

Twentieth Century Analytic Philosophy

[#analytic philosophy](#) [#20th century philosophy](#) [#logical positivism](#) [#philosophy of language](#) [#continental philosophy](#)

Twentieth-century analytic philosophy represents a significant shift in philosophical inquiry, emphasizing logical rigor, clarity, and the analysis of language. Emerging from early movements like logical positivism, it heavily influenced fields such as metaphysics, epistemology, and ethics. Key features include a focus on conceptual analysis, a rejection of speculative metaphysics, and a commitment to empirical evidence where relevant, distinguishing it significantly from continental philosophical traditions and leaving a lasting impact on modern thought.

Fuller Harold North Fowler Christopher Mastropietro Aristophanes ...

Introduction to episode

Socrates the Monstrous

Socrates described himself as *atopos*, which means "strange" or "out of place," not belonging to any known category. It resembles the modern word "atypical" but is deeper and more powerful.

Metaxy: as fundamentally in between the human and the divine

Finitude and Transcendence

Eros

The monster distorts the normal categories in a way that is startling, challenging and disruptive.

Questioning

By practicing this kind of dialogue, Socrates has come to know that he does not know.

One has been pretending - deeply, unconsciously, automatically, reactively - to know.

Learned Ignorance

Horizon of Wonder

The psychoanalyst and social psychologist Erich Fromm successfully combined psychological and sociological thinking in a social psychological theory and method. World-wide known are his books *Escape from Freedom*, *The Art of Loving* and *To Have Or to Be?* and his humanistic concept of man. Professor Fuller's research concerns the relationship between psychology and religion as well as the study of contemporary religion in the United States

Wisdom begins in Wonder

Educe: to bring out, or draw forth. Closely related to the word "education."

To be on the Horizon of Wonder is to be in a place in which you are calling yourself and your world into question. So a new self in a new world can deeply be born.

The process of dialogos is not something we do. It is something we participate in, the way we participate in love and friendship. It is between us, and between us and the world.

Harold North Fowler was the original translator of a number of Plato's works for the Loeb Classical Library collection.

we seek to bind ourselves to things

We seem by nature to be looking for things other than ourselves, to complete us. Self-transcendence; I'm looking for something that's other than me to become me so that I am more than me, but completed as me.

The unexamined life is not worth living.

1) The best life is the life of virtue.

2) Virtue depends on knowledge.

3) He does not have the knowledge needed for virtue.

Aristophanes was a famous comic playwright of ancient Athens. His play *The Clouds* gives a critical portrayal of Socrates as a man of nonsense and deception. Socrates addresses the slander in Plato's *Apology*.

... **20th century**, Continental **philosophy**, Christian religion ...

Is Socrates just Plato's mouthpiece?

Practice Intro.

Finding Your Root.

The humble wonder practice

There is so much I do not know about myself because of all of the facts.

There is so much I shall never know about myself because of all of the fate.

There is so much I refuse to see about myself because of all of my foolishness.

There is so much I am unable to see about myself because of all of my faults.

History of Twentieth-century Philosophy of Science

History of twentieth-century philosophy of science opens with an introduction to contemporary philosophy of science as of the beginning of the twenty-first century, and describes the new specialty of computational philosophy of science. Seven chapters describing the philosophies of several major philosophers of science follow this introductory chapter. These major philosophers include Ernst Mach and Pierre Duhem, Rudolf Carnap and Willard Van Quine, Werner Heisenberg, Karl Popper, Thomas Kuhn and Paul Feyerabend, Norwood Russell Hanson, and Paul Thagard and Herbert Simon. The book concludes with a large bibliography.

Twentieth-Century Philosophy of Science: A History (Third Edition)

By exploring Mach's views on science as well as philosophy, this book attempts to wrest him free from his customary association with logical positivism and to reinterpret him on his own terms as a natural philosopher and naturalist about human knowledge. Physicists, psychologists, philosophers of science, historians of twentieth-century thought and culture, and educators will find this volume a valuable help in interpreting Mach's ideas.

Ernst Mach's World Elements

"History of Twentieth-Century Philosophy of Science" is a short history that examines the philosophies of science of Ernst Mach, Pierre Duhem, Rudolf Carnap, Willard Van Quine. Niels Bohr, Albert Einstein, Werner Heisenberg, Karl Popper, Alfred Lande, James Conant, Thomas Kuhn, Ernest Nagel, Dudley Shapere, Paul Feyerabend, Russell Hanson, Mary Hesse, David Bohm, Herbert Simon, Trygve Haavelmo, Welsey Mitchell, Max weber, Talcott Parsons, and George Lundberg. The principal thesis of the book are firstly the emergence of the contemporary pragmatism due to philosophers' reflections on

the modern quantum theory, secondly the retarded condition of social science due to social scientists' fidelity to romanticism, and thirdly the newly emerging area of computerized artificial intelligence discovery systems. The three traditions of romanticism, positivism, and contemporary pragmatism are discussed in terms of four philosophy-of-science topics: the aim of science, scientific discovery and theory development, scientific criticism, and scientific explanation. The price is \$10.00 US per copy, all taxes and shipping costs included. Add \$6.00 US for shipping outside the U.S. Prepayment is required of all noninstitutional and nontrade buyers. Send purchase order or check prepayment to: Thomas J. Hickey, P.O. Box 229, Oak Park, IL 60303.

