HOMO DEUS - Summarized for Busy People

This book summary and analysis was created for individuals who want to extract the essential contents and are too busy to go through the full version. This book is not intended to replace the original book. Instead, we highly encourage you to buy the full version. Yuval Noah Harari, author of the worldwide hit and New York Times bestseller Sapiens, presents another riveting and thought-provoking masterpiece revolving around the future of humankind and its journey in the path to divinity. Throughout the last century, humans have triumphed over the seemingly impossible and have overcome plague, famine, and war. Harari emphasizes that although this is difficult to believe, humankind has indeed successfully reduced plague, famine, and war from unyielding natural forces into manageable predicaments. The fraction of people today that die from communicable diseases is less than of those who die from old age; the mortality rate linked to complications from diabetes, obesity, and heart conditions is less than of those who die from having too little to eat; and the number of casualties of war is less than the total body count for suicide. A question arises: what will become humankind's next project if not finding solutions for plague, famine, and war? Humans have long reigned over the Earth. Now we must choose our next journey and set on a new path to the future. In Homo Deus, Harari investigates what dreams, nightmares, and ventures await us in the twenty-first century—from surmounting death itself to creating godlike beings. Now we must ask ourselves: What will become of humankind? With this much power at our fingertips, how will we protect the world from the self-destructive tendencies of man? We are entering the next part of evolution. We have arrived at the age of Homo Deus. Wait no more, take action and get this book now!

A Book Review of Harari's Homo Deus: A Brief History of Tomorrow

Literature Review from the year 2017 in the subject Literature - Modern Literature, grade: A, University of Auckland, language: English, abstract: Homo sapiens make sense of the world through stories, contextualising consciences in communication and interaction. This was the premise for Yuval Noah Harari's Sapiens: A Brief History of Humankind (2014), looking back at the last 75,000 years of human socio-cultural evolution "to ask big questions and answer them scientifically". In a similar vein, Homo Deus: A Brief History of Tomorrow (2015) looks forward, hypothesising on this growing symbiotic relationship with artificial intelligence (AI) as the next stage of evolution. What we see in the Anthropocene epoch is the writing of history and stories shifting to computational processes, narrated by the user/human but plotted by AI.

A Stranger in the House

Robots are poised to transform today's society as completely as the Internet did twenty years ago. Pulitzer prize-winning New York Times science writer John Markoff argues that we must decide to design ourselves into our future, or risk being excluded from it altogether. In the past decade, Google introduced us to driverless cars; Apple debuted Siri, a personal assistant that we keep in our pockets; and an Internet of Things connected the smaller tasks of everyday life to the farthest reaches of the Web. Robots have become an integral part of society on the battlefield and the road; in business, education, and health care. Cheap sensors and powerful computers will ensure that in the coming years, these robots will act on their own. This new era offers the promise of immensely powerful machines, but it also reframes a question first raised more than half a century ago, when the intelligent machine was born. Will we control these systems, or will they control us? In *Machines of Loving Grace*, John Markoff offers a sweeping history of the complicated and evolving relationship between humans and computers. In recent years, the pace of technological change has accelerated dramatically, posing an ethical quandary. If humans delegate decisions to machines, who will be responsible for the consequences? As Markoff chronicles the history of automation, from the birth of the artificial intelligence and intelligence augmentation communities in the 1950s and 1960s, to the modern-day brain trusts at Google and Apple in Silicon Valley, and on to the expanding robotics economy around Boston, he traces the different ways developers have addressed this fundamental problem and urges them to carefully consider the consequences of their work. We are on the brink of the next stage of the computer revolution, Markoff argues, and robots will profoundly transform modern life. Yet it remains for us to determine whether this new world will be a utopia. Moreover, it is now incumbent upon the designers of these robots to draw a bright line between what is human and what is machine. After nearly forty years covering the tech industry, Markoff offers an unmatched perspective on the most drastic technology-driven societal shifts since the introduction of the Internet. *Machines of Loving Grace* draws on an extensive array of research and interviews to present an eye-opening history of one of the most pressing questions of our time, and urges us to remember that we still have the opportunity to design ourselves into the future—before it's too late.

