Beyond Oligarchy

Beyond Oligarchy is a collection of essays by leading scholars of contemporary Indonesian politics and society, each addressing effects of material inequality on political power and contestation in democratic Indonesia. The contributors assess how critical concepts in the study of politics—oligarchy, inequality, power, democracy, and others—can be used to characterize the Indonesian case, and in turn, how the Indonesian experience informs conceptual and analytical debates in political science and related disciplines. In bringing together experts from around the world to engage with these themes, Beyond Oligarchy reclaims a tradition of focused intellectual debate across scholarly communities in Indonesian studies. The collapse of Indonesia's New Order has proven a critical juncture in Indonesian political studies, launching new analyses about the drivers of regime change and the character of Indonesian democracy. It has also prompted a new groundswell of theoretical reflection among Indonesianists on concepts such as representation, competition, power, and inequality. As such, the onset of Indonesia's second democratic period represents more than just new point of departure for comparative analyses of Indonesia as a democratizing state; it has also served as a catalyst for theoretical and conceptual development.

Microsoft Windows Server is a multi-purpose server designed to increase reliability and flexibility of a network infrastructure. Windows Server is the paramount tool used by enterprises in their datacenter and desktop strategy. The most recent versions of Windows Server also provide both server and client virtualization. Its ubiquity in the enterprise results in the need for networking professionals who know how to plan, design, implement, operate, and troubleshoot networks relying on Windows Server. Microsoft Learning is preparing the next round of its Windows Server Certification program with exams covering the new version of the software, Windows Server 2012. The exams and certification path change significantly from the previous version of Windows Server. This provides an opportunity for the MS line to capitalize on the dual disruption of brand-new software and brand-new certifications.

Abstract: "There is a growing concern that the wide use of encryption may be more dangerous than helpful to society. In particular, good encryption schemes make court-authorized line-tapping, an effective tool for law enforcement, impossible. Addressing this concern, we show how to construct cryptosystems in a fair way, that is, so as to allow a democratic country to strike the desired balance between the needs of the Government and those of the Citizens. Fair cryptosystems enjoy the following properties: (1) they cannot be misused by criminal organizations and (2) they guarantee to the Citizens exactly the same rights to privacy they currently have under the law. We actually show how to transform any cryptosystem into a fair one. The transformed systems preserve the security and efficiency of the original ones. Thus one can still use whatever system he believes to be more secure, and enjoy the additional properties of fairness. Moreover, for today's best known cryptosystems, our transformation is particularly efficient and convenient. Our solution compares favorably with the Clipper Chip, the encryption proposal more recently put forward by the Clinton Administration for solving similar problems. In particular, our solution (a) allows citizens to choose whatever algorithms they prefer and all of their secret keys, (b) can be efficiently and securely implemented in software, and (c) ensures that any court-authorized line-tapping ends at the prescribed time."

CISSP All-in-One Exam Guide, Eighth Edition

History matters. At the beginning of a new century and amidst the turmoil of a new democracy, a historical perspective on modern Indonesia is needed more than ever. This innovative economic

history connects back to the colonial era and helps to explain why the transition from colonialism to Independence and from the New Order to democracy has been so difficult and sometimes traumatic. The Emergence of a National Economy identifies three grand themes in this transformation: globalisation, state formation and economic integration. Globalisation affected the Indonesian archipelago even before the arrival of the Dutch—the New Order experience was only the most recent wave. Modern state formation began in Java under Governor-General Daendels (1808-11) and culminated in the centralised, military-bureaucratic state of Soeharto's New Order (1966-98). A national economy emerged gradually from the 1930s as the Outer Islands were reoriented towards an industrialising Java. These three themes link chronological chapters from the pre 1800 period through the modern colonial era to the breakdown of the colonial system after 1930, the birth of modern Indonesia, the remarkable economic transformation under the New Order, and the 'meltdown' during the Asian crisis of 1997/98. This overarching story gives a unity and rhythm to Indonesia's modern history, while helping to explain why the future is likely to be different. The four authors—senior scholars from Australia (Howard Dick), Germany (Vincent Houben), the Netherlands (Thomas Lindblad) and Indonesia (Thee Kian Wie)—draw on a very wide range of sources to combine the insights of history, economic history and economics.

Investigative Uses of Technology

Every company or business establishment aims at making more sales than the competitor. Different strategies of ensuring effective marketing are put in place often. However, over the past years, things seem to have changed a lot. Unlike in the past when marketing was done based on the old strategies, things have already taken a new path, and modernization is gradually dominating. This has seen businesses and other establishments adapt to the different strategies of marketing, with the hope of making landmark strides in development. Innovation is among the key moves that companies are taking today. The main intention of embracing innovation is to ensure that companies are able to maneuver through the market landscape and still emerge authoritative. Over the years, innovation has really grown and more companies are embracing the same just to make sure that their progress is in the right direction. In most cases, innovation is motivated by the growing technology. Marketers develop and grow ideas based on the technological innovations that have been taking place globally. The value of innovation remains undisputed and that is not about to change. In as much as innovation remains as a key priority for businesses, there are marketers who do not have an idea of what the wave of innovation is all about. As unfortunate as that may sound, the same truth remains. There has been the need to inform the world of what innovation is all about and what can be done to facilitate goal achievement in any business. We must appreciate that innovation is here to stay. It is a force that cannot be denied at all. It is something that any business needs to make strides towards the right direction. It is a necessary force. Having noted that, business organizations are left with absolutely no choice than to consider innovation as part of their operations. Any other marketer out there is gradually adapting to innovate and this must reflect across the board. The focus of this book is to equip prospective, budding, and existing marketers with all the necessary knowledge on how they can marry innovation and marketing in order to improve results. We appreciate the fact that most marketers out there are in the hunt for information on innovation. It is for this reason that this book came to existence. All content found here is beneficial to marketers in the sense that it directs them towards the modern trends of innovation. The author of this book has a rich background in marketing. This means that all content in the book is justified from a professional point of view. The book is built around facts and justified information, hence offering an assurance to the readers that what they are about to read is indeed focused towards the right direction. Developing good marketing and subsequent good returns in businesses is a fundamental requirement of any business what wishes to progress well in the long run.

The 52 experiments in this well-conceived manual illustrate important concepts and principles in general, organic, and biochemistry. As in previous editions, three basic goals guided the development of all the experiments: (1) the experiments illustrate the concepts learned in the classroom; (2) the experiments are clearly and concisely written so that students will easily understand the task at hand, will work with minimal supervision because the manual provides enough information on experimental procedures, and will be able to perform the experiments in a 2 1/2-hour laboratory period; and, (3) the experiments are not only simple demonstrations, but also contain a sense of discovery. This edition includes many revised experiments, as well as three completely new experiments: ethanol from sucrose, isolation of DNA from onions, and neurotransmission as an example of enzyme specificity.
