Setting Up and Running a Therapy Business

This book answers the questions that therapists frequently ask about setting up and running a business. It allows readers to successfully make the journey from being trained in how to conduct professional therapy sessions to running a growing private practice. The material covers a range of issues including: registration with HMRC, money issues, marketing, insurance, and whether to work from home or other premises. The book addresses a number of practical questions, such as: Do I have to register with the information commission? What can I count as legitimate business expenses? What mistakes should I avoid when marketing my practice? How can I easily and cheaply accept card payments from my clients? What help can I get to manage my phone calls? How can I get a website? and, What can I do to increase my personal safety? As counselling in the twenty-first century changes, an increasing number of therapists are using technology to write and store notes, and to communicate with clients - either to arrange appointments, or to conduct them.

Disability-affirmative Therapy

Clinicians outside of rehabilitation psychology do not receive training on how to work with clients with disabilities. Nonetheless, given that people with disabilities comprise over 15% of the population, virtually all clinicians will have clients with disabilities in their practice. Without education or training in disability, clinicians are prone to make errors in estimating the role of disability in the presenting problems and the case formulation. Disability-Affirmative Therapy (D-AT) helps clinicians put the disability of a client into proper focus, without making one of the usual mistakes associated with cross-cultural therapy: overinflating the role of the disability, or underestimating its profound effects. D-AT provides a template for evaluation - nine areas to be discussed with the client - that allows understanding of the client's lifetime experiences with disability. The template is not a theory of therapy, but an overlay onto the therapist's own approach, thus having broad appeal and utility. D-AT is a positive and affirming approach to therapy with clients with disabilities, regardless of the theory of therapy used. The book contains many vignettes to illustrate key points and an extended case example to which the D-AT template is applied. Grounded in social and clinical psychology research, this book will be an important and unique guide to all clinicians working with clients with disabilities and their families.

Music's ability to influence emotions and moods is universally acknowledged, and music therapists have long known that stimulating the brain through the auditory system is a key to obtaining remarkable responses. Music therapy is a particularly effective tool when working with children with autism spectrum conditions, because music communicates with these children on a level where mere words cannot go. Written in a way that is both informative for the professional and accessible for parents, this book furthers the already strong case for the use of music therapy as a resource to encourage behavioural changes for the better in children with autism spectrum conditions. Placing particular emphasis upon sensory integration, the author discusses contributing factors to the behaviour of people on the autism spectrum, and, through the use of case studies, presents the latest approaches in music therapy that are enabling children with autism spectrum conditions to better cope with sensory integration.
