Tacna-Arica and the Washington Negotiations. Chile-Bolivian Relations

Climate change is the defining development challenge of our time. More than a global environmental issue, climate change and variability threaten to reverse recent progress in poverty reduction and economic growth. Both now and over the long run, climate change and variability threatens human and social development by restricting the fulfillment of human potential and by disempowering people and communities in reducing their livelihoods options. Communities across Latin America and the Caribbean are already experiencing adverse consequences from climate change and variability. Precipitation has increased in the southeastern part of South America, and now often comes in the form of sudden deluges, leading to flooding and soil erosion that endanger people's lives and livelihoods. Southwestern parts of South America and western Central America are seeing a decrease in precipitation and an increase in droughts. Increasing heat and drought in Northeast Brazil threaten the livelihoods of already-marginal smallholders, and may turn parts of the eastern Amazon rainforest into savannah. The Andean inter-tropical glaciers are shrinking and expected to disappear altogether within the next 20-40 years, with significant consequences for water availability. These environmental changes will impact local livelihoods in unprecedented ways. Poverty, inequality, water access, health, and migration are and will be measurably affected by climate change. Using an innovative research methodology, this study finds quantitative evidence of large variations in impacts across regions. Many already poor regions are becoming poorer; traditional livelihoods are being challenged in unprecedented ways; water scarcity is increasing, particularly in poor arid areas; human health is deteriorating; and climate-induced migration is already taking place and may increase. Successfully reducing social vulnerability to climate change and variability requires action and commitment at multiple levels. This volume offers key operational recommendations at the government, community, and household levels with particular emphasis placed on enhancing good governance and technical capacity in the public sector, building social capital in local communities, and protecting the asset base of poor households.

The Chinchorro culture

There is an increasing awareness that access to financial services can contribute to economic growth and poverty reduction. This study focuses on the delivery of financial services in Brazil, one of the world's most important emerging financial markets. It examines different aspects of financial service provision, and explores approaches to address problems of financial exclusion. Topics discussed include: microfinance schemes; private banking; rural finance systems; institutional infrastructure; and the role of government policy.

Boundary Disputes in Latin America

Chile enjoyed unique prestige among the Spanish American republics of the nineteenth century for its stable and increasingly liberal political tradition. How did this unusual story unfold? The tradition was forged in serious and occasionally violent conflicts between the dominant Conservative Party, which governed in an often authoritarian manner from 1830 to 1858, and the growing forces of political Liberalism. A major political realignment in 1857-8 paved the way for comprehensive liberalization. This book examines the formative period of the republic's history and combines an analysis of the ideas and assumptions of the Chilean political class with a narrative of the political process from the consolidation of the Conservative regime in the 1830s, to the beginnings of liberalization in the early 1860s. The book is based on a comprehensive survey of the writings and speeches of politicians and the often rumbustious Chilean press of the period.

Reducing Poverty, Protecting Livelihoods, and Building Assets in a Changing Climate

This book synthesizes findings regarding the political drivers of institutional change in extractive industry governance. It analyses resource governance from the late nineteenth century to the present in Bolivia, Ghana, Peru, and Zambia, focusing on the ways in which resource governance and national political settlements interact.

Access to Financial Services in Brazil

This is the first of five ambitious volumes theorizing the structure of governance above and below the central state. This book is written for those interested in the character, causes, and consequences of governance within the state and for social scientists who take measurement seriously. The book sets out a measure of regional authority for 81 countries in North America, Europe, Latin America, Asia, and the Pacific from 1950 to 2010. Subnational authority is exercised by individual regions, and this measure is the first that takes individual regions as the unit of analysis. On the premise that transparency is a fundamental virtue in measurement, the authors chart a new path in laying out their theoretical, conceptual, and scoring decisions before the reader. The book also provides summaries of regional governance in 81 countries for scholars and students alike. Transformations in Governance is a major new academic book series from Oxford University Press. It is designed to accommodate the impressive growth of research in comparative politics, international relations, public policy, federalism, environmental and urban studies concerned with the dispersion of authority from central states up to supranational institutions, down to subnational governments, and side-ways to public-private networks. It brings together work that significantly advances our understanding of the organization, causes, and consequences of multilevel and complex governance. The series is selective, containing annually a small number of books of exceptionally high quality by leading and emerging scholars. The series targets mainly single-authored or co-authored work, but it is pluralistic in terms of disciplinary specialization, research design, method, and geographical scope. Case studies as well as comparative studies, historical as well as contemporary studies, and studies with a national, regional, or international focus are all central to its aims. Authors use qualitative, quantitative, formal modeling, or mixed methods. A trade mark of the books is that they combine scholarly rigour with readable prose and an attractive production style. The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina, Chapel Hill, and the VU Amsterdam, and Walter Mattli of the University of Oxford.

