My name is Marcus, I have a bachelor's degree in civil engineering as well a master's in health and safety.

A safety management system is a series of policies and procedures organizations use to reduce accidents and illnesses among employees.

According to OSHA, Effective Safety and Health Management Systems have proven to be a decisive factor in reducing the extent and severity of work-related injuries and illnesses

and examining the company's safety record to identify any trends or patterns that need to be addressed quickly

as well as to read and understand the company's health safety and environmental manual, and procedures in place.

Hierarchy of hazard control, is a system used in industry to minimize or eliminate exposure to hazards.

The hazard controls in the hierarchy are

Elimination.

Substitution

Engineering controls

Administrative controls

Personal protective equipment

... an **occupational health**, and **safety management**, plan.

Create awareness of hazards and risk.

Determine whether a control program is required for a particular hazard

Prevent injuries or illnesses

Prioritize hazards and control measures.

Meet legal requirements where applicable.

Assessments should be done by a competent person or team of individuals who have a good working knowledge of the situation being studied.

In general, to do an assessment, first we should

Determine the likelihood of harm

Identify actions necessary to eliminate the hazard

In my last company, one day the head of the maintenance department gave instructions to a group of workers to enter a confined space without the proper procedure (work permit) being followed.

After explaining to him, using internet news about accidents that occurred in confined spaces, he understood that the procedure would guarantee that such accidents did not happen.

From that day on in my training sessions, I always try to include real examples so that it is easier for everyone to understand the risks when the established rules are not complied with.

Then, I'd find out what type of first response was needed - both to treat any injured parties and attempt to gain control of and resolve the situation.

I would also immediately identify any other agencies or third parties that would need to be notified (such as the ambulance service or the fire brigade) and get them involved quickly.

If there were an accident, for instance, it would be important to be able to prove that we had provided necessary training and had the right policies in place

Intro

Welcome to this interview training tutorial.

Make Sure You Demonstrate The Following Skills & Attributes During Your Health & Safety Manager Interview

The role of a Health and Safety Manager is the type of position where you have to have the support of your employer.

My role, as your Health and Safety Manager would be first and foremost to monitor the various safety risks and hazards within the workplace to ensure all staff and visitors are safe from harm.

There are five important steps to consider when creating a suitable and appropriate risk assessment
At the end of the day, health and safety is law, and he or she would need to cooperate, or they could find themselves in breach of their employment contract.
