Yakima Canyon

Vesuvius Italy

The Cascade Volcanoes

Long Valley Caldera

Mammoth Mountain

Toba

The Vantage Sediment

This Is the Star of the Show There's a Big Reverse Fault Proving that Earthquakes Are a Big Part of

Our History That's a Story for another Day Barre Off to the South Off to the Right of this Huge Cut That Was Built Back in the Early 70s Late 60s There's Our Baked Idaho Tuff from Southern Idaho underneath the Pomona Lava Flow and You Can Even see some of the Pure Idaho Tuff That We Can See Over in Mattawa Much More Clearly Jack Powell's a Local Geologist and He Got these Photos from Me Just in the Last Few Days I'm Very Appreciative of Him and You Get into that Orange Brown Baked Zone It Looks like Glass It Is Glass It's an Almost an Obsidian Type of a Look And Their Skeletons Have Been Perfectly Preserved Now for Twelve Million Years and that's the Whole the Whole Point of Ash Fall Park Is To Give the Public a First-Hand View of a Real Paleontology Site Which Is Still Actively Being Excavated It's Just Is that Pretty Much this a Straight Ashfall Type Deposit It Almost Reminds Me of Talcum Powder It's So Fine It's Down Oh Just a Few Microns Mm-Hmm You Know a Lot of a Lot of Volcanic Ash Is Quite Gritty When You We Need To Feel It but this Stuff Is So Far from the Crater That Only the Finest Particles Made It this Far and if You Trace this Ash Farther West

So with this New Discovery in this New Set of Scientific Papers in the Last 15 Years We Can Change these Kinds of Maps so I Did this at My Desk with My Colored Pencils so Black Line Is Our Caldera the Bruno Jar Bridge Caldera What's the Red That's Our Hundred Miles of Welded Tuff Our Lethal Zone No if Nobody Survives in that First Hundred Miles from the Rim of the Caldera and Then Ash Fall on Average a Foot of It in the Brown and Down to an Inch Later on Now We Were Just in Eastern Nebraska They Had More than an Inch so There's these Local Reworkings of the Ash Again Which Are a Complication

Because There's a Stationary Hotspot in the Middle of the Pacific Ocean There's a Moving Ocean Floor and We Get a Line of Volcanoes One at a Time Only One Is Active at a Time and those Volcanoes Get Older and Older as You Go Away from the Hotspot in the Direction that the Tectonic Plate Is Moving Sound Familiar of Course It Does that's the Same Situation with the Yellowstone Hotspot Heats or Anything Thick Continental Crust Instead of an Ocean Crust Making a Totally Different Kind of Volcano a Supervolcano

The Formation of Smith Rock and Its Origin Has Been a Debate for some Time More Recent Work Suggests that It Has More Relationship to Yellowstone Type Eruptions and Maybe some of the Earliest Eruptions Related to the Modern Tract of Yellowstone in the Snake River Plain Oregon Geologist Jason Mclaury and Kerry Gordon Have Helped Find Newly Discovered Calderas All across Oregon with Their Dates and Locations the Calderas Showed that the Yellowstone Hotspot Has a Much Longer History in the Pacific Northwest than Was Recognized before Smith Rock a Popular State Park within an Hour of Bend Oregon
