initiatives. This book will prove to be essential for researchers in the EIS nexus and be of invaluable help to practitioners, governments and inter-governmental bodies attempting to encourage sustainable entrepreneurship and innovation.