History of Twentieth Century Philosophy of Science

Section Guide 1. Prolegomena 2. Biographical Sketch 3. Epistemology 4. Textbook Ontology 1. PRO-LEGOMENA While both philosophers and historians almost always love truth and the search for truth, and both often carry out extensive research, there can be noticeable differences when historians write about the history of philosophy and when philosophers write about it. Philosophers often look at the past with categories and interests taken from the present or at the least from the recent past, but many historians, especially those who love research for its own sake, will try to look at the past from a perspective either from that period or from even earlier. Both camps look for roots, but view them with different lenses and presuppositions. This prolegomena has been added to prepare some philosophers for what will hopefully only be the mildest of shocks, for seeing the history of philosophy in a way which does not treat what is recent or latest as best, but which loves the context of ideas for its own sake, a context which can be very foreign to contemporary likes and dislikes. To be sure, we historians can deceive ourselves as easily as philosophers, but we tend to do so about different things.

Ernst Mach's Vienna 1895-1930

In the early twentieth century, Ernst Mach, William James, and Bertrand Russell founded a philosophical and scientific movement known as 'neutral monism', based on the view that minds and physical objects are constructed out of elements or events which are neither mental nor physical, but neutral between the two. This movement offers a unified scientific outlook which includes sensations in human experience and events in the world of physics under one roof. In this book Erik C. Banks discusses this important movement as a whole for the first time. He explores the ways in which the three philosophers can be connected, and applies their ideas to contemporary problems in the philosophy of mind and the philosophy of science - in particular the relation of sensations to brain processes, and the problem of constructing extended bodies in space and time from particular events and causal relations.

The Realistic Empiricism of Mach, James, and Russell

The rise of scientific (analytic) philosophy since the turn of the twentieth century is linked to the philosophical interaction between, on the one hand, Ernst Mach, the Vienna Circle around Moritz Schlick and Otto Neurath, the Berlin Group (Hans Reichenbach, Carl G. Hempel), and the Prague Group (Rudolf Carnap, Philipp Frank), and, on the other, philosophers and scientists in Denmark (Niels Bohr, Joergen Joergensen), Finland (Eino Kaila, Georg Henrik von Wright and their disciples), Norway (Arne Næss and his students), and Sweden (Åke Petzäll, the journal *Theoria* and a younger generation of philosophers in Uppsala). In addition, the pure theory of law of Hans Kelsen achieved wide dissemination in the Nordic countries (through, for example, Alf Ross). One of the key events in the relations between the Central European philosophers and those of the Nordic countries was the Second International Congress for the Unity of Science which was arranged in Copenhagen in 1936. Besides considering the interactions of these groups, the book also pays special attention to their interactions, in the context of the Cold War period following the Second World War, with the so-called Third Vienna Circle and with the Forum Alpbach/Austrian College around Viktor Kraft and Bela Juhos (along with Ludwig Wittgenstein and Paul Feyerabend), where the issues of (philosophical and scientific) realism and "psychologism"—the relationship between psychology and philosophy—were matters of controversy. By comparison with the more extensively investigated and better known transatlantic transfer and transformation of "positivism" and logical empiricism, the developments outlined above remain neglected and marginalized topics in historiography. The symposium aims to reveal the remarkable continuity of the philosophical enlightened "Nordic Connection". We intend to shed light on this forgotten communication and to reconstruct these hidden scholarly networks from an historical and logical point of view, thereby evaluating their significance for today's research.

The Vienna Circle in the Nordic Countries.

At the annual meeting of the American Association for the Advancement of Science in Washington, D.C., 27 December 1966, a symposium was held to commemorate the 50th anniversary of the death of Ernst Mach, the physicist who was vitally concerned about philosophical foundations. It was arranged by Section B on Physics, and co-sponsored by Section L on the History and Philosophy of Science, as well as by the History of Science Society. Dr. Allen W. Astin, Vice-President of the Association and Director of the National Bureau of Standards, presided. Representing the Austrian ambassador, Dr. Ernst Lemberger, a few opening remarks on his behalf were made by Dr. Walter Hietsch. Also present was Dr. Ernest A. Lederer, a grandson of Ernst Mach. The contributors, to the symposium, mostly physicists, represented different backgrounds and differing points of view; they presented their review of Mach's work primarily in the light of subsequent developments. They all, however, share a common interest in the life and works of Ernst Mach. Two of them, Otto Blühdorn and Peter G. Bergmann, received their doctoral degrees in theoretical physics from the University of Prague. Karl Menger received his doctoral degree in mathematics from the University of Vienna (he is responsible for the latest edition [1960] of Mach's celebrated *The Science of Mechanics: A Critical and Historical Account of its Development*, for which he prepared a new Introduction).

