What is Darwin's Theory of Evolution? - What is Darwin's Theory of Evolution? by LiveScience 573,492 views 6 years ago 2 minutes, 28 seconds - For the science geek in everyone, LiveScience.com breaks down the stories behind the most interesting news and photos on the ...

The **theory**, of **evolution**, by natural selection was first ...

Natural selection is often described as survival of the fittest, where fitness refers to the ability to survive and reproduce.

Natural selection can change a species in small ways, such as causing a population to change color or size over the course of generations.

There is also a form of natural selection that depends on an organism's success at attracting a mate, a process known as sexual selection.

Now, scientists know that the physical and behavioral changes that make natural selection possible happen at the genetic level.

GCSE Biology Revision "DNA and the Genome" - GCSE Biology Revision "DNA and the Genome" by Freesciencelessons 478,163 views 5 years ago 3 minutes, 29 seconds - In this video, we look at the basic **structure**, of **DNA**, and what is meant by a gene. We then explore the human genome. This video ...

Chromosomes are found in the nucleus of cells.

A key fact is that chromosomes contain the molecule DNA.

Scientists say that DNA is the genetic material.

DNA consists of two strands.

Each strand is made by joining together lots of smaller molecules.

In DNA, the two strands wrap around each other to form a double helix.

It is really important that you learn the term double helix.

As we said, DNA is found in chromosomes.

This shows a picture of a chromosome.

A key fact is that a gene is a small section of DNA on a chromosome.

This gene is found on chromosome number 9.

Proteins are made by joining together amino acids.

Each gene encodes for a specific sequence of amino acids to make a specific protein.

The blood type gene encodes the sequence of amino acids for the protein that determines blood type.

Humans have literally thousands of genes.

Chromosome 9 has well over 700 different genes.

In this case, both copies of chromosome 9 have the gene for blood type.

We are going to finish now by looking at the genome.

The genome is the entire genetic material of an organism.

The human genome is the entire genetic material that makes a human.

Scientists have now studied the entire human genome

Understanding the human genome will help us to search for genes that are linked to a disease...

Understanding the human genome will help us to understand and treat inherited disorders eg cystic fibrosis.

We can use the human genome to trace human migration patterns from the past.

This helps people to discover their ancestry.

RNA Nucleic Acid Structure & Function:A-level. Do you know the differences between mRNA, tRNA &rRNA? - RNA Nucleic Acid Structure & Function:A-level. Do you know the differences between mRNA, tRNA &rRNA? by Miss Estruch 57,266 views 3 years ago 8 minutes, 33 seconds - RNA is a nucleotide monomer that joins via condensation reactions to form a polynucleotide held in place by phosphodiester ...

The two strands of DNA are held together by hydrogen bonds between the bases forming the rungs of the DNA double helix

The double helix of DNA is also antiparallel - the strands of DNA run in opposite directions to each other

Complementary Base Pairing

Because the structure and bonding of the bases makes the pairing specific, we say the bases are complementary to each other
