The Chaos Frontier

The Chaos Frontier: Creative Strategic Control for Business presents the effective ways of managing and controlling innovative organizations in chaotic times. This book discusses the theories of chaos and self-organization developed by mathematicians, biologists, chemists, and physicists. Organized into four parts encompassing 13 chapters, this book begins with an overview of the scientific sense of chaos

as those systems driven by certain types of perfectly orderly laws capable of behaving in a manner that is random and therefore inherently unpredictable over the long term. This text then examines the key elements that managers need to incorporate into a dynamic model of managing if they are to design effective actions in a turbulent business world. Other chapters consider organizational effectiveness and the ability to sustain competitive capability. The final chapter deals with creative interaction between a business and the other organizations and people that are its environment. This book is a valuable resource for managers.

Nonlinear Dynamics and Chaos: Advances and Perspectives

This book is a collection of papers contributed by some of the greatest names in the areas of chaos and nonlinear dynamics. Each paper examines a research topic at the frontier of the area of dynamical systems. As well as reviewing recent results, each paper also discusses the future perspectives of each topic. The result is an invaluable snapshot of the state of the field by some of the most important researchers in the area. The first contribution in this book (the section entitled "How did you get into Chaos?") is actually not a paper, but a collection of personal accounts by a number of participants of the conference held in Aberdeen in September 2007 to honour Celso Grebogi's 60th birthday. At the instigation of James Yorke, many of the most well-known scientists in the area agreed to share their tales on how they got involved in chaos during a celebratory dinner in Celso's honour during the conference. This was recorded in video, we felt that these accounts were a valuable historic document for the field. So we decided to transcribe it and include it here as the first section of the book.

The New Frontier of Network Physiology: From Temporal Dynamics to the Synchronization and Principles of Integration in Networks of Physiological Systems

Shipworld! For John Bandicut, Earth is but a memory. Stranded at the edge of the galaxy in a structure populated with beings from a thousand worlds, Bandicut finds unexpected friends—only to be caught up in a cascade of forces that threaten the Shipworld itself. Confronting an entity known as the boojum, Bandicut discovers greater peril than ever in his journey into the unknown. Volume 2 of The Chaos Chronicles, from the Nebula-nominated author of Eternity's End. Original print publication by Tor Books. **REVIEWS:** "A dazzling, thrilling, innovative space opera...probably Carver's best effort to date." —Kirkus Reviews "An irresistibly readable story line reinforced by fascinating speculative science. Readers who come this far will be hooked for the series' duration." —Booklist "Carver's latest novel showcases his own fertile imagination and his talent for creating a host of engagingly sympathetic characters." —Library Journal "Carver is at his rousing best in this wild ride into the heart of an enigmatic world beyond the Milky Way. This is science fiction out at the frontier. Maybe beyond the frontier." —Jack McDevitt

Strange Attractors

This book discusses the outcomes of more than ten years of research in the southern tracts of the Amazon region, and addresses the expansion of the agricultural frontier, consolidation of the agribusiness-based economy, and expansion of regional infrastructure (roads, dams, urban centres, etc). It combines extensive empirical evidence with the international literature on frontier-making and regional Amazonian development, and adopts a critical politico-geographical perspective that will benefit scholars in various other disciplines. This book is intended to push the current theoretical and methodological boundaries regarding the controversies and impacts of agribusiness in the region. A new international scientific network, led by the author, is investigating the broader context of the themes analysed here.

Frontier Making in the Amazon

A crucified scientist ignites a global chase. When famed geneticist Gustave Vestrier is crucified in front of the White House, his protégée Maurya Shah navigates a tangled web of riddles and lies, hoping to uncover the dangerous truth about his research. An atheist who distances herself from her Jain heritage, Maurya joins her seminarian friend Thomas to navigate an increasingly religious maze laid by her mentor. Pursued by a woman calling herself Hell, Maurya and Thomas encounter the Foundation, a secret group of scientists who push every frontier. The Foundation revives Thomas's sister from the dead using Vestrier's methods. However, the scientist has done more than anyone realizes. Strange towers appear across the globe, terrifying nations. Maurya and Thomas race against time, hoping to

uncover the so-called God gene, a DNA code buried in Renaissance art. The gene itself is part of a puzzle that threatens all humanity.

