Surfing the net? Your data is likely traveling underwater - Surfing the net? Your data is likely traveling underwater by World Economic Forum 1,149 views 7 years ago 1 minute, 16 seconds - <http://www.weforum.org/>

99% of internet traffic travels via undersea cables

There are 299 active data cables spanning the world's oceans

There are 15 major cables under the Atlantic Ocean

Egypt Around 10 cables run through the Suez Canal

14 cables leave the west coast of the United States to link Pacific nations

This is what the network looks like displayed as a metro system map

The cables are laid and maintained by a fleet of 44 ships

Most damage to cables is caused by fishing nets and ship's anchors

Cables can also be damaged by earthquakes and undersea volcanoes

Undersea cables provide lightning-fast data transfer

The round trip delay between the USA and China takes just 120 milliseconds