Chile: The Making of a Republic, 1830-1865

Nowhere on Earth is there an ecological transformation so swift and so extreme as between the snow-line of the high Andes and the tropical rainforest of Amazonia. The different disciplines that research the human past in South America have long tended to treat these two great subzones of the continent as self-contained enough to be taken independently of each other. Objections have repeatedly been raised, however, to warn against imagining too sharp a divide between the people and societies of the Andes and Amazonia, when there are also clear indications of significant connections and transitions between them. Rethinking the Andes–Amazonia Divide brings together archaeologists, linguists, geneticists, anthropologists, ethnohistorians and historians to explore both correlations and contrasts in how the various disciplines see the relationship between the Andes and Amazonia, from deepest prehistory up to the European colonial period. The volume emerges from an innovative programme of conferences and symposia conceived explicitly to foster awareness, discussion and co-operation across the divides between disciplines. Underway since 2008, this programme has already yielded major publications on the Andean past, including *History and Language in the Andes* (2011) and *Archaeology and Language in the Andes* (2012).

Governing Extractive Industries

A common thread ties together the five case studies of this book: the persistence with which the bilateral relationship between the United States and the Soviet Union continues to dominate American foreign and regional policies. These essays analyze the LIC environment in Central Asia, the Middle East, Southeast Asia, Latin America, and sub-Saharan Africa.

Rethinking the Andes–Amazonia Divide

Winner of the Society for Historians of American Foreign Relations Robert H. Ferrell Book Prize *Financial Missionaries to the World* establishes the broad scope and significance of "dollar diplomacy"—the use of international lending and advising—to early-twentieth-century U.S. foreign policy. Combining diplomatic, economic, and cultural history, the distinguished historian Emily S. Rosenberg shows how private bank loans were extended to leverage the acceptance of American financial advisers by foreign governments. In an analysis striking in its relevance to contemporary debates over international loans, she reveals how a practice initially justified as a progressive means to extend "civilization" by

promoting economic stability and progress became embroiled in controversy. Vocal critics at home and abroad charged that American loans and financial oversight constituted a new imperialism that fostered exploitation of less powerful nations. By the mid-1920s, Rosenberg explains, even early supporters of dollar diplomacy worried that by facilitating excessive borrowing, the practice might induce the very instability and default that it supposedly worked against. "[A] major and superb contribution to the history of U.S. foreign relations. . . . [Emily S. Rosenberg] has opened up a whole new research field in international history."—Anders Stephanson, *Journal of American History* "[A] landmark in the historiography of American foreign relations."—Melvyn P. Leffler, author of *A Preponderance of Power: National Security, the Truman Administration, and the Cold War* "Fascinating."—Christopher Clark, *Times Literary Supplement*

The Military and the State in Latin America

This book is open access under a CC BY 4.0 license. This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world's main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy makers and other stakeholders involved in the potato and its contribution to humankind's food security.

Low-intensity Conflict in the Third World

The second installment in a planned three-volume series, this book provides the first substantive review of South American rodents published in over fifty years. Increases in the reach of field research and the variety of field survey methods, the introduction of bioinformatics, and the explosion of molecular-based genetic methodologies have all contributed to the revision of many phylogenetic relationships and to a doubling of the recognized diversity of South American rodents. The largest and most diverse mammalian order on Earth—and an increasingly threatened one—Rodentia is also of great ecological importance, and Rodents is both a timely and exhaustive reference on these ubiquitous creatures. From spiny mice and guinea pigs to the oversized capybara, this book covers all native rodents of South America, the continental islands of Trinidad and Tobago, and the Caribbean Netherlands off the Venezuelan coast. It includes identification keys and descriptions of all genera and species; comments on distribution; maps of localities; discussions of subspecies; and summaries of natural, taxonomic, and nomenclatural history. Rodents also contains a detailed list of cited literature and a separate gazetteer based on confirmed identifications from museum vouchers and the published literature.