Ernst Mach: Physicist and Philosopher

This edited volume features essays written in honor of Ernst Mach. It explores his life, work, and legacy. Readers will gain a better understanding of this natural scientist and scholar who made major contributions to physics, the philosophy of science, and physiological psychology. The essays offer a critical inventory of Mach's lifework in line with state-of-the-art research and historiography. It begins with physics, where he paved the way for Einstein's Theory of Relativity. The account continues with Mach's contributions in biology, psychology, and physiology pioneering with an empiricist and gestalthaft Analysis of Sensations. Readers will also discover how in the philosophy of science he served as a model for the Vienna Circle with the Ernst Mach Society as well as paved the way for an integrated history and theory of science. Indeed, his influence extends far beyond the natural sciences -- to the Vienna Medical School and psychoanalysis (R. Bárány, J. Breuer, S. Freud), to literature (Jung, Wien, R. Musil), to politics (F. Adler, Austro-Marxism and the Viennese adult education), to arts between Futurism and Minimal Art as well as to social sciences between the liberal school (J. Schumpeter, F. A. von Hayek) and empirical social research (P. Lazarsfeld und M. Jahoda).

Ernst Mach – Life, Work, Influence

Ernst Mach -- A Deeper Look has been written to reveal to English-speaking readers the recent revival of interest in Ernst Mach in Europe and Japan. The book is a storehouse of new information on Mach as a philosopher, historian, scientist and person, containing a number of biographical and philosophical manuscripts published for the first time, along with correspondence and other matters published for the first time in English. The book also provides English translations of Mach's controversies with leading physicists and psychologists, such as Max Planck and Carl Stumpf, and offers basic evidence for resolving Mach's position on atomism and Einstein's theory of relativity. Mach's scientific, philosophical and personal influence in a number of countries -- Austria, Germany, Bohemia and Yugoslavia among them -- has been carefully explored and many aspects detailed for the first time. All of the articles are eminently readable, especially those written by Mach's sister. They are deeply researched, new interpretations abound, and the bibliography includes recent works by and about Mach from over a dozen countries. The book also contains many articles by or about Mach's contemporaries, including Ostwald, Dingler, Weichert and, especially, Einstein. Finally, and most intriguingly, the original ideas of Japanese scholars are presented, built on Mach's philosophy. These demonstrate how Mach's world view is currently contributing to the solution of contemporary philosophical problems.

Ernst Mach — A Deeper Look

This work discusses whether Kuhn's *The Structure of Scientific Revolutions* was revolutionary. Steve Fuller argues that Kuhn held a profoundly conservative view of science and how one ought to study its history.

Thomas Kuhn

In the twentieth century English-language philosophy came to be science- and logic-oriented, and was suspicious of metaphysics. *The Disappearance of the Soul and the Turn against Metaphysics* traces our present philosophical outlook back to debates in Austro-German philosophy about the relation between empirical science and metaphysics: does empirical psychology depend on the metaphysics of the soul, the mental substance? The negative answer - that there is 'a psychology without a soul' - shaped Austrian philosophy and provided a model for ontologies that dispense with substances. Mark Textor tells the story of how and why (Austrian) philosophy turned against metaphysics. He introduces the key thinkers of the time, including the 'fathers of Austrian philosophy' Franz Brentano and Ernst Mach, whose Intentionalism (Brentano) and Neutral Monism (Mach) became distinctive and influential positions in the philosophy of mind. Textor goes on to use the 'psychology without a soul' view as a vantage point from which to reconstruct and assess the immediate pre-history and formation of analytic philosophy (Ward, Stout, Moore, Russell). While Austrian philosophers retired the soul, early analytic philosophers were happy to introduce a successor, the subject, and conceive of the mental as constituted by subject-object relations. The final part of the book returns to the theme of anti-metaphysics from a different perspective. In this part the early Moritz Schlick, who would soon become the leading figure of the Vienna Circle, takes centre stage. The final part of the book reconstructs Schlick's arguments for the conclusion that metaphysics lies beyond the limits of knowledge that are rooted in the philosophy of mind discussed in previous parts.