Pillars of Chaos

Dr. Vincent Hume was a charismatic physician, gifted with legendary talents for healing the sick. But there was a mysterious component to his personality, an element of the streets that ran counter to his pedestal position in the frontier Alaska community he served. Over the course of a decade, the origins of his street smarts, combined with a progressive illness and tragic personal events, conspired in his undoing. It was an excruciating public downfall of a respected surgeon, husband, father, friend, and neighbor; a downfall that ignited a public uproar that threatened the very fabric of the small, close knit community.

Cures and Chaos

Explores a little-known history of exchange between Anishinaabe and American writers, showing how literature has long been an important venue for debates over settler colonial policy and indigenous rights. For the Anishinaabeg—the indigenous peoples of the Great Lakes—literary writing has long been an important means of asserting their continued existence as a nation, with its own culture, history, and sovereignty. At the same time, literature has also offered American writers a way to make the Anishinaabe Nation disappear, often by relegating it to a distant past. In this book, Adam Spry puts these two traditions in conversation with one another, showing how novels, poetry, and drama have been the ground upon which Anishinaabeg and Americans have clashed as representatives of two nations contentiously occupying the same land. Focusing on moments of contact, appropriation, and exchange, Spry examines a diverse range of texts in order to reveal a complex historical network of Native and non-Native writers who read and adapted each other's work across the boundaries of nation, culture, and time. By reconceiving the relationship between the United States and the Anishinaabeg as one of transnational exchange, *Our War Paint Is Writers' Ink* offers a new methodology for the study of Native American literatures, capable of addressing a long history of mutual cultural influence while simultaneously arguing for the legitimacy, and continued necessity, of indigenous nationhood. In addition, the author reexamines several critical assumptions—about authenticity, identity, and nationhood itself—that have become common wisdom in both Native American and US literary studies. Adam Spry is Assistant Professor of Writing, Literature, and Publishing at Emerson College.

Our War Paint Is Writers' Ink

A lively time capsule, this brilliant chronicle explores and illuminates the ways in which technology has rearranged our world during the past ten years.

What Just Happened

Frontier Road uses the history of one road in southern Colombia—known locally as “the trampoline of death”—to demonstrate how state-building processes and practices have depended on the production and maintenance of frontiers as inclusive-exclusive zones, often through violent means. Considers the topic from multiple perspectives, including ethnography of the state, the dynamics of frontiers, and the nature of postcolonial power, space, and violence Draws attention to the political, environmental, and racial dynamics involved in the history and development of transport infrastructure in the Amazon region Examines the violence that has sustained the state through time and space, as well as the ways in which ordinary people have made sense of and contested that violence in everyday life Incorporates a broad range of engaging sources, such as missionary and government archives, travel writing, and oral histories

Frontier Road

The book explores the humanitarian sector's relationship with authority and humanitarian responses to situations of complex emergency.

Humanitarians on the Frontier

Is there a basic difference in thinking between Western and non-Western societies? This long-debated yet highly topical problem forms the central question to which distinguished contributors in the fields of psychology, linguistics, history, and sociology and, more particularly, of social anthropology and

philosophy, address themselves in this interdisciplinary collection. They are: Barry Barnes, Benjamin N. Colby and Michael Cole, Ruth Finnegan, Ernest Gellner, Robin Horton, J. M. Ita, Hilary Jenkins, Steven Lukes, Nobuhiro Nagashima, S. J. Tambiah, W. H. Whiteley, and Sybil Wolfram. The central ideas of this classic work are reformulated and refined in the various contributions with different possible dichotomies discussed such as: 'traditional/modern', 'industrial/non-industrial', or 'scientific/non-scientific', and 'thinking,' analyzed in terms of its thought processes, content, logic or social background. The material in the book, which is dedicated to Sir Edward Evans-Pritchard, falls within the general area of the comparative sociology of knowledge, and will thus particularly interest philosophers, social anthropologists, and sociologists. The volume is however conceived in an interdisciplinary spirit and will be of interest to anyone seriously concerned to examine the nature of thinking in our own and other societies.