Water Reuse: An International Survey of current practice, issues and needs examines water reuse practices around the world from different perspectives. The objective is to show how differently wastewater reuse is conceived and practised around the world as well as to present the varied needs and possibilities for reusing wastewater. In the first section water reuse practices around the world are described for regions having common water availability, reuse needs and social aspects. The second section refers to the "stakeholders" point of view. Each reuse purpose demands different water quality, not only to protect health and the environment but also to fulfil the requirements of the specific reuse.

Reuses considered are agricultural, urban agriculture as a special case of the former, municipal and industrial. Alongside these uses, the indirect reuse for human consumption through aquifer recharge is also discussed. The third section deals with emerging and controversial topics. Ethical and economical dilemmas in the field are presented as a subject not frequently addressed in this field. The role of governments in respect of public policy in reuse is discussed as well as the different international criteria and standards for reusing wastewater. The importance of public acceptance and the way to properly handle it is also considered. The fourth section of the book presents contrasting case studies; typical situations in the developed world (Japan and Germany) are compared to those in developing countries (Pakistan and Brazil) for agricultural and industrial reuse. Indirect planned reuse for human consumption (Germany) is compared with an unplanned one (Mexico). The Windhoek, Namibia case study is presented to emphasize why if the direct reuse of wastewater for human consumption has been performed with success for more than 35 years it is still the only example of this type around the world. To illustrate the difficulties of having a common framework for regulating water reuse in several countries, the Mediterranean situation is described. Other case studies presented refer to the reuse situation in Israel, Spain, Cameroon, Nepal and Vietnam, these latter countries being located in water rich areas. This book will be an invaluable information source for all those concerned with water reuse including water utility managers, wastewater policy makers and water resources planners as well as researchers and students in environmental engineering, water resources planning and sanitary engineering. Financial Missionaries to the World

This book is open access under a CC-BY license. The multiple purposes of nature – livelihood for communities, revenues for states, commodities for companies, and biodiversity for conservationists – have turned environmental governance in Latin America into a highly contested arena. In such a resource-rich region, unequal power relations, conflicting priorities, and trade-offs among multiple goals have led to a myriad of contrasting initiatives that are reshaping social relations and rural territories. This edited collection addresses these tensions by unpacking environmental governance as a complex process of formulating and contesting values, procedures and practices shaping the access, control and use of natural resources. Contributors from various fields address the challenges, limitations, and possibilities for a more sustainable, equal, and fair development. In this book, environmental governance is seen as an overarching concept defining the dynamic and multi-layered repertoire of society-nature interactions, where images of nature and discourses on the use of natural resources are mediated by contextual processes at multiple scales.

The Potato Crop

The diary of Heinrich Witt (1799-1892) is the most extensive private diary written in Latin America known to us today. Written in English by a German migrant who lived in Lima, it is a unique source for the history of Peru, and for international trade and migration.

Andean Roots and Tubers

This sourcebook appraises these instruments and considers their nature and objectives, their potential benefits and challenges and the approaches used to implement them. It also examines the practices that have led to both successful and unsuccessful outcomes. The publication provides a comprehensive review of the potential of these tools to enhance value addition, deliver jobs, increase exports and provide markets for new and existing producers in the targeted territories. It notes, however, that implementation of these tools poses a number of challenges. For example, planners and practitioners sometimes use them interchangeably, thus ignoring the specificities of the investments, policies and processes required, and their expected outcomes. The sourcebook concludes that these tools have potential for catalytic impact, but planners need to make sound choices that respect demonstrated principles and follow good practices for effective design and implementation.

Cross-border Water Trade: Legal and Interdisciplinary Perspectives is a critical assessment of one of the growing problems faced by the international community - the global water deficit. Apart from theoretical considerations it has very practical consequences, as cross-border water trade appears to constitute one of the most effective ways of balancing water deficits worldwide.

The private sector is playing an important role in funding scientific research. In this work, seven case studies from Argentina, China, Costa Rica, El Salvador, Tanzania, Peru, the Philippines and Vietnam examine how policies have been developed and implemented to encourage innovation.

The Great War and the Origins of Humanitarianism, 1918-1924

In the opening years of this century, a left-indigenous insurrectionary cycle in Bolivia mounted the most radical challenge to neoliberalism in the Western hemisphere. This book provides a Marxist and indigenous-liberationist analysis of this revolutionary epoch and its historical context.

