After 4 minutes you slide into physical death, chances of survival decrease. This manual shows you how to obtain Medical Direction for your program and Calculation formulas to decide your response time and number of AED's to place. The author of this manual has actual experienced using these devices in the public setting with great success. For more information go to www.aedmeddirect.com

Aehlert's EMT-basic Study Guide

EMTs can find themselves in critical situations that require advanced cardiac life support (ACLS). Although EMTs are not trained to provide advanced-level skills, there is much they can do to improve the quality of management, and thus the patient's chance for survival by understanding ACLS and facilitating its administration by ALS providers. Teamwork is the cornerstone of ACLS care. Advanced life support can only function on a foundation of solid, ongoing basic life support practices. As such, an understanding of the principles of advanced life support will enhance the ability of EMTs to work in collaboration to increase the survival rates of patients. Most importantly, better teamwork will improve care not only during cardiac arrests, but also during all emergency calls.
