Engineering Management

This easy-to-read book prepares engineers to fulfill their managerial responsibilities, acquire useful business perspectives, and take on the much-needed leadership roles to meet the challenges in the new millennium. The book is organized in three parts: Part I reviews the basic functions of engineering management; Part II provides backgrounds in cost accounting, financial analysis, financial management and marketing management; and Part III readies the reader for exercising leadership in managing technologies through discussions related to engineers as managers/leaders, ethics, web-based tools, globalization and engineering management in the decades to come. For engineering professionals who have an interest in becoming managers and/or leaders in their field.

Engineering Management

Engineering Management: Meeting the Global Challenges prepares engineers to fulfill their managerial responsibilities, acquire useful business perspectives, and take on the much-needed leadership roles to meet the challenges in the new millennium. Value addition, customer focus, and business perspectives are emphasized throughout. Also underlined are discussions of leadership attributes, steps to acquire these attributes, the areas engineering managers are expected to add value, the web-based tools which can be aggressively applied to develop and sustain competitive advantages, the opportunities offered by market expansion into global regions, and the preparations required for engineering managers to become global leaders. The book is organized into three major sections: functions of engineering management, business fundamentals for engineering managers, and engineering management in the new millennium. This second edition refocuses on the new strategy for science, technology, engineering, and math (STEM) professionals and managers to meet the global challenges through the creation of strategic differentiation and operational excellence. Major revisions include a new chapter on creativity and innovation, a new chapter on operational excellence, and combination of the chapters on financial accounting and financial management. The design strategy for this second edition strives for achieving the T-shaped competencies, with both broad-based perspectives and in-depth analytical skills. Such a background is viewed as essential for STEM professionals and managers to exert a strong leadership role in the dynamic and challenging marketplace. The material in this book will surely help engineering managers play key leadership roles in their organizations by optimally applying their combined strengths in engineering and management.

Business Fundamentals for Engineering Managers

Engineering managers make long and lasting impact in industry by regularly developing new technology-based projects, new service innovations and/or efficiency-centered process improvements to create strategic differentiation and operational excellence. They need certain business fundamentals, which enable decision-making autonomy, leading to new or improved product or service offerings. The focus will be on problem solving to create solutions that are technically feasible, economically viable, marketplace acceptable and customer enlightening. The book consists of three sets of business fundamentals. There will be coverage on cost accounting and control, which will discuss service and product costing, activity based costing to define overhead expenses, and risk analysis and cost estimation under uncertainty. The chapter on financial accounting and management delineates the key financial statements, analyses, balanced scorecard, and capital asset valuation. The chapter on marketing management reviews marketing functions, forecasting, segmentation, customers and other factors affecting marketing success. The new business vocabulary and useful analysis tools presented in this book will enable engineering managers to become more effective when interacting with senior management, and to ready themselves to assume higher-level corporate responsibilities. Readers will benefit from a greater depth of business fundamentals and increased decision-making capabilities.

Pioneering New Technologies

The theme of this volume, Pioneering New Technologies: Management Issues and Challenges in the Third Millennium, has been selected to emphasize the growing recognition of the importance of new building and sustaining competitive advantage.

Service Systems Management and Engineering

The ultimate instructional guide to achieving success in the service sector Already responsible for employing the bulk of the U.S. workforce, service-providing industries continue to increase their economic dominance. Because of this fact, these companies are looking for talented new service systems engineers to take on strategic and operational challenges. This instructional guide supplies essential tools for career seekers in the service field, including techniques on how to apply scientific, engineering, and business management principles effectively to integrate technology into the workplace. This book provides: Broad-based concepts, skills, and capabilities in twelve categories, which form the "Three-Decker Leadership Architecture," including creative thinking and innovations in services, knowledge management, and globalization Materials supplemented and enhanced by a large number of case studies and examples Skills for successful service engineering and management to create strategic differentiation and operational excellence for service organizations Focused training on becoming a systems engineer, a critically needed position that, according to a 2009 Moneyline article on the best jobs in America, ranks at the top of the list Service Systems Management and Engineering is not only a valuable addition to a college classroom, but also an extremely handy reference for industry

leaders looking to explore the possibilities presented by the expanding service economy, allowing them to better target strategies for greater achievement.