The Disappearance of the Soul and the Turn against Metaphysics

This volume is dedicated to the life and work of Ernest Nagel (1901-1985) counted among the influential twentieth-century philosophers of science. Forgotten by the history of philosophy of science community in recent years, this volume introduces Nagel's philosophy to a new generation of readers and highlights the merits and originality of his works. Best known in the history of philosophy as a major American representative of logical empiricism with some pragmatist and naturalist leanings, Nagel's interests and activities went beyond these limits. His career was marked with a strong and determined intention of harmonizing the European scientific worldview of logical empiricism and American naturalism/pragmatism. His most famous and systematic treatise on, *The Structure of Science*, appeared just one year before Thomas Kuhn's even more renowned, *The Structure of Scientific Revolutions*. As a reflection of Nagel's interdisciplinary work, the contributing authors' articles are connected both historically and systematically. The volume will appeal to students mainly at the graduate level and academic scholars. Since the volume treats historical, philosophical, physical, social and general scientific questions, it will be of interest to historians and philosophers of science, epistemologists, social scientists, and anyone interested in the history of analytic philosophy and twentieth-century intellectual history.

Ernest Nagel: Philosophy of Science and the Fight for Clarity

Debates over relativism are as old as philosophy itself. Since the late nineteenth century, relativism has also been a controversial topic in many of the social and cultural sciences. And yet, relativism has not been a central topic of research in the history of philosophy or the history of the social sciences. This collection seeks to remedy this situation by studying the emergence of modern forms of relativism as they unfolded in the German lands during the "long nineteenth century"—from the Enlightenment to National Socialism. It focuses on relativist and anti-relativist ideas and arguments in four contexts: history, science, epistemology, and politics. *The Emergence of Relativism* will be of interest to those studying nineteenth- and twentieth-century philosophy, German idealism, and history and philosophy of science, as well as those in related disciplines such as sociology and anthropology.

The Emergence of Relativism

Philipp Frank (1884–1966) was an influential philosopher of science, public intellectual, and Harvard educator whose last book, *The Humanistic Background of Science*, is finally available. Never published in his lifetime, this original manuscript has been edited and introduced to highlight Frank's remarkable but little-known insights about the nature of modern science—insights that rival those of Karl Popper and Frank's colleagues Thomas Kuhn and James Bryant Conant. As a leading exponent of logical empiricism and a member of the famous Vienna Circle, Frank intended his book to provide an accessible, engaging introduction to the philosophy of science and its cultural significance. The book is steadfastly true to science; to aspirations of peace, unity, and human flourishing after World War II; and to the pragmatic philosophies of Charles S. Peirce, William James, and John Dewey that Frank embraced in his new American home. Amidst the many recent surveys and retrospective analyses of

midcentury philosophy of science, *The Humanistic Background of Science* offers an original, first-hand view of Frank's post-European life and of intellectual dramas then unfolding in Chicago, New York City, and Boston.

The Humanistic Background of Science

Ether and Modernity offers a snapshot of the status of an epistemic object, the "ether" (or "aether"), in the early twentieth century. The contributed papers show that the ether was often regarded as one of the objects of modernity, hand in hand with the electron, radioactivity or X-rays, and not simply as the stubborn residue of an old-fashioned, long-discarded science. The prestige and authority of scientists and popularisers like Oliver Lodge and Arthur Eddington in Britain, Phillip Lenard in Germany or Dayton C. Miller in the USA was instrumental in the preservation, defence or even re-emergence of the ether in the 1920s. Moreover, the consolidation of wireless communications and radio broadcasting, indeed a very modern technology, brought the ether into audiences that would otherwise never have heard about such an esoteric entity. The ether also played a pivotal role among some artists in the early twentieth century: the values of modernism found in the complexities and contradictions of modern physics, such as wireless action or wave-particle puzzles, a fertile ground for the development of new artistic languages; in literature as much as in the pictorial and performing arts. Essays on the intellectual foundations of Umberto Boccioni's art, the linguistic techniques of Lodge, and Ernst Mach's considerations on aesthetics and physics witness to the imbricate relationship between the ether and modernism. Last but not least, the ether played a fundamental part in the resurgence of modern spiritualism in the aftermath of the Great War. This book examines the complex array of meanings, strategies and milieus that enabled the ether to remain an active part in scientific and cultural debates well into the 1930s, but not beyond. This portrait may be easily regarded as the swan song of an epistemic object that was soon to fade away as shown by Paul Dirac's unsuccessful attempt to resuscitate some kind of aether in 1951, with which this book finishes.

Ether and Modernity

First published in 1993. Routledge is an imprint of Taylor & Francis, an informa company.