Modes of Thought in Western and Non-Western Societies

In the past decade, complexity-based thinking has exerted an increasing, yet somewhat controversial authority over management theory and practice. This has in some part been due to the influence of a number of high-profile articles and the not inconsiderable hype which has accompanied them. Another feature of the subject's development has been the diversity of the origins of the thinking and the claims which have been made for it in terms of managerial and organizational implications. *Complexity and Organization* is the first text to bring this thinking together, presenting some of the most influential writing in the field, showing how the subject has developed and how it continues to influence managerial thinking. Seminal contributions to the field have been brought together in a single accessible volume, allowing readers to access what might otherwise appear a very diverse body of literature. Moreover, the editors, who represent some of the leading thinkers and writers in this field, have combined these readings with a unique commentary, indicating not only the importance of the papers but teasing out the subtle but significant differences and similarities between them. These commentaries take the form of a discussion between the editors, debating the contribution that each paper has made to the field and the influence it has had on management thinking.

Complexity and Organization

Hong Kong faces a new, or renewed, set of challenges linked to the up-grading of human resources, shifts in industrial structure, and emerging market demands. The contributors examine and analyse aspects of business and management in Hong Kong.

Science at the Frontier takes you on a journey through the minds of some of the nation's leading young scientists as they explore the most exciting areas of discovery today. Based on the second Frontiers of Science symposium sponsored by the National Academy of Sciences, this book describes recent accomplishments and new directions in ten basic fields, represented by outstanding scientists convening to discuss their research. It captures the excitement and personal quality of these exchanges, sometimes pointing to surprising connections spanning the boundaries of traditional disciplines, while providing a context for the reader that explains the basic scientific framework for the fields under discussion. The volume explores: New modifications to scientific theory as geologists probe deep inside the earth and astrophysicists reach to the limits of the observable universe for answers to some of nature's most fundamental and vexing questions. The influence of research in smog formation on the public debate about how to effectively control air pollution. The increasing use of computer modeling in science, from describing the evolution of cellular automata to revealing the workings of the human brain via neural networks. The rise of dynamical systems (the study of chaotic behavior in nature) to a full-fledged science. The search to understand the regulation of gene activity and the many biological problems-such as the onset of cancer-to which it applies. Recent progress in the quest to transform what we know about photosynthesis into functional, efficient systems to tap the sun's energy. Current developments in magnetic resonance imaging and its promise for new breakthroughs in medical diagnosis. Throughout this work the reader is witness to scientific discovery and debate centered on such common concerns as the dramatic and transforming effect of computers on scientists' thinking and research; the development of more cross-disciplinary perspectives; and the very nature of the scientific enterprise itself-what it is to be part of it, and its significance for society. *Science at the Frontier* is must reading for informed lay readers, scientists interested in fields other than their own, and science students considering a future specialization.

Science at the Frontier

June 2788. Amalie's the last unmarried girl in Jain's Ford settlement. Life on a frontier farming planet in the twenty-eighth century has a few complications. The imported Earth animals and plants don't always interact well with the local ecology, and there's a shortage of doctors and teachers. The biggest problem though is the fact there are always more male than female colonists arriving from other worlds. Single men outnumber single women by ten to one, and girls are expected to marry at seventeen. Amalie turned seventeen six months ago, and she's had nineteen perfectly respectable offers of marriage. Everyone is pressuring her to choose a husband, or possibly two of them. When Amalie's given an unexpected chance of a totally different future, she's tempted to take it, but then she gets her twentieth offer of marriage and it's one she can't possibly refuse. Frontier is the first novella in the Epsilon Sector Novella sequence featuring Amalie. Please note that most of the first two chapters of Frontier have appeared as the story Epsilon Sector 2788 in the EARTH 2788 short story collection. The other eighteen chapters are entirely new.