Healthcare Information Systems: Challenges of the New Millennium

Healthcare information systems are crucial to the effective and efficient delivery of healthcare. Healthcare Information Systems: Challenges of the New Millennium reports on the implementation of medical information systems.

Pioneering New Technologies

The field of geoengineering is at a crossroads where the path to high-tech solutions meets the path to expanding applications of geotechnology. In this report, the term "geoengineering" includes all types of engineering that deal with Earth materials, such as geotechnical engineering, geological engineering, hydrological engineering, and Earth-related parts of petroleum engineering and mining engineering. The rapid expansion of nanotechnology, biotechnology, and information technology begs the question of how these new approaches might come to play in developing better solutions for geotechnological problems. This report presents a vision for the future of geotechnology aimed at National Science Foundation (NSF) program managers, the geological and geotechnical engineering community as a whole, and other interested parties, including Congress, federal and state agencies, industry, academia, and other stakeholders in geoengineering research. Some of the ideas may be close to reality whereas others may turn out to be elusive, but they all present possibilities to strive for and potential goals for the future. Geoengineers are poised to expand their roles and lead in finding solutions for modern Earth systems problems, such as global change, emissions-free energy supply, global water supply, and urban systems.

Geological and Geotechnical Engineering in the New Millennium

Health Care Operations and Supply Chain Management This innovative text offers a thorough foundation in operations management, supply chain management, and the strategic implementation of programs, techniques, and tools for reducing costs and improving quality in health care organizations. The authors incorporate the features and functions of Microsoft Excel where appropriate in their coverage of supply chain strategy, process design and analysis of health care operations, managing health care operations quality, and planning and controlling health care operations. Health Care Operations and Supply Chain Management offers real-world examples to illustrate the most current concepts and techniques such as value stream mapping and Six Sigma. In addition, the authors clearly demonstrate how operations and process improvement relate to contemporary health care trends such as evidence-based medicine and pay-for-performance. Health Care Operations and Supply Chain Management contains: Leading edge concepts and techniques Real-life data and actual examples from health care settings to underscore the main concepts in the text Instruction in the use of Microsoft Excel for health care operations and supply side management The book's numerous screen shots and detailed instructions guide the student through the use of Microsoft Excel's many functions and features.

Biomedical Engineering Entrepreneurship

Engineering Management: Meeting the Global Challenges prepares engineers to fulfill their managerial responsibilities, acquire useful business perspectives, and take on the much-needed leadership roles to meet the challenges in the new millennium. Value addition, customer focus, and business perspectives are emphasized throughout. Also underlined are discussions of leadership attributes, steps to acquire these attributes, the areas engineering managers are expected to add value, the web-based tools which can be aggressively applied to develop and sustain competitive advantages, the opportunities offered by market expansion into global regions, and the preparations required for engineering managers to become global leaders. The book is organized into three major sections: functions of engineering management, business fundamentals for engineering managers, and engineering management in the new millennium. This second edition refocuses on the new strategy for science, technology, engineering, and math (STEM) professionals and managers to meet the global challenges through the creation of strategic differentiation and operational excellence. Major revisions include a new chapter on creativity and innovation, a new chapter on operational excellence, and combination of the chapters on financial accounting and financial management. The design strategy for this second edition strives for achieving the T-shaped competencies, with both broad-based perspectives and in-depth analytical

skills. Such a background is viewed as essential for STEM professionals and managers to exert a strong leadership role in the dynamic and challenging marketplace. The material in this book will surely help engineering managers play key leadership roles in their organizations by optimally applying their combined strengths in engineering and management.

