### Drawing a Tree

For Drawing a Tree, Bruno Munari proposes: "When drawing a tree, always remember that every branch is more slender than the one that came before. Also note that the trunk splits into two branches, then those branches split in two, then those in two, and so on, and so on, until you have a full tree, be it straight, squiggly, curved up, curved down, or bent sideways by the wind."

### Tree Key

An exquisite, lovingly crafted meditation on plants, trees, and our place in the natural world, in the tradition of Robin Wall Kimmerer's *Braiding Sweetgrass* and Annie Dillard's *Pilgrim at Tinker Creek* "I was tired of speed. I wanted to live tree time." So writes Sumana Roy at the start of *How I Became a Tree*, her captivating, adventurous, and self-reflective vision of what it means to be human in the natural world. Drawn to trees' wisdom, their nonviolent way of being, their ability to cope with loneliness and pain, Roy movingly explores the lessons that writers, painters, photographers, scientists, and spiritual figures have gleaned through their engagement with trees—from Rabindranath Tagore to Tomas Tranströmer, Ovid to Octavio Paz, William Shakespeare to Margaret Atwood. Her stunning meditations on forests, plant life, time, self, and the exhaustion of being human evoke the spacious, relaxed rhythms of the trees themselves. Hailed upon its original publication in India as "a love song to plants and trees" and

“an ode to all that is unnoticed, ill, neglected, and yet resilient,” *How I Became a Tree* blends literary history, theology, philosophy, botany, and more, and ultimately prompts readers to slow down and to imagine a reenchanted world in which humans live more like trees.

### The Tree Book

The ever-popular subject of trees is covered in this fantastic field guide which includes more than 150 species that are likely to be encountered in Britain and elsewhere in northern and central Europe. This includes native species such as Hawthorn, Wild Cherry, English Elm and Sessile Oak together

with trees which have been widely introduced from other parts of the world. The book's USP is its ingenious set of identification keys at the start of the guide, which cover broadleaf and conifer leaves, buds, cones, catkins, flowers, fruit and bark and cross reference with the tree species and families in the main sections of the book. The guide is suitable for beginners and more knowledgeable readers and the text has been written in an easy-to understand style while there is a detailed glossary at the end of the book to explain any technical terms. Each species account covers a spread and includes a photo of the whole tree together with close-up detail of other features such as leaves, bark and so on while the accompanying text describes key characteristics for identification, including a useful 'Quick ID' section. In short this is a wonderful new field guide. The author, who has also taken all of the images himself, has been working on the idea and format for many years and is confident that the title offers something new in this market and that the book will be among the very best available in its category.

The idea of a bulletin devoted entirely to the study of certain phases of tree life in Michigan, was thought to stimulate interest in the study of our trees, and influence many more people to associate themselves with the growing number of tree lovers and with the supporters of the movement for better forest conditions in the state. The distinctive feature of the bulletin lies in its keys. The keys commonly published are based upon characters which are present but a short time during the year, or which can be used only by an advanced student of botany. This bulletin presents two keys. One is based upon characters which are present all summer; the other uses the winter characters as a basis for identification. By the use of the keys any person should be able to name and learn the characteristics of the trees of Michigan at any time of the year. These keys should prove of special value to our students in the public schools, to members of nature study clubs, and to the students in the forestry schools of the state.

The Surveillance Systems Project is directed toward increasing knowledge related to the techniques and procedures for interpreting aerial imagery and reducing extracted information to its most usable form. One Task, specifically concerned with image interpretation displays, conducts research to develop improved reference materials to assist image interpreters in locating and correctly identifying objects of military significance in aerial photographs. Specially developed reference keys are tested in controlled studies with interpreter output measures as criteria. The present publication describes one of the first such studies. An 'error key', developed through analysis of interpreter errors and designed to help interpreters avoid common misidentifications, and a 'rights key' similar to keys currently used by image interpreters, were provided to accompany two sets of aerial imagery. Two performance measures based on this imagery were administered to three matched groups of interpreter trainees. One group

used the 'error key', another group used the 'rights key', and a control group used no reference key. Performance data for the three groups--correct identifications, errors, and interpreters' confidence in their identifications--were analyzed. The 'error keys' resulted in substantial decrease in errors and increase in accuracy, but no difference in number of correct identifications. They also affected the differential between interpreters' confidence in right and wrong identifications, increasing the amount of difference in one performance measure, and decreasing the amount in the other. The 'rights key' did not have a significant effect on any aspect of performance measured.

