Why Presuppositionalists Can't Prove Christianity - Why Presuppositionalists Can't Prove

Christianity by TMM 44,292 views 4 years ago 8 minutes - The whole video:

Presuppositional apologetics is an approach that tries to establish that a god exists a priori, ie. in a way that does not appeal to evidence. Presuppositional apologists insist that the existence of a god must be assumed before any argument can be made, because in order for any argument to be completely reliable, there must be an infallible source of knowledge.

How would that be different from how a Muslim presuppositionalist would argue? Even if you believe that to argue at all is to presuppose some ultimate source of truth, or ultimate ground of evidence, how could you presuppose it to be the Bible rather than the Quran?

First of all, if an idea can be put to human use, it isn't meaningless or purposeless. The idea that dinosaurs existed can effectively be used to explain why fossils are there, and to some degree what future fossil discoveries will look like and where they will be found. That is the idea's meaning and purpose.

In fact, most if not all scientific models are not perfectly true. Noam Chomsky once pointed out that even our most contemporary, sophisticated models of planetary motion don't take into account the gravitational influence of Alpha Centauri, so it doesn't give an absolutely, precisely true picture of the way the solar system works. I don't care.

Well, first of all the soft tissues that have been found in dinosaur bones are also consistent with the idea that they are millions of years old, because it looks as though the iron in hemoglobin can act as a very strong preservative, especially when inside of bone.

How to Draw Human Figures

How to Draw Human Figures Ultimate guide on how to draw people Individuals simply beginning are frequently bewildered by the subject of how to draw individuals. The type of a man wearing garments can be really perplexing and this goes considerably more for the human body itself. We should accept you stay there with a charcoal and an unfilled sheet of drawing paper before you - and in addition a figure of a human with garments. Next, you ponder, where do I begin for the love of God? How would I start? Looking at the figure, the undertaking can appear to be entirely overwhelming. Along these lines, we should begin with an essential standard. Any drawing can be taken back to a couple of segments. On account of a human figure, the body can be isolated into a few sections. Simply solicit yourself, where might the center from the body be? The answer is straightforward: at the waistline. It's vital to get the essential extents right to start with, and not to include point of interest in the first place. Just in the event that you are certain that the extents are about right, would you be able to include (just little) detail later. You can help that procedure considerably shutting your eyes when looking at your model. Along these lines, you concentrate on the wide shapes and not on the points of interest. The accompanying step is to attempt and measure the head from the jaw to the top. The body is around seven times bigger than the head. How about we recap: you ought to now have a blemish on your drawing paper where the base of the feet, the waistline, the button and the highest point of the head are. Presently you can audit them and choose if the extents look alright. Look from your drawing to the figure and back once more. Do it very quick. You will check whether it the extents aren't precisely right. All things considered, transform them. As I said, the whole head is around one seventh of the length of the body. These tenets, coincidentally, ought to be utilized as a fundamental rule just, not any guideline that is cut in stone. Simply look from your drawing to the figure and back once more, and see what's there. That is the way to getting the right estimations. Next, you can make marks for other key parts of the body. Obviously, there are the legs and arms. At the point when the arms are casual, the fingers are approximately five head down and the knees around six, so put marks there. Begin with basic stances: on the off chance that you begin with complex stances you will get dampened quick. Work on drawing individuals with straightforward stances and once you get to be alright with that you will have the capacity to handle more troublesome ones effortlessly. Draw Like an Artist: 100 Faces and Figures

Overflowing with sketches that capture a wondrous repertoire of angles and poses; this is the ultimate guide to drawing people "to life." The author shows the male and the female body from multiple positions; reveals typical proportions; describes each part of the skeleton and each muscle; extensively comments on physical morphology; and offers a plethora of gestures and actions. A unique combination of technique and imagination.

You Will be able to draw faces by the end of this book

With 80 Plates Originally Published between 1828 and 1855 In the nineteenth century students who did not have access to plaster casts and teachers who wished for a course of instruction turned to copy books for drawing lessons. They were popular and many authors produced versions either for

use in schools or for learning at home. This book combines examples from seven different books. The selections focus on those sections of the books devoted to drawing the human figure. The books include: Buchanan's Initiatory Drawing Lessons The Illustrated Drawing Book The Young Artists Assistant in the Art of Drawing A Guide to Figure Drawing Oxford Drawing Book Drawing Lessons for Family and School Systematische Zeichen Schule"

Drawing

This vintage book contains a comprehensive guide to drawing figures, with information and tips on different styles and methods. Drawing the human body has always been one of the chief challenges an artist must face, and many people struggle to portray their subject accurately. This volume walks the reader through the various techniques and methods of representing the human form and is ideal for the budding artist who finds drawing the human figure challenging. Contents include: "The Study of Form," "Drawing in Line," "Drawing by Planes," "Drawing by Contour," "Drawing in Thick Lines," "Drawing based upon Rounded Forms," "Drawing with Colour," "Some Hints on Drawing the Figure from the Model," "The Proportions of the Figure," "The Head and Neck," "The First Lines of the Front View," et cetera. Many vintage books such as this are increasingly scarce and expensive. We are republishing this volume now in an affordable, high-quality edition complete with the original text and artwork.