Health Care Operations and Supply Chain Management

This book is designed to be an inclusive for the best practice approach to building maintenance management, where the processes, procedures and operational systems meet a high standard of professional and academic competence. It offers a different perspective on building maintenance management by presenting the schematic building maintenance value chain model and its implementation in Malaysian university buildings. The findings show an improvement to building performance, lower maintenance cost, building sustainability and increased maintenance service user satisfaction. The learning outcomes and summaries provided for each chapter and the extensive use of tables and figures add to the readability of the text. Though the book is based on data from Malaysia, it is useful for a much wider audience, and the informal writing style makes it an interesting reference source. This book is valuable for readers who are practitioners, professionals and for academic institutions that offer courses in the building field, including architecture, quantity surveying, civil engineering, building and facility management, property management, real estate. It will also be of interest to governments and others involved in the construction industry.

Engineering Management

Organisational Ethics in the Built Environment A comprehensive analysis of the critical role played by ethics in construction organisations, and a toolkit for implementing a strong ethical culture In *Organisational Ethics in the Built Environment*, accomplished construction leader Jason Challender delivers an insightful and important resource for construction industry professionals contributing to the creation of safe and suitable projects. The author explains how to construct the foundation for ethical building and business practices in the construction industry, and explores the methods, motives and rationales behind successful and ethical projects from an organisational and industry perspective. You'll learn how practical improvements to organisational ethics can promote ethical standards, behaviours and practices and influence the success of projects in the built environment. You'll also discover the importance of leadership, motivational management, human resource management, corporate responsibility and social value in encouraging strict compliance and adherence to ethical principles, values and standards within organisations. Readers will also find: A thorough introduction to the critical importance of trust, collaborative working and partnering arrangements in contemporary construction and engineering organisations Comprehensive explorations of the relevance of environmental ethics Practical discussions of how to link corporate policies and strategies to ethical guidelines Case studies from across a variety of knowledge fields, including manufacturing and retail Perfect for construction managers, *Organisational Ethics in the Built Environment* will also benefit undergraduate and postgraduate students of construction, business, management, engineering and other construction related subjects.

Building Maintenance Processes and Practices

This book is about the great innovations that the biomedical industry has had on improving the health and treating diseases of people and the incredible effort that scientists, engineers, technologists, mathematicians and physicians has invested in conceptualizing, producing and marketing the innovations. This rapidly growing industry is a knowledge intensive industry that is constantly generating, and adapting to, new technology. The innovations are the movers leading to the growth of the biomedical industry since 1960. However, its growth may be threatened by the lack of access to capital, a burdensome and uncertain regulatory environment, and lack of R&D innovation and productivity. It is written for students and professionals in science, technology, engineering, mathematics and medicine wanting to become a successful biomedical entrepreneur and to grow the biomedical industry. This book covers these four sectors of biomedical industries: medical technologies, healthcare information technology, pharmaceutical industry and biotech. Many innovations are employed throughout the book to make this book as a resource of use to help you invent, evaluate, develop and market your innovative products. Part I examines the education merits of biomedical engineers and teaches biomedical professionals to conceptualize their innovations and to assess whether their innovations could be manufactured and be wanted by patients. Part II will guide budding entrepreneurs to form the company and entrepreneurial

team, to raise venture capital, to patent your innovative products, to obtain regulatory approval and to write your business plan. Other important aspects of company operations like financing, negotiations, leadership, manufacturing, marketing and globalization are covered in Part III. Two concluding chapters, with excerpts from leaders in community, education and industries, touch on the development, growth and investment of biomedical entrepreneurs on the delivery of better healthcare and economy to all people in the world.

Organisational Ethics in the Built Environment

* Presents assessment methods for organization and management processes. * Provides special tools and techniques for managing and organizing R&D, new product, and project-oriented challenges. * Includes real-world case studies.