Machines of Loving Grace

Official U.S. edition with full color illustrations throughout. NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon *Sapiens*, returns with an equally original, compelling, and provocative book, turning his focus toward humanity's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from binging at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? *Homo Deus* explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is *Homo Deus*. With the same insight and clarity that made *Sapiens* an international hit and a New York Times bestseller, Harari maps out our future.

Biomedical research is changing the both the format and the functions of human beings. Very soon the human race will be faced with a choice: do we join in with the enhancement or not? Make Way for the Superhumans looks at how far this technology has come and what aims and ambitions it has. From robotic implants that restore sight to the blind, to performance enhancing drugs that build muscles, improve concentration, and maintain erections, bio-enhancement has already made massive advances. Humans have already developed the technology to transmit thoughts and actions brain-to-brain using only a computer interface. By the time our grandchildren are born, they will be presented with the option to significantly alter and redesign their bodies. Make Way for the Superhumans is the only book that poses the questions that need answering now: suggesting real, practical ways of dealing with this technology before it reaches a point where it can no longer be controlled.

Make Way for the Superhumans

100,000 years ago, at least six human species inhabited the earth. Today there is just one. Us. Homo sapiens. How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations and human rights; to trust money, books and laws; and to be enslaved by bureaucracy, timetables and consumerism? And what will our world be like in the millennia to come? In Sapiens, Dr Yuval Noah Harari spans the whole of human history, from the very first humans to walk the earth to the radical "and sometimes devastating" breakthroughs of the Cognitive, Agricultural and Scientific Revolutions. Drawing on insights from biology, anthropology, palaeontology and economics, he explores how the currents of history have shaped our human societies, the animals and plants around us, and even our personalities. Have we become happier as history has unfolded? Can we ever free our behaviour from the heritage of our ancestors? And what, if anything, can we do to influence the course of the centuries to come? Bold, wide-ranging and provocative, Sapiens challenges everything we thought we knew about being human: our thoughts, our actions, our power ... and our future. 'Here is a simple reason why Sapiens has risen explosively to the ranks of an international bestseller. It tackles the biggest questions of history and of the modern world, and it is written in unforgettably vivid language. You will love it!' - Jared Diamond

A New York Times Book Review Editors' Choice "A brilliant and empathetic guide to the far corners of global capitalism." --Jenny Odell, author of How to Do Nothing From FSGO x Logic: stories about rural China, food, and tech that reveal new truths about the globalized world In Blockchain Chicken Farm, the technologist and writer Xiaowei Wang explores the political and social entanglements of technology in rural China. Their discoveries force them to challenge the standard idea that rural culture and people are backward, conservative, and intolerant. Instead, they find that rural China has not only adapted to rapid globalization but has actually innovated the technology we all use today. From pork farmers using AI to produce the perfect pig, to disruptive luxury counterfeits and the political intersections of e-commerce villages, Wang unravels the ties between globalization, technology, agriculture, and commerce in unprecedented fashion. Accompanied by humorous "Sinofuturist" recipes that frame meals as they transform under new technology, Blockchain Chicken Farm is an original and probing look into innovation, connectivity, and collaboration in the digitized rural world. FSG Originals x Logic dissects the way technology functions in everyday lives. The titans of Silicon Valley, for all their utopian

imaginings, never really had our best interests at heart: recent threats to democracy, truth, privacy, and safety, as a result of tech's reckless pursuit of progress, have shown as much. We present an alternate story, one that delights in capturing technology in all its contradictions and innovation, across borders and socioeconomic divisions, from history through the future, beyond platitudes and PR hype, and past doom and gloom. Our collaboration features four brief but provocative forays into the tech industry's many worlds, and aspires to incite fresh conversations about technology focused on nuanced and accessible explorations of the emerging tools that reorganize and redefine life today.

