The International Plant Protection Convention (IPPC) helps countries manage plant diseases and pests by training

The most widely recognised success of IPPC is the international standard for sanitation of wood packing materials.

It sets standard treatments to eliminate timber pest in pellet and wood packaging.

IPPC follows the detection of the bacteria diseases in olive trees in Southern Italy.

Some specific pests that are moving around the world are Xylella, tomato leaf borer and the Fall Armyworm.

and the potential for people to carry pests with them pose a big challenge to disease management. Another high risk pathways are seeds and implant for planting, which increase the risk of the spread of pest around the world.