The field of geoengineering is at a crossroads where the path to high-tech solutions meets the path to expanding applications of geotechnology. In this report, the term "geoengineering" includes all types of engineering that deal with Earth materials, such as geotechnical engineering, geological engineering, hydrological engineering, and Earth-related parts of petroleum engineering and mining engineering. The rapid expansion of nanotechnology, biotechnology, and information technology begs the question of how these new approaches might come to play in developing better solutions for geotechnological problems. This report presents a vision for the future of geotechnology aimed at National Science Foundation (NSF) program managers, the geological and geotechnical engineering community as a whole, and other interested parties, including Congress, federal and state agencies, industry, academia, and other stakeholders in geoengineering research. Some of the ideas may be close to reality whereas others may turn out to be elusive, but they all present possibilities to strive for and potential goals for the future. Geoengineers are poised to expand their roles and lead in finding solutions for modern Earth systems problems, such as global change, emissions-free energy supply, global water supply, and urban systems.

Being A Biomedical Entrepreneur - Growth Of The Biomedical Industry

As the service sectors play an increasingly important role in all economies worldwide, service executives and professionals are well advised to recognize two main pathways to achieving sustainable success in services. The first path requires enhancing the strategic differentiation and operational excellence of their service enterprises; the second requires that these executives and their employees develop the knowledge and skills needed to achieve such success. Specifically, this book discusses actionable methodologies needed to generate creative ideas, including deciding on which ones to pursue; on how to justify projects financially; on how to manage the development projects for innovative services; and on how to reach out to customers and offer them superior service support.

Management of Technology

As the 21st century begins, we are faced with opportunities and challenges of available technology as well as pressured to create strategic and tactical plans for future technology. Worldwide, IT professionals are sharing and trading concepts and ideas for effective IT management, and this co-operation is what leads to solid IT management practices. This volume is a collection of papers that present IT management perspectives from professionals around the world. The papers seek to offer new ideas, refine old ones, and pose interesting scenarios to help the reader develop company-sensitive management strategies.

Geological and Geotechnical Engineering in the New Millennium

A single source for mechanical engineers, offering all the critical information they require.

Achieving Service Excellence

The modern world is developing at a pace where few can thoroughly keep track of its progress. More advancements in technology, evolving standards of education, and ongoing cultural and societal developments are leading to a need for improved pathways of knowledge discovery and dissemination. Knowledge-Intensive Economies and Opportunities for Social, Organizational, and Technological Growth provides emerging research exploring how academic research can represent both a bold re-

sponse to the problems society faces today and a source of alternative solutions to those problems. This publication is derived from the basic understanding that education plays the role of the key enabler in the process of navigating these contemporary challenges. Featuring coverage on a broad range of topics such as e-service exploration, progressive online learning in urban areas, and advances in multimedia sharing, this book is ideally designed for consultants, academics, industry professionals, policymakers, politicians, and government officials seeking current research on the impact of information technology and the knowledge-based era.

Challenges of Information Technology Management in the 21st Century

Managing technological innovations and related policy and strategy issues have been a central focus of the new millennium. This book series presents an interdisciplinary scholarship and dialogue on the management of innovation and technological change in a global context from a variety of perspectives, including strategic, managerial, behavioral, and policy issues. Papers selected in this volume have four prominent themes: the wide spread interests and the global application of the technological innovation; the practicality of the research on technological innovation implementation to foster success and financial growth; the socio-technical challenges behind innovation and creativity that might outweigh the benefits; and the new principles/practices/perspectives on our understanding of the technological innovation. Contributed by prominent scholars and practitioners from around the world in innovation, management and policy area, this book will become a very useful read for anyone who is interested in learning the most contemporary perspectives on the subject.

