Thailand: Deadly Destination

The daily robbing, bashing, drugging, extortion and murder of foreign tourists on Thai soil, along with numerous scandals involving unsafe facilities and well established scams, has led to frequent predictions that Thailand's multi-billion dollar tourist industry will self-destruct. Instead tourist numbers more than doubled in the decade to 2014. The world might not have come to the hometowns of the many visitors fascinated by Thailand, but it certainly came to the Land of Smiles. While the Thai media is heavily censored, and bad news stories about tourists suppressed, nonetheless there is more than enough evidence to demonstrate that something has gone seriously awry with the nation's tourist industry. In 2014, just as in the years preceding it, there were train, bus, ferry, speedboat, motorbike and car accidents, murders, knifings, unexplained deaths, numerous suicides, diving accidents, robberies gone wrong, anonymous bodies washing up on the shores and a string of alcohol and drug related incidents. Thailand had a dying king and serious succession problems, weak democratic institutions, an economy slipping into recession, faced issues of corruption across many of its key services and was host to international crime syndicates, awash with despised foreigners and drifting perilously towards civil war. Tourists choose one destination over another for a number of reasons, most of which Thailand scores highly on. But on the core issue of tourist safety, Thailand scores very badly indeed.

Far Out

Far Out charts the history of Western countercultural longing for Nepal that made the country, and Kathmandu in particular, a premier tourist destination in the twentieth century. Anthropologist and historian Mark Liechty describes three distinct phases: the immediate post-war era when the country provided a Raj-like throwback experience for rich foreigners (mainly Americans), Nepal's emergence as the most exotic outpost of hippie counterculture in the 1960s and early '70s, and, finally, the Nepali state's rebranding of itself as an adventure destination from the 1970s on. Liechty is attuned to how the dynamics of mid-twentieth century globalization--the Cold War and shifting international relations, modernization and development ideologies, the rise of consumerist middle classes, increased mobility and the birth of mass tourism, and emerging global youth countercultures--drew Nepal into the web of geopolitical, economic, and sociocultural transformations that shaped the modern world. But Liechty doesn't want to tell the story of tourism as something that "just happened" to Nepalis. He shows how Western projections of Nepal as an isolated place inspired creative Nepali enterprises and paradoxically gave locals the opportunity to participate in the highly coveted global economy. The result is a readable cultural history of a place that has been in many ways defined by a (sometimes bizarre) cultural encounter. The author's lifelong interest in Nepal and his almost twenty-five years of research make his account both sophisticated and empathic--but not without a touch of humor.

Inside El Barrio

* Revealing portrait of daily life in Cuba that explores how the socialist system has operated on the ground over the last two decades * Shows how social networks and neighborhoods were critical in sustaining Fidel's regime while other socialist countries were collapsing in the late 80s The abrupt collapse of the Soviet Union and the East European Communist Bloc in 1989 plunged Cuba into a catastrophic economic crisis that spawned unprecedented hardship, magnified social tensions, and emigration in the thousands. In July 1990, a somber Fidel Castro called upon the masses to prepare for a sustained period of hard times. Inside El Barrio charts the legacy of Fidel Castro through the unique lens of Cuban household life during El Período Especial (the Special Period). Taylor traverses the neighborhoods and residential developments of Havana between 1989 and 2006, the final and most complex period in the "Age of Castro's Cuba" to uncover the hidden vibrancy of Cuba's streets and citizens. In doing so, he acquires a deeper understanding of Cuban society by exploring what it

means to live in a people-centered nation and the importance of neighborhoods in shaping everyday life and culture.

Travel, Discovery, Transformation

This latest volume in the Culture & Civilization series gathers interdisciplinary voices to present a collection of essays on travel and travel narratives. The essays span a range of topics from iconic ancient travel stories to modern tourism. They discuss travel in the ancient world, modern heroic travels, the literary culture of missionary travel, the intersection of fiction and travel narratives, modern literary traditions and visions of Greece, personal identity, and expatriation. Essays also address travel memoirs, the re-imagining of worlds through travel, transformed landscapes and animals in travel narratives, diplomacy, English women travel writers, and pilgrimage and health in the medieval world. The history of travel writing takes in multiple pursuits: exploration and conquest, religious pilgrimage and missionary work, educational tourism and diplomacy, scientific and personal discovery, and natural history and oral history. As a literary genre, it has enhanced a wide range of disciplines, including geography, ethnography, anthropology, and linguistics. Moreover, twenty-first-century interests in travel and travel writing have produced a global framework that promises to expand travel's theoretical reach into the depths of the Internet, thus challenging our conventional concept of what it means to travel. The fact that travel and travel writing have a prehistory that is embedded in foundational religious texts and ancient narratives of journey, like the Odyssey and the Epic of Gilgamesh, makes both travel and travel writing fundamental and essential expressions of humanity. Travel encourages writing, particularly as epistolary and poetic chronicling. This is clearly a history and tradition that began with human communication and which has kept pace with our collective development.