Pseudo-Problems

This book features papers on the history and philosophy of science. It also includes related reviews of recent research literature on Rudolf Carnap, Eino Kaila, Ernst Mach, and Otto Neurath. The central idea behind this volume is that this distinctive field is both historical and philosophical at the same time. Good history and philosophy of science is not just history of science into which some philosophy of science may enter. On the other hand, it is neither philosophy of science into which some history of science may enter. The founding insight of this modern research discipline is that history and philosophy have a special affinity and one can effectively advance both simultaneously. The selection of contributions collected in this volume are good examples and best practices for these claims. In addition, it includes illuminating case studies. It will appeal to scholars in the history of and philosophy of science, especially history and philosophy of physics and biology, as well as economics, extended evolution, and the history of knowledge.

Integrated History and Philosophy of Science

Adolf Grünbaum is one of the giants of 20th century philosophy of science. This volume is the first of three collecting his most essential and highly influential work. The essays collected in this first volume focus on three related areas. They discuss scientific rationality-the problem of what it takes for a theory to be called scientific, and ask whether it is plausible to draw a clear distinction between science and non-science as was famously proposed by Karl Popper. They delve into the debate between determinism and indeterminism, in both science and in the humanities. Grünbaum defends the position of the Humane Determinist, which then leads to a thorough criticism of the current theological approaches to ethics and morality-where Grünbaum defends an explicit Secular Humanism-as well as of prominent theistic interpretations of twentieth century physical cosmologies. The second volume is devoted to Grünbaum's writings on the Philosophy of Physics and Space-Time, and the third to his lectures on the Philosophy of Psychology and Psychoanalysis, including his 1985 Gifford Lectures, which are to be published for the first time.

Collected Works, Volume I

After his failure to replace metaphysics by a linguistic approach, Ludwig Boltzmann came to identify the philosophy of science with methodology which, in turn, he considered to be part of science itself, and thus not part of philosophy at all. His definition of philosophy as metaphysics meant that, from his point of view, all philosophers were metaphysicians, himself included. Boltzmann the philosopher was advised on the improvement of his *Weltanschauung* by Franz Brentano; to such effect that, by the summer of 1905, Boltzmann appeared to be close to a form of critical realism. However, the stronger this realism became, the more inconsistent it seemed to be with his 'Mach plus pictures' methodology of science. During this period, he planned to write a book, first on metaphysics and then later on what he called 'A priori probability' and what he considered to be its shortcomings. Apparently, the book was never completed. All know Boltzmann the great physicist. Much less widely known is that he was an original philosopher: one who had a great impact on early 20th Century Viennese philosophy, beginning with Wittgenstein and the Vienna Circle and extending even to Popper and Feyerabend. Blackmore's delving into Boltzmann's correspondence, coupled with his unparalleled knowledge of Boltzmann's final years, allows him to present Boltzmann in an entirely new light to readers in the English language. For physicists, philosophers and historians.

Ernst Mach's World Elements

Schumpeter, F.A. von Hayek) and empirical social research (P. Lazarsfeld und M. Jahoda).

Ludwig Boltzmann: His Later Life and Philosophy, 1900-1906

A distinguished mathematician traces the history of science, illustrating philosophy's ongoing role, explaining technology's erosion of the rapport between the two fields, and offering suggestions for their reunion. 1962 edition.

Ernst Mach - Life, Work, Influence

Twenty-nine collected essays represent a critical history of Shakespeare's play as text and as theater, beginning with Samuel Johnson in 1765, and ending with a review of the Royal Shakespeare Company production in 1991. The criticism centers on three aspects of the play: the love/friendship debate.

Philosophy of Science

A lively and accessible history of Modernism, *The First Moderns* is filled with portraits of genius, and intellectual breakthroughs, that richly evoke the fin-de-siècle atmosphere of Paris, Vienna, St. Louis, and St. Petersburg. William Everdell offers readers an invigorating look at the unfolding of an age. "This exceptionally wide-ranging history is chock-a-block with anecdotes, factoids, odd juxtapositions, and useful insights. Most impressive. . . . For anyone interested in learning about late 19th- and early 20th- century imaginative thought, this engagingly written book is a good place to start."—Washington Post Book World "The First Moderns brilliantly maps the beginning of a path at whose end loom as many diasporas as there are men."—Frederic Morton, *The Los Angeles Times Book Review* "In this truly exciting study of the origins of modernist thought, poet and teacher Everdell roams freely across disciplinary lines. . . . A brilliant book that will prove useful to scholars and generalists for years to come; enthusiastically recommended."—Library Journal, starred review "Everdell has performed a rare service for his readers. Dispelling much of the current nonsense about 'postmodernism,' this book belongs on the very short list of profound works of cultural analysis."—Booklist "Innovative and impressive . . . [Everdell] has written a marvelous, erudite, and readable study."—Mark Bevir, *Spectator*