Mechanical Engineers' Handbook: Manufacturing and management

A comprehensive, up-to-the-minute account of bridge management developments for researchers, designers, builders, administrators, and owners Bridge Management draws on Bojidar Yanev's thirty years of research, teaching, and consulting as well as his management of 800 of New York City's 2,200 bridges. It offers an insider's view of the problems to be resolved in bridge management by civil and transportation engineers, budget and asset managers, abstract analysts, and hands-on field workers. The personal search of the author for solutions is juxtaposed with an overview of the dynamic interactions between bridge builders and the social and physical forces shaping the transportation infrastructure over the centuries. Bridge Management uniquely integrates the priorities, constraints, objectives, and tastes governing the domains of structural mechanics, economics, public administration, and field operations at both the project and network levels. It features: A review of current bridge management vulnerabilities, objectives, tools, and products Dozens of case studies illustrating the application of analytic models, and practical developments currently shaping the field Unique chapters exploring the evolution of bridge design, construction, and maintenance, from the origins of deliberate planning to the current integrated lifecycle asset management models

Knowledge-Intensive Economies and Opportunities for Social, Organizational, and Technological Growth

Nestled in the heart of the "Old Continent", along the border between Slovenia and the Italian region of Friuli Venezia Giulia, Slovenes in Italy form one of Europe's national minorities. This volume presents an up-to-date overview of their efforts to preserve their cultural and linguistic heritage and distinctiveness. The Slovene national community in Italy has been affected by profound and at times devastating events, including both World Wars, the fascist period and the lengthy process of defining the border between Italy and Yugoslavia. The collapse of the Berlin Wall, Slovenia's declaration of independence and the process of globalisation have provided the community with new forms of protection, but also presented it with further challenges associated with adopting its development guidelines. This book is dedicated to researchers on ethnic studies, civil rights activists and politicians dealing with minority and human rights and diversity management, as well as tourists, teachers and students.

The Dark Side of Technological Innovation

I.T. Wars provides a clear path to proper alignment of technology and business, in achieving best results and ongoing returns. The true challenge is in bringing diverse groups of people together from the business and technical realms, in defining needs and making true delivery of solutions. The Business-Technology Weave is an approach that turns everyone and everything into a responsible forward edge. It includes considerations of people, knowledge, communication, corporate culture, attitudes, relationships, content (information), infrastructure, applications, needs, and expectations. It

comprises missions with specific beliefs, values, and standards in service to security and growth. The Weave clears political impairments, helps to dismantle protectionism and jealousy, and breaks down departmental "silos." It opens the way to a future that you define - in preventing the alternative: future's imposition on you. What are the liabilities in today's environment of e-mail, blogs, IMs, downloads, and portable data? Consider: What is being done 'in the name of your domain'? How best to manage content, in avoiding a glut of information? How can staff best utilize the power of the utilities that are delivered to their desktops? What are the new scales of disaster planning, preparedness, prevention, and recovery? What is your organization's role in contributing to the surrounding public safety - in securing your own? I.T. Wars begins with a patient, comprehensive exposure of today's environment and challenges, with equal attention to the Business and IT reader. Whether your organization is public, private, government agency, or association you share in the same concerns: You need a business-driven technology strategy, as well as a business serving one. Now you can develop a vision and pragmatism strong enough to qualify for discussion, planning, and achievement of the best business-technology outcomes.

Bridge Management

International Conference on Industrial Engineering and Engineering Management is sponsored by Chinese Industrial Engineering Institution, CMES, which is the unique national-level academic society of Industrial Engineering. The conference is held annually as the major event in this area. Being the largest and the most authoritative international academic conference held in China, it supplies an academic platform for the experts and the entrepreneurs in International Industrial Engineering and Management area to exchange their research results. Many experts in various fields from China and foreign countries gather together in the conference to review, exchange, summarize and promote their achievements in Industrial Engineering and Engineering Management fields. Some experts pay special attention to the current situation of the related techniques application in China as well as their future prospect, such as Industry 4.0, Green Product Design, Quality Control and Management, Supply Chain and logistics Management to cater for the purpose of low-carbon, energy-saving and emission-reduction and so on. They also come up with their assumption and outlook about the related techniques' development. The proceedings will offer theatrical methods and technique application cases for experts from college and university, research institution and enterprises who are engaged in theoretical research of Industrial Engineering and Engineering Management and its technique's application in China. As all the papers are feathered by higher level of academic and application value, they also provide research data for foreign scholars who occupy themselves in investigating the enterprises and engineering management of Chinese style.