Elite

Written by Drew Wagar under official license from the creators of, and based in the vast universe of, the seminal space trading computer game Elite: Dangerous. Lady Kahina Loren, born into the Prism system's powerful ruling family, is desperate to throw off the shackles of her privileged lifestyle and discover herself, but ambition crumbles when she faces death at the hands of the one person she thought she could trust. With the advanced technology of the 3rd millennium, death is not always as final as it seems, but when that technology malfunctions, is death the better option...

Adventure Tourism

Looking at the past, present and future of adventure tourism, Adventure Tourism: the new frontier examines the product, the adventure tourist profile, and issues such as supply, geography and sustainability. International case studies are used to illustrate these issues, including: Gorilla watching holidays, Trekking on Mount Everest, Diving holidays, and Outward Bound packages. Analysis of the development and nature of adventure tourism accompanies these studies, ensuring that the title is useful both for undergraduate and postgraduate students of tourism and for professionals involved in managing adventure tourism enterprises. There is also a companion website with additional cases, which can be found at www.bh.com/companions/0750651865.

Parents' Magazine & Family Home Guide

This book examines the evolution of the phenomenon and explores the genesis of overtourism and the system dynamics underlining it. The 'overtourism' phenomenon is defined as the excessive growth of visitors leading to overcrowding and the consequential suffering of residents, due to temporary and often seasonal tourism peaks, that lead to permanent changes in lifestyles, amenities and well-being. Enormous tensions in overtourism affected destinations have driven the intensification of policy making and scholarly attention toward seeking antidotes to an issue that is considered paradoxical and problematic. Moving beyond the 'top 10 things you can do about overtourism', this book examines the evolution of the phenomenon and explores the genesis of overtourism as well as the system dynamics underpinning it. With a rigorous scientific approach, the book uses systems-thinking and contemporary paradigms around sustainable development, resilience planning and degrowth; while considering global economic, socio-political, environmental discourses. Researchers, analysts, policy makers and industry stakeholders working within tourism as well as those within the private sector, community groups, civil society groups and NGOs will find this book an essential source of information.

Overtourism

Winner of an Award of Excellence, American Association for State and Local History (AASLH) In 1822, settlers pushed north from Massachusetts and other parts of New England into Monson, Maine. On land taken from the Penobscot people, they established prosperous farms and businesses. Focusing on the microhistory of this village, Andrew Witmer reveals the sometimes surprising ways that this small New England town engaged with the wider world across the nineteenth and twentieth centuries. Townspeople fought and died in distant wars, transformed the economy and landscape with quarries and mills, and used railroads, highways, print, and new technologies to forge connections with the rest of the nation. Here and Everywhere Else starts with Monson's incorporation in the early nineteenth century, when central Maine was considered the northern frontier and over 90 percent of Americans still lived in rural areas; it ends with present-day attempts to revive this declining Maine town into an artists' colony. Engagingly written, with colorful portraits of local characters and landmarks, this study illustrates how the residents of this remote place have remade their town by integrating (and resisting) external influences.

Here and Everywhere Else

Ms. Adventure tells the story of Jess Phoenix's extraordinary career in geology—and how the barriers she faced along the way inspired her to advocate for more diversity in science.

Ms. Adventure

Experience a kaleidoscope of real-life underwater missions, ranging from ancient ruins covered by reservoirs in the desert Southwest to a World War II submarine off the Alaskan coast; from the Isle Royale shipwrecks in the frigid Lake Superior to the USS Arizona in Pearl Harbor; from the HL Hunley, the first submarine in history to sink an enemy ship, in Charleston Harbor to the ships sunk by atomic bombs at Bikini Atoll, and much more.