"A richly eclectic history of the dawn of a new era in painting, music, literature, mathematics, physics, genetics, neuroscience, psychiatry and philosophy."—Margaret Wertheim, *New Scientist* "[Everdell] has himself recombined the parts of our era's intellectual history in new and startling ways, shedding light for which the reader of *The First Moderns* will be eternally grateful."—Hugh Kenner, *The New York Times Book Review* "Everdell shows how the idea of "modernity" arose before the First World War by telling the stories of heroes such as T. S. Eliot, Max Planck, and Georges Serault with such a lively eye for detail, irony, and ambiance that you feel as if you're reliving those miraculous years."—Jon Spayde, *Utne Reader*

The Emergence of Logical Empiricism

Continental philosophy is one of the twentieth century's most important and challenging philosophical movements. This major volume includes fourteen chapters on its major representatives and schools, including phenomenology, existentialism and postmodernism.

The First Moderns

This anthology of selections from the works of noted philosophers affords the student an immediate contact with the unique historical background of the philosophy of science. The selections, many of which have not been readily accessible, follow the development of the philosophy of science from 1786 to 1927. Each selection is preceded by a brief introduction by the editor designed to familiarize the reader with a particular philosopher and provide insights into his work. Joseph J. Kockelmans divides the selections into several sections. Part 1, from 1786-1850, includes chapters by Immanuel Kant, on the metaphysical foundations of natural science, John Frederick William Herschel, on experience and the analysis of phenomena, William Whewell, on the nature and conditions of inductive science, and John Stuart Mill, on induction and the law of universal causation; part 2, from 1870-1899, includes chapters by Hermann Von Helmholtz, on the origin and significance of geometrical axioms, William Stanley Jevons, on the philosophy of inductive inference, John Bernard Stallo, on the kinetic theory of gasses and the conditions of the validity of scientific hypotheses, Ernst Mach, on the economical nature of physical inquiry, Karl Pearson, on perceptual and conceptual space, Emile Boutroux, on mechanical laws, Heinrich Hertz, on the appropriateness, correctness, and permissibility of scientific theories, and Ludwig Boltzmann, on the fundamental principles and basic equations of mechanics. The third part, covering the first decade of the twentieth century, includes chapters by Henri Jules Poincare, on science and reality, Charles Peirce, on Induction, Pierre Marie Duhem, on the laws of physics, William Ostwald, on energetism and mechanics, Emile Meyerson, on identity of thought and nature as the final goal of science, Ernst Cassirer, on functional concepts of natural science; part 4, from 1910-1927, includes chapters by Charles Dunbar Broad, on phenomenalism, Alfred North Whitehead, on time, space, and material, Bertrand Russell, on the world of physics and the world of sense, Norman Robert Cambbell, on the meaning of science, Moritz Schlick, on basic issues of the philosophy of natural science, and Percy Williams Bridgman, on the concepts of space, time, and causality. *Philosophy of Science* provides a concise single volume text to the discipline and enables students to understand and evaluate the various trends in our contemporary philosophy of science. Joseph J. Kockelmans is professor emeritus of philosophy at the Pennsylvania State University.

Continental Philosophy in the 20th Century

Modern physical science is constituted by specialized scientific fields rooted in experimental laboratory work and in rational and mathematical representations. Contemporary scientific explanation is rigorously differentiated from religious interpretation, although, to be sure, scientists sometimes do the philosophical work of interpreting the metaphysics of space, time, and matter. However, it is rare that either theologians or philosophers convincingly claim that they are doing the scientific work of physical scientists and mathematicians. The rigidity of these divisions and differentiations is relatively new. Modern physical science was invented slowly and gradually through interactions of the aims and contents of mathematics, theology, and natural philosophy since the seventeenth century. In essays ranging in focus from seventeenth-century interpretations of heavenly comets to twentieth-century explanations of tracks in bubble chambers, ten historians of science demonstrate metaphysical and theological threads continuing to underpin the epistemology and practice of the physical sciences and mathematics, even while they became disciplinary specialties during the last three centuries. The volume is prefaced by tributes to Erwin N. Hiebert, whose teaching and scholarship have addressed and inspired attention to these issues.

Philosophy of Science

This volume combines the theoretical and historical perspective focusing on the specific features of a European philosophy of science. On the occasion of the 20th anniversary of the Institute Vienna Circle the Viennese roots and influences will be addressed, in addition. There is no doubt that contemporary philosophy of science originated mainly in Europe beginning in the 19th century and has influenced decisively the subsequent development of globalized philosophy of science, esp. in North America. Recent research in this field documents some specific characteristics of philosophy of science covering the natural, social, and also cultural sciences in the European context up to the destruction and forced migration caused by Fascism and National Socialism. This European perspective with the integration of history and philosophy of science and the current situation in the philosophy of science after the transatlantic interaction and transformation, and the "return" after World War II raises the question of contemporary European characteristics in the philosophy of science. The role and function of the renowned Vienna Circle of Logical Empiricism and its impact and influence on contemporary philosophy of science is on the agenda, too. Accordingly, the general topic is dealt with in two parallel sessions representing systematic-formal as well as genetic-historical perspectives on philosophy of science in a European context up to the present.