A Community at the Heart of Europe

Actors in the world of work are facing an increasing number of challenges, including automatization and digitalization, new types of jobs and more diverse forms of employment. This timely book examines employer and worker responses, challenges and opportunities for social dialogue, and the role of social partners in the governance of the world of work.

I. T. Wars

Recognizing the central role of engineering activity in modern societies, Engineering & Society explores the global and social context of contemporary engineering practice. This text breaks new ground in the way that it puts engineering into a broad social, political, economic, and philosophical context. Engineering & Society utilizes a multidisciplinary approach to explore what engineers do, the education, knowledge and skills they need, and their roles and responsibilities in society. Three ongoing themes provide continuity to this text: the nature of technology and its relationship to engineering; the nature of development and its relationship to engineering; and the role that professional engineering practice plays in the development of technology and the sustainable creation wealth. *The history of engineering and engineering design *The social and political contexts in which engineers practice *How engineers create new products, processes and systems *Engineering leadership and management *Economic development and the globalization of engineering practice *The challenges of reconciling development with ecological consequences *Ethics and future challenges in professional engi

Marine Science Into the New Millennium

With the globalization of the manufacturing base, outsourcing of many technical services, the efficiencies derived from advances in information technology (and the subsequent decrease in mid-management positions), and the shifting of our economy to be service-based, the roles of the technical organization and the engineering manager of those organizations has dramatically changed. The 21st century technical organization and its managers must be concerned with maintaining an agile, high quality, and profitable business base of products or services in a fluctuating economy, hiring, managing, and retaining a highly qualified and trained staff of engineers, scientists, and technicians in a rapidly changing technological environment, and demonstrating a high level of capability maturity. Under this backdrop the American Society of Engineering Management sponsored the development of the handbook. This handbook is written for engineering managers in government and industry and to serve as a reference book in academics. We chose to group the 19 chapters contained in the textbook into broad areas to include Historical, Professional, and Academic Perspective, Management of Engineering Core Competencies, Quantitative Methods and Modeling, Accounting, Financial, and Economic Basis, Project Management and Systems Engineering, Business Acumen, and Governance. Our hope is that this handbook, like the engineering management profession will evolve. Within five years, for most engineers' technical management become their primary job function. Combined with the fact that the modern engineering enterprise is now characterized by geographically dispersed and multi-cultural organizations, engineering management is more relevant than ever.

Proceedings of the 23rd International Conference on Industrial Engineering and Engineering Management 2016

Challenges of Information Technology Education in the 21st Century strives to address a variety of pertinent questions surrounding the rapidly changing area of IT education, such as: What topics are important for the 21st Century? How does the Internet change the task of teaching? What is the role of the professor in a world of online learning? This exciting book will be an invaluable resource for educators in the field of information technology.

The New World of Work

The aim of this book is to encourage integration of the natural and social sciences with the policy and design-making community, and thereby develop a deeper understanding of complex environmental problems. Its fundamental themes are: • integrated modeling and assessment • complex, adaptive, hierarchical systems • ecosystem services • science and decision-making • ecosystem health and human health • quality of life and the distribution of wealth and resources. This book will act as a state of the art assessment of integrated environmental science and its relation to real world problem solving. It is aimed not only at the academic community, but also as a sourcebook for managers, policy makers, and the informed public. It deals both with the state of the science and the level of consensus among scientists on key environmental issues. The concepts underlying this book were developed at the 2nd EcoSummit workshop held in Halifax, Nova Scotia, June, 2000, with active participation from all delegates, and attempts to present their collective view.

Engineering and Society

This book reviews the state-of-the-art and state-of-the-practice of modeling methods and methodologies in information systems development. The book has sections on foundations of information modeling, extended object-oriented modeling and Web information systems modeling. Information Modeling in the New Millennium addresses the gap between technical and business-oriented modeling approaches by providing an integrative view of modeling different facets of ICT and organizations.