Nowadays, graph theory is an important analysis tool in mathematics and computer science. Because of the inherent simplicity of graph theory, it can be used to model many different physical and abstract systems such as transportation and communication networks, models for business administration, political science, and psychology and so on. The purpose of this book is not only to present the latest state and development tendencies of graph theory, but to bring the reader far enough along the way to enable him to embark on the research problems of his own. Taking into account the large amount of knowledge about graph theory and practice presented in the book, it has two major parts: theoretical researches and applications. The book is also intended for both graduate and postgraduate students in fields such as mathematics, computer science, system sciences, biology, engineering, cybernetics, and social sciences, and as a reference for software professionals and practitioners.

New Frontiers in Graph Theory

Macau, New Orleans, St. Louis, Pittsburgh, and San Francisco. All of these metropolitan centers were once frontier cities, urban areas irrevocably shaped by cross-cultural borderland beginnings. Spanning a wide range of periods and locations, and including stories of eighteenth-century Detroit, nineteenth-century Seattle, and twentieth-century Los Angeles, *Frontier Cities* recovers the history of these urban places and shows how, from the start, natives and newcomers alike shared streets, buildings, and interwoven lives. Not only do frontier cities embody the earliest matrix of the American urban experience; they also testify to the intersections of colonial, urban, western, and global history. The twelve essays in this collection paint compelling portraits of frontier cities and their inhabitants: the French traders who bypassed imperial regulations by throwing casks of brandy over the wall to Indian customers in eighteenth-century Montreal; Isaac Friedlander, San Francisco's "Grain King"; and Adrien de Pauger, who designed the Vieux Carré in New Orleans. Exploring the economic and political networks, imperial ambitions, and personal intimacies of frontier city development, this collection demonstrates that these cities followed no mythic line of settlement, nor did they move lockstep through a certain pace or pattern of evolution. An introduction puts the collection in historical context, and the epilogue ponders the future of frontier cities in the midst of contemporary globalization. With innovative concepts and a rich selection of maps and images, *Frontier Cities* imparts a crucial untold chapter in the construction of urban history and place.

Rakuro (aka Sunraku) and his gang are ready to tackle the Global Game Convention! They're striving to beat America's best esports team as they challenge them in a hot new fighting game-but they also need to stall for as much time as possible on the way! Megumi Natsume is going first in this team-based match, followed by Towa Amame (aka Pencilgon), a girl with a knack for dominating the games she joins. And as both teams shortly find out, giving her any sort of freedom in a game world is a very bad idea indeed...

Shangri-La Frontier 14

Sixty years after the Fractals appeared in the sky, order is being carved out of chaos and Abbottstown is the new frontier for anyone looking to start over. People are thriving in this town on the fringes between dark and light territories, especially now that Ghost Crews have cleared out the local warlords. The 444, a Ghost Crew that helped with the military campaign, stayed behind to keep the peace and help the people rebuild, and now the frontier is their home. There aren't any demons this far north and all the Abbotstown people know of Monstera is their reign of terror. For many in the frontier town, the soldiers are to be feared and steered clear of, with their hellfolk skin and animal parts. But not everyone. Ianthe Essex, the town apothecary and daughter of a Monstera, doesn't see what the older set from town sees. She sees five strong, virile men that each star in her dreams and fantasies nightly...and daily. The 444 are a blessing to the town, providing enough stores for the whole settlement to prepare for their first fear-free winter, and she is utterly smitten with them. She never thought they would feel the same. After all, they were here for a job. Until a chance meeting in the woods, a few well-placed words and a kiss that stoked a fire that set her entire being burning. One man was hers for sure...but could she have them all? Obsessed with Monsters is a GC story, but also the beginning of the Abbottstown Fractal New Frontier stories. If you like monsters, demons and a sassy, spunky heroine that knows what she wants, and gets it, this is a story for you.

Obsessed with Monsters (GC 444)

The beginning of the end... After the events in Chesterton, the manhunt for Tomas is more intense than ever before. Marshals, knights, and armies comb the frontier seeking any trace of the most wanted fugitive in the country. While Tomas flees, the church makes it's long-awaited moves. Rumors of a powerful weapon spread across the frontier faster than Tomas' wanted posters. Running out of options and time, Tomas seeks aid in a country that is increasingly hostile, not just toward him, but to all hosts. Little does he know that his quest for allies will uncover secrets whose answers he has been seeking for years. The threads of fate gather tightly around Tomas as he prepares to make his final stand against the church. But as he nears the end of his war, he begins to understand what victory might cost him. And the price might just be too terrible to pay.