Submerged

Sociocultural Studies in Education: Critical Thinking for Democracy fills a void in the education of educators and citizens in a democracy. It explores some of the fundamentals around which disagreements in education arise. It presents a process with which those new to these debates can understand often confusing and entwined sets of facts and logics. This book leads the reader through some general concepts and intellectual skills that provide the basis for making sense out of the debates around public education in a democracy. This book can be seen as a primer on how to read texts about education. It acknowledges that good teachers must be not only trained to teach, but also educated about education. It presents the various themes and currents found within the arguments and narratives that people use to represent public education. It assumes that the more those interested in education know about how to see through the rhetoric, the better they will be at discerning whose interests are served by which texts.

Video Movie Guide 1998

Founders of the phenomenally successful publishing company Lonely Planet, Tony and Maureen Wheeler have produced travel guides to just about every corner of the globe. Lonely Planet Publications was born in 1973 when the Wheelers self-published a quirky travel guide, Across Asia on the Cheap. This was quickly followed by what soon became the backpackers' bible, South-East Asia on a Shoestring. Going boldly where no other travel publisher had ventured, they catered to a new generation of independent, budget-conscious travelers long before the advent of mass tourism. Unlikely Destinations: The Lonely Planet Story is a unique mix of autobiography, business history and travel

book. It traces Tony and Maureen Wheeler's personal story as well as the often bumpy evolution of their travel guide business into the world's largest independent travel publishing company. Not surprisingly, after thirty years in the business the Wheelers have an unrivalled set of anecdotes which they share in *Unlikely Destinations: The Lonely Planet Story*. They have been hassled by customs, cheated by accountants, let down by writers, banned in Malawi, berated for their Burma guide and had books pirated in Vietnam. Tony has been gored by a cow in Benares, declared dead around the world in an assortment of gruesome and greatly exaggerated accounts and their company has been accused of the "Lonely Planetization" of the world. Through it all, from the heady days of discovery in the '70s to the rocky patch after the September 11th terrorist attacks, the Wheelers' passion for the planet and traveling certainly hasn't diminished, and comes shining through in this enthralling travelogue. But above all, their memoir reveals the spirit of adventure that has made them, according to the New York Daily News, "the specialists in guiding weird folks to weird places."

DVD & Video Guide 2005

Creating tourism Space

A new paperback edition of Steve Chilton's illuminating and entertaining history of hill running, one of athletics' most demanding sports, as well as the most demandingly amateur.

Unlikely Destinations: The Lonely Planet Story

For many people, holidays are an increasingly central feature of contemporary western society. The tourism industry has expanded rapidly since 1950, but this book poses the significant question of consequent environmental impacts: are environments being benefited or damaged, by the tourist who visit them? A well-balanced introductory text, this topical book on the relationships between tourism, society and the environment, examines 'tourism' and 'environment' in detail, and gives a historical overview of the growth of the tourism industry. It discusses how the tourism industry markets physical and cultural environments to be consumed by the tourist, and the consequences of the tourism they then attract. It explores: * how the economics of tourism can be adopted in a positive way to aid conservation * whether the concept of sustainability can be applied to tourism * provides a critique of the 'new' forms of tourism, that have developed in recent years. An extensive range of international case studies from both the developed and developing world are used to illustrate the theoretical ideas presented, and to aid the student, it includes end of chapter summaries, further reading guides and boxed vignettes focusing on contemporary environmental issues and debates.

Video Movie Guide 1997

Journalist Krakauer, standing on the summit of Mt. Everest, saw nothing that "suggested that a murderous storm was bearing down." He was wrong. The storm, which claimed five lives and left countless more in guilt-ridden disarray, would also provide the impetus for this epic account of the May 1996 disaster. Unabridged. 7 CDs.

It's a Hill, Get Over It

This book offers a critical account of the historical evolution of tourism through the identification and discussion of key turning points. Based on these considerations, future turning points are identified and evaluated. The volume provides a continuum between the past and future of tourism. Its central themes are the globalisation of tourism; the development of destinations; the importance of mobility and transport; the development of the modern hotel; the diversification of niche tourism and the conceptualisation of the past and future of tourism using the evolutionary paradigm in future studies. The core findings of the book provide the first perspective on how the history of tourism will shape its future.

