Environmental issues continue to burden governments and economies throughout the post-communist countries of Central and Eastern Europe and the newly independent states of the former Soviet Union. Severe environmental degradation is endemic to the region, the existing environmental infrastructure is often inadequate, significant new investment is perhaps decades away, and there is little knowledge of advanced techniques for impact assessment, project evaluation, and project financing. The first two papers of Environmental Infrastructure Management survey available cost-effective technology for solid waste treatment and air pollution control, providing guidance for possible incremental additions to existing infrastructure. There is also a discussion of transferable pollution credits as an instrument in regulating air quality. The discussion of economic incentives also embraces user fees and other pollution control instruments. A range of methods is presented for the evaluation and comparison of alternative projects where data are poor or scarce. Canadian experience with specific capital budgeting techniques is given comprehensive attention. Debt financing strategies are addressed in the context of present-day Ukraine. Finally, an outline is given of a general framework for making decisions about environmental projects, including the use of environmental impact assessments.

Catalog of Copyright Entries. Part 1. [B] Group 2. Pamphlets, Etc. New Series

Various developments have taken place in the field of water treatment and boiler metallurgy, in the past few decades. The basic requirements of boiler operation and maintenance are optimal capacity, efficiency, safety, and high reliability in mechanical, electrical, and instrumentation aspects. Hands on Boiler and Auxs Operation Maintenance deals with imparting basic knowledge about different type of boilers and auxiliary equipment—their design, erection, trouble diagnosis, and remedial action. The metallurgical requirements to attain high thermal efficiency in plants are elucidated. Maintenance philosophy with regard to pressure parts, combustion systems, different auxiliary equipment, boiler metal loss, deposits or loss of efficiency, operating and maintenance problems are elaborated extensively. This workbook will serve as a practically helpful reference to power plant engineers at all stages of their tasks.

High-efficiency Gas Furnace Troubleshooting Handbook

Contains the proceedings of the Association.

House Beautiful's Building Manual

This is the story of an American dynasty. It is the story of the father, who built the fortune. Of the son, who cleansed the name. Of the Brothers, who manipulated both the name and the fortune to their own ends. And of the Cousins, who often wish they had inherited neither.