The Road to Chaos

This book is a general presentation of complex systems, examined from the point of view of management. There is no standard formula to govern such systems, nor to effectively understand and respond to them. The interdisciplinary theory of self-organization is teeming with examples of living systems that can reorganize at a higher level of complexity when confronted with an external challenge of a certain magnitude. Modern businesses, considered as complex systems, ideally know how to flexibly and resiliently adapt to their environment, and also how to prepare for change via self-organization. Understanding sources of potential crisis is essential for leaders, though not all crises are necessarily bad news, as creative firms know how to respond to challenges through innovation: new products and markets, organizational learning for collective intelligence, and more.

The Mexican Frontier, 1821-1846

At the cutting edge of the sciences, at the theoretical frontier where breakthroughs in a broad spectrum of fields intersect, a dynamic new concept is emerging: complexity. In this groundbreaking new book, Peter Coveney and Roger Highfield, the scientist coauthors of the highly praised *The Arrow of Time*, explore how complexity in mathematics, physics, biology, chemistry, and even the social sciences is transforming not only the way we think about the universe, but also the very assumptions that underlie conventional science. Coveney and Highfield define complexity as a watchword for a new way of thinking about the behavior of interacting units, whether they are atoms, bits within a computer, ants in a colony, or the neurons firing in the human brain. Complexity reaches far beyond the concept of chaos and represents a profound shift away from the reductive principle that has guided science for centuries, fostering a new synthesis of concepts across many disciplines. *Frontiers of Complexity* traces the history of how such giants of science as Charles Babbage, George Boole, Richard Feynman, Kurt Godel, John von Neumann, Ilya Prigogine, and Alan Turing built on each other's work, opening the way for the leap from reductionism to complexity. As Coveney and Highfield so lucidly demonstrate, the rise of the electronic computer provided both the key and the catalyst to our exploration of complexity. A new generation of computers that runs on light, manipulates fuzzy logic, and exploits the bizarre properties of quantum mechanics, promises to deepen our understanding of complexity. The advances we have already witnessed are spectacular. The authors take us inside a laboratory where scientists are evolving the genetic molecules that enabled life to emerge on earth. Coveney and Highfield describe the work of others who are generating universes in cyberspace filled with a vast array of organisms that compete for resources, reproduce, mutate, and evolve. We witness the utterly realistic behavior of a school of virtual fish--computer-generated replicas that have been trained to swim gracefully, hunt for food, and scatter at the approach of a leopard shark. Already scientists have accurately modeled the brain of a bee, with its one million neurons. Others are beginning to reproduce the way the human brain processes vision, and even the way our genetic code can carry out "calculations" within every cell of our bodies. How much longer will it be before the computer unravels the mysteries of the one-hundred billion neurons of the human brain? Compelling in its clarity, vast in its scope, far-reaching in its implications, vibrant with the excitement of new discovery, *Frontiers of Complexity* is an arresting account of how far science has come in the past fifty years and an essential guide to the rapidly approaching future.

Creative Management of Complex Systems

Chaos Theory is a synonym for dynamical systems theory, a branch of mathematics. Dynamical systems come in three flavors: flows (continuous dynamical systems), cascades (discrete, reversible, dynamical systems), and semi-cascades (discrete, irreversible, dynamical systems). Flows and semi-cascades are the classical systems introduced by Poincaré a century ago, and are the subject of the extensively illustrated book: *"Dynamics: The Geometry of Behavior,"* Addison-Wesley 1992 authored by Ralph Abraham and Shaw. Semi-cascades, also known as iterated function systems, are a recent innovation, and have been well-studied only in one dimension (the simplest case) since about 1950. The two-dimensional case is the current frontier of research. And from the computer graphics of the leading