Environment and Tourism

"Now, if you're a good boy and you behave like we've taught you, this will all be over soon." The doctor dragged the boy to a chair and forced him to sit. The boy kept his eyes fixed on the far wall, ignoring the feeling of the needle sinking into his arm. He winced, gritted his teeth and compelled himself to remain

silent, even as a pain like acid spread through his arm and into his torso, tightening his chest to an unbearable level. He couldn't hold it in any more. He threw his head back and screamed out.' Seph's mother died giving birth to him, leaving him to grow up in a military compound. Dr. Sericus claims that he has a medical condition that requires constant monitoring and tests. However, Seph manages to lead a fairly normal life and makes friends with some of the soldiers in the base. As Seph grows up, he begins to question the nature of Dr. Sericus's tests. He chooses to drop out of the medical trials, but Dr. Sericus won't let him go so easily. He threatens to destroy everything Seph has ever cared about, starting with the lives of his teammates.

Tourism in Scientific Research

The Darker Side of Travel is a contemporary and comprehensive analysis of dark tourism. Drawing on existing literature, numerous examples and introducing new conceptual perspectives, it develops a theoretically informed foundation for examining the demand for and supply of dark tourism experiences. It also explores issues relevant to the development, management and interpretation of visitor sites and attractions associated with death, disaster and suffering.

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

The Future Past of Tourism

Tourism plays an important role in social development and has attracted the interest of the social sciences, including anthropology where it has become an accepted part of anthropological studies. This book is designed to give an overview and critical assessment of this developing field of study. Basic research from three theoretical perspectives is reviewed and assessed: tourism as a form of development or acculturation, as a personal transition, and as a kind of social superstructure. In later chapters the applied side of the field is examined, including considerations of tourism policy and sustainable tourism development. Most chapters include summary case studies illustrating some of the important points under examination. The book concludes with a discussion of the integration of basic and applied approaches in the anthropological agenda on tourism and suggestions concerning the future course of study in the field.

"Its publication should be a major event for cognitive linguistics and should pose a major challenge for cognitive science. In addition, it should have repercussions in a variety of disciplines, ranging from anthropology and psychology to epistemology and the philosophy of science. . . . Lakoff asks: What do categories of language and thought reveal about the human mind? Offering both general theory and minute details, Lakoff shows that categories reveal a great deal."—David E. Leary, American Scientist

The Alien World

Throughout the twentieth century, governments sought to achieve 'development' not only in their own countries, but also in other regions of the world; particularly in Africa, Asia, Latin America and the Caribbean. This focus on 'development' as a goal has continued into the twenty-first century, for example through the United Nations Millennium Development Targets. While development is often viewed as something very positive, it is also very important to consider the possible detrimental effects it may have on the natural environment, different social groups and on the cohesion and stability of societies. In this important book, Katie Willis investigates and places in a historical context, the development theories behind contemporary debates such as globalization and transnationalism. The main definitions of 'development' and 'development theory' are outlined with a description and explanation of how approaches have changed over time. The differing explanations of inequalities in development, both spatially and socially, and the reasoning behind different development policies are also considered. By drawing on pre-twentieth century European development theories and examining current policies in Europe and the USA, the book not only stresses commonalities in development theorizing over time and space, but also the importance of context in theory construction. This topical book provides an ideal introduction to development theories for students in geography, development studies, area studies, anthropology and sociology. It contains student-friendly features, including boxed case studies with examples, definitions, summary sections, suggestions for further reading, discussion questions and website information.

Sacred Natural Sites are the world's oldest protected places. This book focuses on a wide spread of both iconic and lesser known examples such as sacred groves of the Western Ghats (India), Sagarmatha /Chomolongma (Mt Everest, Nepal, Tibet - and China), the Golden Mountains of Altai (Russia), Holy Island of Lindisfarne (UK) and the sacred lakes of the Niger Delta (Nigeria). The book illustrates that sacred natural sites, although often under threat, exist within and outside formally recognised protected areas, heritage sites. Sacred natural sites may well be some of the last strongholds for building resilient networks of connected landscapes. They also form important nodes for maintaining a dynamic socio-cultural fabric in the face of global change. The diverse authors bridge the gap between approaches to the conservation of cultural and biological diversity by taking into account cultural and spiritual values together with the socio-economic interests of the custodian communities and other relevant stakeholders.