Cross-border Water Trade: Legal and Interdisciplinary Perspectives

Peru's Truth and Reconciliation Commission not only documented the political violence of the 1980s and 1990s but also gave Peruvians a unique opportunity to examine the causes and nature of that violence. In *Art from a Fractured Past*, scholars and artists expand on the commission's work, arguing for broadening the definition of the testimonial to include various forms of artistic production as documentary evidence. Their innovative focus on representation offers new and compelling perspectives on how Peruvians experienced those years and how they have attempted to come to terms with the memories and legacies of violence. Their findings about Peru offer insight into questions of art, memory, and truth that resonate throughout Latin America in the wake of "dirty wars" of the last half century. Exploring diverse works of art, including memorials, drawings, theater, film, songs, painted wooden retablos (three-dimensional boxes), and fiction, including an acclaimed graphic novel, the contributors show that art, not constrained by literal truth, can generate new opportunities for empathetic understanding and solidarity. Fuelling Economic Growth

'This volume provides a splendid and wide-ranging collection of studies analyzing the political-economy of decentralization in Latin-America. It's a fascinating story with numerous and profound insights into

how fiscal decentralization actually works in the context of a variety of fiscal institutions and in a setting with a high degree of inequality in the distribution of income and territorial disparities.' - Wallace E. Oates, University of Maryland, US

Red October

This book has three main recommendations. First, it is necessary to generate basic standards, quality goals, and quality measurement systems. Second, once quality can be measured, a clear system of accountability should be implemented based on these standards and quality goals. The clients will play a central role in these systems by demanding their rights to quality services; this will only become possible once there are standards and goals that clarify clients' rights. Third, once there are standards and systems of accountability, investment is needed to strengthen the institutional capacity of the providers.

Art from a Fractured Past

This book traces the history of bird guano, demonstrating how this unique commodity helped unite the Pacific Basin with the industrialized world.

World Report 2005

Illuminating a hidden and fascinating chapter in the history of globalization, Paul Gootenberg chronicles the rise of one of the most spectacular and now illegal Latin American exports: cocaine. Gootenberg traces cocaine's history from its origins as a medical commodity in the nineteenth century to its repression during the early twentieth century and its dramatic reemergence as an illicit good after World War II. Connecting the story of the drug's transformations is a host of people, products, and processes: Sigmund Freud, Coca-Cola, and Pablo Escobar all make appearances, exemplifying the global influences that have shaped the history of cocaine. But Gootenberg decenters the familiar story to uncover the roles played by hitherto obscure but vital Andean actors as well—for example, the Peruvian pharmacist who developed the techniques for refining cocaine on an industrial scale and the creators of the original drug-smuggling networks that decades later would be taken over by Colombian traffickers. Andean Cocaine proves indispensable to understanding one of the most vexing social dilemmas of the late twentieth-century Americas: the American cocaine epidemic of the 1980s and, in its wake, the seemingly endless U.S. drug war in the Andes.

The Indigenous World 2005

This book strives to answer two interrelated questions: Why have certain states in the Americas been more successful than others at creating stable democratic regimes? Why have certain states in the Americas failed to create stable democratic regimes? To answer both questions, the author focuses on four states – the United States, Argentina, Chile, and Peru. Throughout the analysis, he isolates and evaluates the conditions that helped or hindered the development of each state and of its political regime. He presents his conclusions in the form of time-related explanatory hypotheses. By identifying and examining the conditions that brought about the transformation of each state and of its political regimes, this study ultimately facilitates a discussion of the future of democracy in each of these countries as well as in the world.

Toward High-quality Education in Peru

Defending 'la Patria,' or 'homeland,' is the historical mission claimed by Latin American armed forces. For la Patria is a comprehensive narrative history of the military's political role in Latin America in national defense and security. Latin American civil-military relations and the role of the armed forces in politics, like those of all modern nation-states, are framed by constitutional and legal norms specifying the formal relationships between the armed forces and the rest of society. In actuality, they are also the result of expectations, attitudes, values, and practices evolved over centuries—integral aspects of national political cultures. Military institutions in each Latin American nation have resulted from that country's own blend of local and imported influences, developing a distinctive pattern of civil-military

relations as defender of the fatherland and guarantor of security and order. Written by Latin American specialist Brian Loveman, *For la Patria* includes tables, maps, photographs, and a glossary that will assist the student in better understanding the military's intervention in politics in Latin America. This new text will give students a thorough and accessible history of Latin American armed forces and their actions in Latin American politics from colonial times to the present.