Technics and Civilization first presented its compelling history of the machine and critical study of its effects on civilization in 1934—before television, the personal computer, and the Internet even appeared on our periphery. Drawing upon art, science, philosophy, and the history of culture, Lewis Mumford explained the origin of the machine age and traced its social results, asserting that the development of modern technology had its roots in the Middle Ages rather than the Industrial Revolution. Mumford sagely argued that it was the moral, economic, and political choices we made, not the machines that we used, that determined our then industrially driven economy. Equal parts powerful history and polemic criticism, Technics and Civilization was the first comprehensive attempt in English to portray the development of the machine age over the last thousand years—and to predict the pull the technological still holds over us today. “The questions posed in the first paragraph of Technics and Civilization still deserve our attention, nearly three quarters of a century after they were written.”—Journal of Technology and Culture

How We Got to Now

Explore humanity's past--as well as its future--in this box set featuring *Sapiens* and its acclaimed companion *Homo Deus*, by one of the most innovative thinkers on the planet, Yuval Noah Harari. "Fascinating . . . a crucial global conversation about how to take on the problems of the twenty-first century."--Bill Gates, *New York Times Book Review* 100,000 years ago, at least six species of human inhabited the earth. Today there is just one. Us. *Homo Sapiens*. How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations, and human rights; to trust money, books, and laws; and to be enslaved by bureaucracy, timetables, and consumerism? And what will our world be like in the millennia to come? In *Sapiens*, Dr. Yuval Noah Harari spans the whole of human history, from the very first humans to walk the earth to the radical--and sometimes devastating--breakthroughs of the Cognitive, Agricultural, and Scientific Revolutions. Drawing on insights from biology, anthropology, palaeontology, and economics, he explores how the currents of history have shaped our human societies, the animals and plants around us, and even our personalities. Have we become happier as history has unfolded? Can we ever free our behaviour from the heritage of our ancestors? And what, if anything, can we do to influence the course of the centuries to come? Bold, wide-ranging, and provocative, *Sapiens* challenges everything we thought we knew about being human: our thoughts, our actions, our power . . . and our future. Humans today enjoy unprecedented levels of power and an increasingly god-like status. The great epidemics of the past--famine, plague and war--no longer control our lives. We are the only species in history that has single-handedly changed the entire planet, and we can no longer blame a higher being for our fate. But as our gods take a back seat, and *Homo Sapiens* becomes *Homo Deus*, what are we going to do with ourselves? How do we set the agenda for our own future without pushing our species--and the rest of the world--beyond its limits? In *Homo Deus: A Brief History of Tomorrow*, Dr. Yuval Noah Harari examines the implications of our newly upgraded condition, from our dogged pursuit of status and happiness to our constant quest to overcome death by pushing the boundaries of science. He explores how *Homo Sapiens* conquered the world, our creation of today's human-centred environment, our current predicament and our possible future. And, above all, he asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers?

Tell Me Everything

Not exercising as much as you should? Counting your calories in your sleep? Feeling ashamed for not being happier? You may be a victim of the wellness syndrome. In this ground-breaking new book, Carl Cederström and André Spicer argue that the ever-present pressure to maximize our wellness has started to work against us, making us feel worse and provoking us to withdraw into ourselves. The Wellness Syndrome follows health freaks who go to extremes to find the perfect diet, corporate athletes who start the day with a dance party, and the self-trackers who monitor everything, including their own toilet habits. This is a world where feeling good has become indistinguishable from being good. Visions of social change have been reduced to dreams of individual transformation, political debate has been replaced by insipid moralising, and scientific evidence has been traded for new-age delusions. A lively and humorous diagnosis of the cult of wellness, this book is an indispensable guide for everyone suspicious of our relentless quest to be happier and healthier.

The Wellness Syndrome

The Better Angels of Our Nature

Renaissance military memoirs studied for what they reveal of contemporary attitudes towards war, selfhood and identity. This is a study of autobiographical writings of Renaissance soldiers. It outlines the ways in which they reflect Renaissance cultural, political and historical consciousness, with a particular focus on conceptions of war, history, selfhood and identity. A vivid picture of Renaissance military life and military mentality emerges, which sheds light on the attitude of Renaissance soldiers both towards contemporary historical developments such as the rise of the modern state, and towards such issues as comradeship, women, honor, violence, and death. Comparison with similar medieval and twentieth-century material highlights the differences in the Renaissance soldier's understanding of war and of human experience.

For millennia, war was viewed as a supreme test. In the period 1750-1850 war became much more than a test: it became a secular revelation. This new understanding of war as revelation completely transformed Western war culture, revolutionizing politics, the personal experience of war, the status of common soldiers, and the tenets of military theory.