Theories and Practices of Development

Providing an overview of Internet politics, this work examines the impact of communication technologies on political parties and elections, pressure groups, social movements, public bureaucracies, and global governance.

Sacred Natural Sites

Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Internet Politics

This book acts as a compilation of papers presented in the Human Engineering Symposium (HUMENS 2021). The symposium theme, "Human-centered Technology for A Better Tomorrow," covers the following research topics: ergonomics, biomechanics, sports technology, medical device and instrumentation, artificial intelligence / machine learning, industrial design, rehabilitation, additive manufacturing, modelling and bio-simulation, and signal processing. Fifty-nine articles published in this book are divided into four parts, namely Part 1—Artificial Intelligence and Biosimulation, Part 2—Biomechanics, Safety and Sports, Part 3—Design and Instrumentation, and Part 4—Ergonomics.

The Rise of Populist Sovereignism

Nowhere in the world is the demand for peace more prominent and challenging than in Africa. From state collapse and anarchy in Somalia to protracted wars and rampant corruption in the Congo; from bloody civil wars and extreme poverty in Sierra Leone to humanitarian crisis and authoritarianism in Sudan, the continent is the focus of growing political and media attention. This book presents the first comprehensive overview of conflict and peace across the continent. Bringing together a range of leading academics from Africa and beyond, *Peace and Conflict in Africa* is an ideal introduction to key themes of conflict resolution, peacebuilding, security and development. The book's stress on the importance of indigenous Africa approaches to creating peace makes it an innovative and exciting intervention in the field.

World Migration Report 2020

This very interesting compilation, written by the son of the first photographer and journalist of Ceylon, is of the various important dates in the history starting with the advent of the Portuguese in 1505. It goes on to cover the Dutch period in a short chapter to reach the copious section of the British period that commenced in 1795 and continues till the author's time of compiling in the 1920s. Although the eras of the Portuguese and Dutch are over in a few pages. The record of the events of the British stretch over 125 pages. Another wonderful part of this book is 442 short notes on the places, people, history, scandals, poetry, celebrations, arrival of ships that make the book interesting to those who know Jaffna only by name.

Providing the Means of War

The Global Journalist in the 21st Century systematically assesses the demographics, education, socialization, professional attitudes and working conditions of journalists in various countries around the world. This book updates the original Global Journalist (1998) volume with new data, adding more than a dozen countries, and provides material on comparative research about journalists that will be useful to those interested in doing their own studies. The editors put together this collection working under the assumption that journalists' backgrounds, working conditions and ideas are related to what is reported (and how it is covered) in the various news media round the world, in spite of societal and organizational constraints, and that this news coverage matters in terms of world public opinion and policies. Outstanding features include: Coverage of 33 nations located around the globe, based on recent surveys conducted among representative samples of local journalists Comprehensive analyses by well-known media scholars from each country A section on comparative studies of journalists An appendix with a collection of survey questions used in various nations to question journalists As the most comprehensive and reliable source on journalists around the world, The Global Journalist will serve as the primary source for evaluating the state of journalism. As such, it promises to become a standard reference among journalism, media, and communication students and researchers around the world.

Human-Centered Technology for a Better Tomorrow

Since the beginning of time, the angelic hosts of the High Heavens and the demonic hordes of the Burning Hells have been locked in a struggle for the fate of all Creation. That struggle has now come to the mortal realm...and neither Man nor Demon nor Angel will be left unscathed.... DIABLO Driven by nightmares to the ruins of a mysterious tomb, Lord Aldric Jitan hopes to awaken a terrible evil that has slept since the fall of Tristram. Drawn by the growing darkness in the land, the enigmatic Necromancer, Zayl, stumbles upon Jitan's plot -- unaware that one of his own brethren has set these dire events in motion. Now, as the celestial Moon of the Spider rises, the nefarious demon, Astrogha, prepares to unleash his minions upon Sanctuary. MOON OF THE SPIDER An original tale of swords, sorcery, and timeless struggle based on the bestselling, award-winning M-rated computer game from Blizzard Entertainment. Intended for mature readers.