Thirteen Ways to Smell a Tree takes you on a journey to connect with trees through the sense most aligned to our emotions and memories. Thirteen essays are included that explore the evocative scents of trees, from the smell of a book just printed as you first open its pages, to the calming scent of Linden blossom, to the ingredients of a particularly good gin & tonic: In your hand: a highball glass, beaded with cool moisture. In your nose: the aromatic embodiment of globalized trade. The spikey, herbal odour of European juniper berries. A tang of lime juice from a tree descended from wild progenitors in the foothills of the Himalayas. Bitter quinine, from the bark of the South American cinchona tree, spritzed into your nostrils by the pop of sparkling tonic water. Take a sip, feel the aroma and taste of three continents converge. Each essay also contains a practice the reader is invited to experience. For example, taking a tree inventory of our own home, appreciating just how many things around us came from trees. And if you've ever hugged a tree when no one was looking, try breathing in the scents of different trees that live near you, the smell of pine after the rain, the refreshing, mind-clearing scent of a eucalyptus leaf crushed in your hand.

In its first five years of existence, The Perl Journal ran 247 articles by over 120 authors. Every serious Perl programmer subscribed to it, and every notable Perl guru jumped at the opportunity to write for it. TPJ explained critical topics such as regular expressions, databases, and object-oriented programming, and demonstrated Perl's utility for fields as diverse as astronomy, biology, economics, AI, and games. The magazine gave birth to both the Obfuscated Perl Contest and the Perl Poetry contest, and remains a proud and timeless achievement of Perl during one of its most exciting periods of development. Computer Science and Perl Programming is the first volume of The Best of the Perl Journal, compiled and re-edited by the original editor and publisher of The Perl Journal, Jon Orwant. In this series, we've taken the very best (and still relevant) articles published in TPJ over its 5 years of publication and immortalized them into three volumes. This volume has 70 articles devoted to hard-core computer science, advanced programming techniques, and the underlying mechanics of Perl. Here's a sample of what you'll find inside: Jeffrey Friedl on Understanding Regexes Mark Jason Dominus on optimizing your Perl programs with Memoization Damian Conway on Parsing Tim Meadowcroft on integrating Perl with Microsoft Office Larry Wall on the culture of Perl Written by 41 of the most prominent and prolific members of the closely-knit Perl community, this anthology does what no other book can, giving unique insight into the real-life applications and powerful techniques made possible by Perl. Other books tell you how to use Perl, but this book goes far beyond that: it shows you not only how to use Perl, but what you could use Perl for. This is more than just The Best of the Perl Journal -- in many ways, this is the best of Perl.

The classic easy-reference field guide with more than 1500 photographs: "An almost foolproof practical reference book." —Kirkus Reviews (starred review) This useful book for botanists, horticulturists, and nature lovers is made up of two parts: Pictorial Keys and Master Pages. The Keys are designed for easy visual comparison of details that look alike, narrowing the identification of a tree to one of a small group—the family or genus. Then, in the Master Pages, the species of the tree is determined, with similar details placed together to highlight differences within the family group, thus eliminating all other possibilities. All of the more than 1500 photographs were made specifically for use in this book and were taken either in the field or of carefully collected specimens. Where possible, details such as leaves, fruit, etc., appear in actual size, or in the same scale.

This new kind of leadership is anchored in the concept of Being, the fundamental reality that underlies all phenomena.