researcher come astonishing views of the new landscape, such as the Julia and Mandelbrot sets in the beautiful books by Heinz-Otto Peigen and his co-workers. Now, the new theory of critical curves developed by Mira and his students and Toulouse provide a unique opportunity to explain the basic concepts of the theory of chaos and bifurcations for discrete dynamical systems in two-dimensions. The materials in the book and on the accompanying disc are not solely developed only with the researcher and professional in mind, but also with consideration for the student. The book is replete with some 100 computer graphics to illustrate the material, and the CD-ROM contains full-color animations that are tied directly into the subject matter of the book, itself. In addition, much of this material has also been class-tested by the authors. The cross-platform CD also contains a software program called ENDO, which enables users to create their own 2-D imagery with X-Windows. Maple scripts are provided which give the reader the option of working directly with the code from which the graphics in the book were

Frontiers of Complexity

The purpose of this book is to examine the strategies and practices of the Han Chinese Nationalists vis-à-vis post-Qing China's ethnic minorities, as well as to explore the role they played in the formation of contemporary China's Central Asian frontier territoriality and border security. The Chinese Revolution of 1911, initiated by Sun Yat-sen, liberated the Han Chinese from the rule of the Manchus and ended the Qing dynastic order that had existed for centuries. With the collapse of the Qing dynasty, the Mongols and the Tibetans, who had been dominated by the Manchus, took advantage of the revolution and declared their independence. Under the leadership of Yuan Shikai, the new Chinese Republican government in Peking in turn proclaimed the similar "five-nationality Republic" proposed by the Revolutionaries as a model with which to sustain the deteriorating Qing territorial order. The shifting politics of the multi-ethnic state during the regime transition and the role those politics played in defining the identity of the modern Chinese state were issues that would haunt the new Chinese Republic from its inception to its downfall. Modern China's Ethnic Frontiers will be of interest to students and scholars of Chinese history, Asian history and modern history.

Chaos in Discrete Dynamical Systems

The Legacy, a magical barrier protecting humanity from Chaos, has crumbled. Four unlikely champions, each touched with Chaos magic at birth, are all that can stop the return of Daemron the Slayer. Armed with the Talismans of power the four champions, the Children of Fire, must find the Keystone, a fabled place where, or so it is said, the Legacy can be restored. But even the noblest heart can be twisted by the tainted magic of Chaos...

Modern China's Ethnic Frontiers

For almost ten years chaos and fractals have been enveloping many areas of mathematics and the natural sciences in their power, creativity and expanse. Reaching far beyond the traditional bounds of mathematics and science to the realms of popular culture, they have captured the attention and enthusiasm of a worldwide audience. The fourteen chapters of the book cover the central ideas and concepts, as well as many related topics including, the Mandelbrot Set, Julia Sets, Cellular Automata, L-Systems, Percolation and Strange Attractors, and each closes with the computer code for a central experiment. In the two appendices, Yuval Fisher discusses the details and ideas of fractal image compression, while Carl J.G. Evertsz and Benoit Mandelbrot introduce the foundations and implications of multifractals.

This collection of essays is a compilation of the latest research in first-year composition, including pedagogy, praxis, debate, and assessment. Originally begun as a collection of panel presentations from the Rocky Mountain Modern Language Association annual conference, it has since evolved to include innovative pedagogy regardless of presentation status. The book is divided into presentation "panels," in order to present the reader with innovative pedagogy and thought-provoking conversations concerning the first-year classroom, assessment, and pedagogy. It will benefit anyone who studies or engages with first-year composition, including graduate students, instructors, and administration.

Christian-Muslim Frontier

The first American frontier lay just beyond the Appalachian Mountains and along the Gulf Coast. Here, successive groups of pioneers built new societies and developed new institutions to cope with life in the wilderness. In this thorough revision of his classic account, Malcolm J. Rohrbough tells the dramatic story of these men and women from the first Kentucky settlements to the closing of the frontier. Rohrbough divides his narrative into major time periods designed to establish categories of description and analysis, presenting case studies that focus on the county, the town, the community, and the family, as well as politics and urbanization. He also addresses Spanish, French, and Native American traditions and the anomalous presence of African slaves in the making of this story.
