Exploring English Grammar Level E Teacher's Edition

Excerpt from Principles of English Composition Through Analysis and Synthesis: A Text Book for the Senior Classes of Elementary Schools and for Pupil-Teachers As a means of teaching composition and the principles that govern sentence structure, analysis of sentences has completely broken down and become, outside the teaching profession, entirely discredited. Pupils parse and parse, analyse and analyse, for years of their school life, and in the end are ignorant of what constitutes a good sentence and wholly without ability to write one. The cause of this unsatisfactory result is not, I think, difficult to discover. The parsing of single words, however well done, can be made to bear only on the syntax of single words - quite a trifle in sentence structure. Analysis, however, includes single words, phrases, and clauses - the whole mechanism of the sentence however complex, and, of course, ought to bear on the syntax of the whole mechanism; but unfortunately it has been made by the books to concern itself only with breaking down and classifying. Its sole aim has been to dismember the sentence and to place the disjecta membra under their appropriate headings. This is all very well from the point of view that decomposition and classification are the sole end of grammar; but ought they to be so regarded? Is not synthesis as important as analysis? Is it not necessary that the young student should be trained not only to decompose and classify, but also to compose, that is, to arrange words, phrases, and clauses in their most effective setting? Treatment of Error offers a realistic, well-reasoned account of what teachers of multilingual writers need to know about error and how to put what they know to use. As in the first edition, Ferris again persuasively addresses the fundamental error treatment questions that plague novice and expert writing specialists alike: What types of errors should teachers respond to? When should we respond to them? What are the most efficacious ways of responding to them? And ultimately, what role should error treatment play in the teaching of the process of writing? The second edition improves upon the first by exploring changes in the field since 2002, such as the growing diversity in what is called “L2 writers,” the blurring boundaries between “native” and “non-native” speakers of English, the influence of

genre studies and corpus linguistics on the teaching of writing, and the need the move beyond “error” to “second language development” in terms of approaching students and their texts. It also explores what teacher preparation programs need to do to train teachers to treat student error. The second edition features * an updating of the literature in all chapters * a new chapter on academic language development * a postscript on how to integrate error treatment/language development suggestions in Chapters 4-6 into a writing class syllabus * the addition of discussion/analysis questions at the end of each chapter, plus suggested readings, to make the book more useful in pedagogy or teacher development workshops
