'A call to arms for everyone' Steve Backshall 'Eye-opening' New Scientist The diversity of life on earth is astounding, with each species perfectly adapted to its environment. Sharks can navigate the ocean using electromagnetic fields; sloths use algae as camouflage; albatross can fly for hours without beating their wings; and orca pods each have unique cultures and languages. But every hour, three species disappear. Our incredible world is at risk. Megan McCubbin reveals the stories of the scientists, rangers and conservationists who are fighting to save these extraordinary creatures from extinction. An Atlas of Endangered Species shows us that the battle is on for their survival - and we all have a part to play. 'Joyful and heartbreaking, an inspiring celebration of some of our planet's most endangered species and those who champion them' - Dave Goulson, author of Silent Earth 'A powerful, passionate plea for a wilder future' - Sophie Pavelle, author of Forget Me Not

Purnell's Illustrated World Atlas of Animals

*** Highly commended in the Public Health Category of the British Medical Association Book Competition 2005*** Every child has the right to live in a healthy supportive environment - an environment that encourages growth and development and protects from disease. Many of the world's children however

are exposed to hazards in the very places that should be safest - the home school and community. Considering that their growing bodies are particularly sensitive to environmental threats the final burden of childhood disease is substantial. Every year more than three million children die due to unhealthy environments. This atlas articulates where and why more than three million children die every year due to unhealthy environments. It tackles issues as diverse as the devastating and largely unknown impact of indoor air pollution the unfashionable tragedy of sanitation and complex emerging issues like climate change. Full-color maps and graphics clearly demonstrate the threats that children face everywhere and underscore the impact of poverty on children's health. While this crisis cannot be ignored and demands urgent action success stories such as the Montreal Protocol show a way forward for the world to make sure that our children will inherit a safer planet and a brighter future.

Atlas of the World's Deserts

The Atlas of Global Conservation is a premier resource for everyone concerned about the natural world. Top scientists at The Nature Conservancy have joined forces to create this guide to the state of the planet today. Interspersed throughout, essays by noted international authorities point the way forward in confronting some of our greatest conservation challenges.--Publisher information.

Wetlands in Danger

The world struggles with increasing threats to global sustainability, caused by population growth, overuse of fresh water resources, depletion of biodiversity, and reliance on non-renewable energy sources. There is an urgent need for an overall plan to address these challenges in a coordinated and effective manner. Whether in government, business, community or as an individual, we need to begin acting a lot smarter, faster and more collaboratively if we are going to avert the potential devastating impacts on this planet. Plan for the Planet outlines a co-ordinated approach to tackling the global challenges we face which can be implemented at every level. Using proven business management wisdom and principles, this book provides perhaps the most comprehensive and robust framework within which business, government and the community can work together to build a sustainable world. Whether you want to understand how to prepare your organisation and yourself to deal successfully with the global challenges, or seize the opportunities which are fast developing with the emergence of the sustainability revolution, you will benefit from reading this timely book.