The Engineering Management Handbook

A must-read for any project management professional or student. Projects are the life blood of any organization. Revised to reflect the latest changes to A Guide to the Project Management Body of Knowledge (PMBOK(R)) and the Project Management Professional Exam(R), the fourth edition of The AMA Handbook of Project Management provides readers with a clear overview of a complex discipline. Covering everything from individual projects to programs and strategic alignment, it addresses: Project initiation and planning Communication and interpersonal skills Scheduling, budgeting and meeting business objectives Managing political and resource issues Implementing a PMO Measuring value and competencies. The book compiles essays and advice from the field's top professionals and features new chapters on stakeholder management, agile project management, program management, project

governance, knowledge management, and more. Updated with fresh examples, case studies and solutions to specific project management dilemmas, it remains an essential reference to the critical concepts and theories all project managers must master.

Challenges of Information Technology Education in the 21st Century

America is changing. Many of the most noticeable changes in day-to-day life are associated with the advancing capabilities of computer systems, the growing variety of tasks they can accomplish, and the accelerating rate of change. Advanced engineering environments (AEEs) combine advanced, networked computer systems with advanced modeling and simulation technologies. When more fully developed, AEEs will enable teams of researchers, technologists, designers, manufacturers, suppliers, customers, and other users scattered across a continent or the globe to develop new products and carry out new missions with unprecedented effectiveness. Business as usual, however, will not achieve this vision. Government, industry, and academic organizations need to make the organizational and process changes that will enable their staffs to use current and future AEE technologies and systems. Design in the New Millennium: Advanced Engineering Environments: Phase 2 is the second part of a two-part study of advanced engineering environments. The Phase 1 report, issued in 1999, identified steps the federal government, industry, and academia could take in the near term to enhance the development of AEE technologies and systems with broad application in the U.S. engineering enterprise. Design in the New Millennium focuses on the long-term potential of AEE technologies and systems over the next 15 years. This report calls on government, industry, and academia to make major changes to current organizational cultures and practices to achieve a long-term vision that goes far beyond what current capabilities allow.

Understanding and Solving Environmental Problems in the 21st Century

In examining how to be a successful manager in the coming century, Di Kamp emphasizes the need to continue to learn and set an example. The main premise of 21st Century Manager is that the most powerful thing a manager does is to "be".

Information Modeling in the New Millennium

Although construction is one of the most labour-intensive industries, people management issues are given inadequate attention. Furthermore, the focus of attention with regards to HR has been on the strategic aspects of HRM function - yet most problems and operational issues arise on projects. To help redress these problems, this book takes a broad view of HRM, examining the strategic and operational aspects of managing people within the construction sector. The book is aimed at project managers and students of project management who, until now, have been handed the responsibility for human resource management without adequate knowledge or training. The issues addressed in this book are internationally relevant, and are of fundamental concern to both students and practitioners involved in the management of construction projects. The text draws on the authors' experience of working with a range of large construction companies in improving their HRM operational activities at both strategic and operational levels, and is well illustrated with case studies of projects and organizations.

The AMA Handbook of Project Management

Environmental engineers support the well-being of people and the planet in areas where the two intersect. Over the decades the field has improved countless lives through innovative systems for delivering water, treating waste, and preventing and remediating pollution in air, water, and soil. These achievements are a testament to the multidisciplinary, pragmatic, systems-oriented approach that characterizes environmental engineering. Environmental Engineering for the 21st Century: Addressing Grand Challenges outlines the crucial role for environmental engineers in this period of dramatic growth and change. The report identifies five pressing challenges of the 21st century that environmental engineers are uniquely poised to help advance: sustainably supply food, water, and energy; curb climate change and adapt to its impacts; design a future without pollution and waste; create efficient, healthy, resilient cities; and foster informed decisions and actions.