Peace and Conflict in Africa

People's minds are hard to change. In North America and elsewhere, communities are fractured along ideological lines as social media and algorithms encourage individuals to seek out others who think like they do and to condemn those that don't. This social and political polarization has resulted in systemic discrimination and weaponized communication trends such as gaslighting and fake news. In this compelling new book, Kyle Conway confronts the communication challenges of our modern world by navigating the space between opposing perspectives. Conway explores how individuals can come to understand another person's interpretation of the world and provides the tools for shaping effective arguments capable of altering their perspective. Drawing on the theory of cultural translation and its dimensions of power, meaning, and invention, Conway deepens our understanding of what it means to communicate and opens the door to new approaches to politics and ethics. An essential guide for surviving in our polarized society, this book offers concrete strategies for refining how values and ideas are communicated.

Martyn's Notes on Jaffna

Since the launch of Bitcoin in 2009 several hundred different 'cryptocurrencies' have been developed and become accepted for a wide variety of transactions in leading online commercial marketplaces and the 'sharing economy', as well as by more traditional retailers, manufacturers, and even by charities and political parties. Bitcoin and its competitors have also garnered attention for their wildly fluctuating values as well as implication in international money laundering, Ponzi schemes and online trade in illicit goods and services across borders. These and other controversies surrounding cryptocurrencies have induced varying governance responses by central banks, government ministries, international organizations, and industry regulators worldwide. Besides formal attempts to ban Bitcoin, there have been multifaceted efforts to incorporate elements of blockchains, the peer-to-peer technology underlying cryptocurrencies, in the wider exchange, recording, and broadcasting of digital transactions. Blockchains are being mobilized to support and extend an array of governance activities. The novelty and breadth of growing blockchain-based activities have fuelled both utopian promises and dystopian fears regarding applications of the emergent technology to Bitcoin and beyond. This volume brings

scholars of anthropology, economics, Science and Technology Studies, and sociology together with GPE scholars in assessing the actual implications posed by Bitcoin and blockchains for contemporary global governance. Its interdisciplinary contributions provide academics, policymakers, industry practitioners and the general public with more nuanced understandings of technological change in the changing character of governance within and across the borders of nation-states.

Readings in Systems Engineering

Written by Drew Wagar under official license from the creators of, and based in the vast universe of, the seminal space trading computer game *Elite: Dangerous*. Lady Kahina Loren, born into the Prism system's powerful ruling family, is desperate to throw off the shackles of her privileged lifestyle and discover herself, but ambition crumbles when she faces death at the hands of the one person she thought she could trust. With the advanced technology of the 3rd millennium, death is not always as final as it seems, but when that technology malfunctions, is death the better option...

The Global Journalist in the 21st Century

A comprehensive account of economic size distributions around the world and throughout the years. In the course of the past 100 years, economists and applied statisticians have developed a remarkably diverse variety of income distribution models, yet no single resource convincingly accounts for all of these models, analyzing their strengths and weaknesses, similarities and differences. *Statistical Size Distributions in Economics and Actuarial Sciences* is the first collection to systematically investigate a wide variety of parametric models that deal with income, wealth, and related notions. Christian Kleiber and Samuel Kotz survey, compliment, compare, and unify all of the disparate models of income distribution, highlighting at times a lack of coordination between them that can result in unnecessary duplication. Considering models from eight languages and all continents, the authors discuss the social and economic implications of each as well as distributions of size of loss in actuarial applications. Specific models covered include: Pareto distributions Lognormal distributions Gamma-type size distributions Beta-type size distributions Miscellaneous size distributions. Three appendices provide brief biographies of some of the leading players along with the basic properties of each of the distributions. Actuaries, economists, market researchers, social scientists, and physicists interested in econophysics will find *Statistical Size Distributions in Economics and Actuarial Sciences* to be a truly one-of-a-kind addition to the professional literature.

Diablo: Moon of the Spider

Early in human history, certain individuals were born who live on, unaging, undying, through the centuries and millennia. We follow them through over 2000 years, up to our time and beyond - to the promise of utopia and the challenge of the stars. A milestone in modern science fiction and a New York Times Notable Book on its first publication in 1989, this is one of a great writer's finest works.