The Invention of Physical Science

Nobel laureate Erwin Schrödinger was one of the most distinguished scientists of the twentieth century; his lectures on the history and philosophy of science are legendary. 'Nature and the Greeks' and 'Science and Humanism' makes available for the first time in many years the text of two of Schrödinger's most famous lecture series. 'Nature and the Greeks' offers a comprehensive historical account of the twentieth-century scientific world picture, tracing modern science back to the earliest stages of Western philosophic thought. 'Science and Humanism' addresses some of the most fundamental questions of the century: what is the value of scientific research? and how do the achievements of modern science affect the relationship between material and spiritual matters? A foreword by Roger Penrose sets the lectures in a contemporary context, and affirms they are as relevant today as when they were first published.

European Philosophy of Science - Philosophy of Science in Europe and the Viennese Heritage

This Biographical Dictionary provides detailed accounts of the lives, works, influence and reception of thinkers from all the major philosophical schools and traditions of the twentieth-century. This unique volume covers the lives and careers of thinkers from all areas of philosophy - from analytic philosophy to Zen and from formal logic to aesthetics. All the major figures of philosophy, such as Nietzsche, Wittgenstein and Russell are examined and analysed. The scope of the work is not merely restricted to the major figures in western philosophy but also covers in depth a significant number of thinkers from the near and far east and from the non-European Hispanic-language communities. The Biographical Dictionary also includes a number of general entries dealing with important schools of philosophy, such as the Vienna Circle, or currents of thought, such as vitalism. These allow the reader to set the individual biographies in the context of the philosophical history of the period. With entries written by over 100 leading philosophy scholars, the Biographical Dictionary is the most comprehensive survey of twentieth-century thinkers to date. Structure The book is structured alphabetically by philosopher. Each entry is identically structured for ease of access and covers: * nationality * dates and places of birth and death * philosophical style or school * areas of interest * higher education * significant influences * main appointments * main publications * secondary literature * account of intellectual development and main ideas * critical reception and impact At the end of the book a glossary gives accounts of the schools, movements and traditions to which these philosophers belonged, and thorough indexes enable the reader to access the information in several ways: * by nationality * by major areas of contribution to philosophy e.g. aesthetics * by major influences on the thinker concerned e.g. Plato, Kant, Wittgenstein

'Nature and the Greeks' and 'Science and Humanism'

The philosophy of science as it is known today emerged out of a combination of three traditional concerns: the classification of the sciences, methodology and the philosophy of nature. Included in the series Works in the Philosophy of Science 1830-1914 are all three of these interrelated areas. The titles should be of interest to both the philosopher of science and to the historian of ideas. The former will be able to trace present-day concerns back to their origins; the latter should find it a useful source for the study of Victorian conceptions of science.

Biographical Dictionary of Twentieth-Century Philosophers

This volume is the first English resource to shed light on the philosophy of Joseph Petzoldt (1862-1929), the main pupil of Ernst Mach and founder of the Gesellschaft für wissenschaftliche Philosophie, later the association of Berlin logical positivists. A central figure in the early debate on the theory of relativity, his work was praised by Einstein himself. Tracing the development of Petzoldt's ideas, starting from his early acceptance of materialism and Kantian agnosticism, Chiara Russo Krauss presents a comprehensive reconstruction of his philosophy in the context of the German milieu. She examines his attempt to develop a new philosophy following Gustav Fechner and the empiriocriticism of Richard Avenarius and Ernst Mach. In the final chapter, she sets out how Petzoldt proposed relativistic positivism as the official interpretation of Einstein's relativity. By illuminating key elements of Petzoldt's work, this is a valuable case study for students and scholars of philosophy of science and late 19th-century and early 20th-century philosophy. It reveals the complex interplay of two different tendencies of the time: neo-Kantianism and its struggle to overcome the notion of thing-in-itself, as well as the need for an epistemological foundation for the new advances of science.

Analysis of Sensations

Burt's book, *The Metaphysical Foundations of Modern Physical Science*, is something of a puzzle within the context of twentieth-century intellectual history, especially American intellectual history. Burt's pioneering study of the scientific revolution has proved to prophetic in its rejection of both scientism and positivism. Published in 1924, Burt's book continues to be read in educated circles and remains both the rose and the thorn on university reading lists, raising skeptical questions about science methods and science knowledge just as it did seventy-five years ago. This book examines Burt's public, academic and personal life. From his politics of conscience after World War I on through the Cold War Burt is shown to be a man of unparalleled integrity, whose relentless search for philosophic understanding drove his more quixotic philosophical quests and steered his personal life, including its tragic dimension, toward simple virtue. The many who have been affected by *The Metaphysical Foundations* will be especially interested in this new perspective on the life and thought of its author. Those who have not read Burt's books might be inspired to study this unusual American thinker.