The Normal News

In the past eight years, there has been a massive increase in government spending on counterterrorism intervention development and implementation. Given this increase, there are two evidence-based policy questions that are important to address: Is there evidence that any of these programs are effective – in other words, can they be shown to be linked to reducing terrorism, terrorist recruiting, or to improving the response and management of terrorist events? Do these interventions have secondary or collateral effects that may be costly, harmful, illegal, beneficial, or otherwise? As Lum and Kennedy discovered in an evaluation research on counterterrorism interventions, only a minuscule number of empirical studies of terrorism exist and there is an almost complete absence of evaluation research on counter-terrorism strategies. This is startling given the enormous increases in the development and use of counter-terrorism programs, as well as spending on counter-terrorism activity. Even more disconcerting was the nature of the evaluations we did find; some programs were shown to either have no discernible effect on terrorism or lead to increases in terrorism. The emphasis of the need for empirical research in evaluating interventions and informing policy cannot be overstated, and is the primary goal of Evidence-Based Counterterrorism Policy.

The Art of Communication in a Polarized World

This 1929 volume offers firsthand accounts of Haitian voodoo and witchcraft rituals. Author William Seabrook introduced the concept of the walking dead to the West with this illustrated travelogue.

Bitcoin and Beyond

This book analyses the language that ordinary people employ when discussing money, debt and financial behaviour. It documents and critiques this language from an array of disciplinary perspectives, with chapters on children's books, government infomercials, television poverty porn, the emotional experience of being indebted, and more. In doing so, it addresses common underlying questions concerning definitions of money and value, and scrutinises how people construct, negotiate and articulate meaning in these domains. This wide-ranging edited collection will be of interest to students and scholars of linguistics, sociology, communication, literature and anthropology.

Elite

In this hard-hitting indictment of the pharmaceutical industry, Ray Moynihan and Allan Cassels show how drug companies are systematically using their dominating influence in the world of medical science, drug companies are working to widen the very boundaries that define illness. Mild problems are redefined as serious illness, and common complaints are labeled as medical conditions requiring drug treatments. Runny noses are now allergic rhinitis, PMS has become a psychiatric disorder, and hyperactive children have ADD. *Selling Sickness* reveals how expanding the boundaries of illness and lowering the threshold for treatments is creating millions of new patients and billions in new profits, in turn threatening to bankrupt national healthcare systems all over the world. This Canadian edition includes an introduction placing the issue in a Canadian context and describing why Canadians should be concerned about the problem.

Statistical Size Distributions in Economics and Actuarial Sciences

"Now, if you're a good boy and you behave like we've taught you, this will all be over soon." The doctor dragged the boy to a chair and forced him to sit. The boy kept his eyes fixed on the far wall, ignoring the feeling of the needle sinking into his arm. He winced, gritted his teeth and compelled himself to remain silent, even as a pain like acid spread through his arm and into his torso, tightening his chest to an unbearable level. He couldn't hold it in any more. He threw his head back and screamed out.' Seph's mother died giving birth to him, leaving him to grow up in a military compound. Dr. Sericus claims that he has a medical condition that requires constant monitoring and tests. However, Seph manages to lead a fairly normal life and makes friends with some of the soldiers in the base. As Seph grows up, he begins to question the nature of Dr. Sericus's tests. He chooses to drop out of the medical trials, but Dr. Sericus won't let him go so easily. He threatens to destroy everything Seph has ever cared about, starting with the lives of his teammates.

Evidence-Based Counterterrorism Policy

'Post-truth' was Oxford Dictionaries 2016 word of the year. While the term was coined by its disparagers in the light of the Brexit and US presidential campaigns, the roots of post-truth lie deep in the history of Western social and political theory. Post-Truth reaches back to Plato, ranging across theology and philosophy, to focus on the Machiavellian tradition in classical sociology, as exemplified by Vilfredo Pareto, who offered the original modern account of post-truth in terms of the 'circulation of elites'. The defining feature of 'post-truth' is a strong distinction between appearance and reality which is never quite resolved and so the strongest appearance ends up passing for reality. The only question is whether more is gained by rapid changes in appearance or by stabilizing one such appearance. Post-Truth plays out what this means for both politics and science.

The Story of Evolution by Joseph McCabe is a summary of evolutionary theory from the perspective of a 1900s English writer. McCabe writes about the Big Bang, modern man, and the subsequent evolution of plants, animals, and humans. Evolution is the change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction.

This work deals not only with the well-organized right extremism in modern Europe as well as with its function in proper political parties, but equally includes two additional, broader approaches: the militant branches and subcultures that exist, including some paramilitary phenomena in Eastern Europe; and the broad realm of their political ideas and cultural trends and the influence they exert on European political culture. German description: Hier werden in mehrfacher Hinsicht neue Akzente gesetzt: Erstens sind alle Beiträge vergleichend angelegt und überschreiten den nationalen Rahmen. Zweitens ist das östliche Europa in etwa gleichgewichtig vertreten, obwohl die Forschungslage weit ungünstiger ist als für das westliche. Drittens behandelt der Band nicht nur den parteiformig organisierten Rechtsextremismus und das damit verbundene Wahlgesehehen, sondern bezieht zum einen militante Szenen und Subkulturen einschließlich mancher paramilitärischer Erscheinungen im östlichen Europa, zum anderen das weite Feld politischer Ideen und kultureller Trends und ihren Einfluss auf die europäische politische Kultur mit ein auch hier wiederum in vergleichender und Ländergrenzen überschreitender Anlage.

Ask Dr. Mueller captures the glamour and grittiness of Cookie Mueller's life and times. Here are previously unpublished stories - wacky as they are enlightening - along with favorites from Walking Through Clear Water in a Pool Painted Black and other publications. Also the best of Cookie's art columns from Details magazine, and the funniest of her advice columns from the East Village Eye,

on everything from homeopathic medicine to how to cut your cocaine with a healthy substance. This collection is as much an autobiography as it is a map of downtown New York in the early '80s - that moment before Bright Lights, Big City, before the art world exploded, before New York changed into a yuppie metropolis, while it still had a glimmer of bohemian life.

An overview of farm-to-fork safety in the preharvest realm Foodborne outbreaks continue to take lives and harm economies, making controlling the entry of pathogens into the food supply a priority. Pre-harvest factors have been the cause of numerous outbreaks, including *Listeria* in melons, *Salmonella* associated with tomatoes, and Shiga toxin-producing *E.coli* in beef products, yet most traditional control measures and regulations occur at the postharvest stage. Preharvest Food Safety covers a broad swath of knowledge surrounding topics of safety at the preharvest and harvest stages, focusing on problems for specific food sources and food pathogens, as well as new tools and potential solutions. Led by editors Siddhartha Thakur and Kalmia Kniel, a team of expert authors provides insights into critical themes surrounding preharvest food safety, including Challenges specific to meat, seafood, dairy, egg, produce, grain, and nut production Established and emerging foodborne and agriculture-related pathogens Influences of external factors such as climate change and the growing local-foods trend Regulatory issues from both US and EU perspectives Use of pre- and probiotics, molecular tools, mathematical modeling, and one health approaches Intended to encourage the scientific community and food industry stakeholders to advance their knowledge of the developments and challenges associated with preharvest food safety, this book addresses the current state of the field and provides a diverse array of chapters focused on a variety of food commodities and microbiological hazards.

The development of international arbitration as an autonomous legal order comprises one of the most remarkable stories of institution building at the global level over the past century. Today, transnational firms and states settle their most important commercial and investment disputes not in courts, but in arbitral centres, a tightly networked set of organizations that compete with one another for docket, resources, and influence. In this book, Alec Stone Sweet and Florian Grisel show that international arbitration has undergone a self-sustaining process of institutional evolution that has steadily enhanced arbitral authority. This judicialization process was sustained by the explosion of trade and investment, which generated a steady stream of high stakes disputes, and the efforts of elite arbitrators and the major centres to construct arbitration as a viable substitute for litigation in domestic courts. For their part, state officials (as legislators and treaty makers), and national judges (as enforcers of arbitral awards), have not just adapted to the expansion of arbitration; they have heavily invested in it, extending the arbitral order's reach and effectiveness. Arbitration's very success has, nonetheless, raised serious questions about its legitimacy as a mode of transnational governance. The book provides a clear causal theory of judicialization, original data collection and analysis, and a broad, relatively non-technical overview of the evolution of the arbitral order. Each chapter compares international commercial and investor-state arbitration, across clearly specified measures of judicialization and governance. Topics include: the evolution of procedures; the development of precedent and the demand for appeal; balancing in the public interest; legitimacy debates and proposals for systemic reform. This book is a timely assessment of how arbitration has risen to become a key component of international economic law and why its future is far from settled.