The Philosophy of Joseph Petzoldt

Phenomenalism, Phenomenology and the Question of Time: A Comparative Study of the Theories of Mach, Husserl, and Boltzmann explores comparative analysis of the concept of phenomenology in relation to Mach's, Boltzmann's and Husserl's works on time. It also explores whether or not phenomenology can be naturalized and the scope of its relation to the question of time, experience, physical processes, and irreversibility.

E.A. Burt, Historian and Philosopher

This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1972.

Phenomenalism, Phenomenology, and the Question of Time

More than any other major twentieth-century writer, Pierre Duhem has been the victim of ill-informed guesswork. For instance, many references to Duhem stress the importance of his Catholic faith, but nearly all of them draw the obvious-and entirely erroneous-conclusions about the role of Catholicism in Duhem's thinking. This book pays particular attention to the political and intellectual context of French Catholicism, wracked as it was by the tensions of Dreyfus affair and the so-called modernist crisis. Duhem took his inspiration, not from the papally-sponsored revival of the thought of St. Thomas Aquinas, but from Pascal, a fact that aroused suspicions of skepticism in the minds of conservative Catholics. The tensions between Duhem's work and authoritarian Catholic positions became more explicit as his historical work unfolded. Most famous for his denial of the possibility of a crucial experiment which could unambiguously decide between contending scientific theories, Duhem has often been interpreted as a mere instrumentalist or conventionalist, denying the meaningfulness of a reality behind the theory. Dr. Martin shows that Duhem was a Pascalian who argued for both logic and intuition as indispensable in approaching the truth. Duhem argues that physics could not

legitimately be used to attack Christianity, but he held that physics was equally useless for the defense of Christianity, a position which made him unpopular with many Catholics. Duhem is now well-known for his historical work refuting the myth that there was no medieval science. Duhem demonstrated that figures like Leonardo and Galileo were not isolation pioneers; far from being the founders of a new science, they were continuing a tradition of scientific work that had been developing for centuries. It has been surmised that Duhem was predisposed to rehabilitate medieval science for apologetic motives. Martin shows that Duhem's discovery of medieval science can be dated to within a month, and came as a complete surprise to him, changing the whole course of his work, and introducing an abrupt discontinuity between his earlier and his later preoccupations. Furthermore, Duhem's findings in medieval intellectual history have proved indigestible ever since, to believers and unbelievers alike.

Ernst Mach

Recovering a lost world of the politics of science in Imperial Germany, Gregory B. Moynahan approaches the life and work of the philosopher and historian Ernst Cassirer (1874–1945) from a revisionist perspective, using this framework to redefine the origins of twentieth-century critical historicism and critical theory. The only text in English to focus on the first half of the polymath Cassirer's career and his role in the Marburg School, this volume illuminates one of the most important – and in English, least-studied – reform movements in Imperial Germany.

Pierre Duhem

Columbia Companion to Twentieth-Century Philosophies is the first guide to cover both the Anglo-American analytic and European Continental traditions. The first section features Nicholas Rescher writing on neoidealism, Josephine Donovan commenting on feminist philosophy, Tyler Burge discussing the philosophy of language and mind, and Robert Hanna reflecting on Kant's legacy. The second section presents Jean Grondin on hermeneutics, Leonard Lawlor on phenomenology, Charles Scott on postmodernism, and Babette Babich on the philosophy of science. The volume also covers logical positivism, naturalism, pragmatism, aesthetics, existentialism, Marxism, the Frankfurt School, structuralism, psychoanalysis, political philosophy, ethics, and the philosophy of religion. The final section addresses concurrent trends in Indian, Chinese, Japanese, and African philosophy, and a comprehensive introduction by Constantin V. Boundas not only provides a thorough outline of the problems and issues of the analytic and Continental traditions but also boldly challenges the conviction that the two approaches must be rivals. Offering an unusually panoramic perspective, the Columbia Companion to Twentieth-Century Philosophies enables readers to encounter foundational materials on their own terms.

I've worked on the site for many years, for decades

These warriors are all life-sized like real soldiers

You can tell from their hair style, their head gear, you can tell that they are different ranks

The Terracotta Warriors were found accidentally

Originally in ancient China 3000 years ago they believed in the afterlife

What we discovered in pit three, very surprisingly, we found well preserved colours

When we lifted one Terracotta Warrior the very bright colours stuck to the soil

Very bright bright red and pink, blue, green

That's really revolutionary, that kind of technology, 2000 years ago in Qin dynasty times
