Governing And Managing Knowledge In Asia (2nd Edition)

The Great Perfection (rDzogs chen in Tibetan) is a philosophical and meditative teaching. Its inception is attributed to Vairocana, one of the first seven Tibetan Buddhist monks ordained at Samye in the eight century A.D. The doctrine is regarded among Buddhists as the core of the teachings adhered to by the Nyingmapa school whilst similarly it is held to be the fundamental teaching among the Bonpos, the non-Buddhist school in Tibet. After a historical introduction to Tibetan Buddhism and the Bon, the author deals with the legends of Vairocana (Part I), analysing early documents containing essential elements of the doctrine and comparing them with the Ch'an tradition. He goes on to explore in detail the development of the doctrine in the tenth and eleventh centuries A.D. (Part II). The Tantric doctrines that play an important role are dealt with, as are the rDzogs chen theories in relation to the other major Buddhist doctrines. Different trends in the rDzogs chen tradition are described in Part III. The author has drawn his sources mainly from early unpublished documents which throw light on the origins and development, at the same time also using a variety of sources which enabled him to explicate the crucial position which the doctrine occupies in Tibetan religions.

Publishers' circular and booksellers' record

This is a text book for all doctors but especially GPs, appraisers and registrars. It is written by a 40 year plus front line NHS doctor who for most of his career worked twice to three times the current doctors' Working Time Directive limited week. Chris Heath has been a Paediatric Lecturer in a teaching hospital, an Anaesthetist, various junior specialists and a GP over 30 years in 3 different practices. He has been a GP Trainer and Appraiser and has seen politics and political correctness harm patients' interests constantly over the last half of his career. From the way it selects young doctors to the way they are educated and assessed, the best interests of the patient are largely ignored. This is a text book but it also contains home truths, insights and a warts and all appraisal of how to be a good doctor as well as an unbiased assessment of what is wrong with today's NHS. It also explains why today's politicians, medical schools and doctors will resist the changes that are needed to put the patients' needs first again.

The British Quarterly Review

NEW DIMENSIONS IN ELEMENTARY PARTICLE PHYSICS AND COSMOLOGY summarizes certain results of the author's theoretical research toward developing a mathematically very simple Unified Theory of Elementary Particles and Interactions (UTOEPI.) Here the masses of the particles of the Standard Model, including the Higgs boson (the the so-called God Particle), are directly represented in terms of the interaction. The book introduces a new paradigm of a three-dimensional time, as an essential extension of Einstein's relativity theory. Interrelation between the classical and quantum physics is illustrated. Examples of applications in cosmology and the significance of the neutron decay in the evolution of matter, and of life on the earth, are included.

Process Data in Educational and Psychological Measurement, 2nd Edition

Emergency vascular and endovascular practice comprises almost half the workload undertaken by the majority of vascular surgeons. Most vascular emergencies are characterised by the sudden occlusion, rupture or injury of a blood vessel placing organ, limb and life at risk. An attitude of urgency and of good judgement, both in diagnostic assessment and the application of evidence-based vascular and endovascular techniques, is crucial to the achievement of optimal outcomes. This book is structured with the emphasis on clinical presentation, the objective being to provide accessible and highly practical advice to the vascular surgeon faced with a particular emergency. Distinguished vascular surgeons,

vascular radiologists and other specialists around the world have enriched this book with authoritative contributions reflecting their experience and expertise. For ease of reference the text is divided into nine sections, leading with introductory chapters on general considerations such as pathophysiology, preoperative diagnosis, risk assessment and medico-legal aspects of vascular emergencies. That is followed by a series of clinical sections covering acute cerebrovascular syndromes, acute limb ischaemic states, the acutely swollen limb, thoraco-abdominal catastrophes, acute complications of endovascular aortic repair, regional vascular trauma and iatrogenic injuries. It concludes with a section on miscellaneous, but important, acute vascular challenges. Throughout the book, wherever appropriate, modern endovascular techniques are given full coverage. International in its approach, this book will fast become established as the text devoted to the surgical management of vascular and endovascular emergencies. It is essential reading for vascular surgeons and radiologists and a useful reference source for general and trauma surgeons, angiologists and emergency physicians.

Working World

Are you looking for a career with professional rewards and personal satisfaction? Perhaps you'd like to find meaningful employment in the field of international relations? Working World is the perfect resource for making sound career choices, and is particularly valuable for those interested in exploring a career in international education, exchange, and development. Sherry Mueller, president emeritus of a large nonprofit organization with an international focus, and Mark Overmann, a young professional on his way up, serve as spirited guidance counselors and offer valuable insight on launching a career, not just landing a job. The two authors—representing contrasting personalities, levels of experience, and different generations—engage in an entertaining dialogue designed to highlight alternative approaches to the same destination: making a difference in the world. With a rich mix of anecdotes and advice, the two authors present their individual perspectives on career development: identifying your cause, the art of networking, the value of mentors, and careers as "continuous journeys." Mueller and Overmann push job seekers to challenge assumptions about what it means to pursue a career in international relations and to recognize that the path to career success is rarely straight. To help the job seeker chart the best course, Working World provides specific resources including annotated lists of selected organizations, websites, and further reading. Profiles of twelve professionals, from promising young associates to presidents and CEOs, illustrate the book's main topics. Each professional provides insight into his or her career choices, distills lessons learned, and offers practical advice about building a career in international affairs. All of these resources were chosen specifically to help job seekers map the next steps toward the internship, job, or other opportunity that will give shape to the career they envision.

Realities of Foreign Service Life

Mention a diplomatic career and most people imagine high-level meetings, formal dress and cocktail parties. Few stop to think that behind the occasional glitter of official functions are thousands of families facing all the routines and crises of life—births, deaths, childrearing, divorce—far from home, relatives, and friends, in an unfamiliar and sometimes unfriendly country and culture. This book provides reflections and perspectives on the realities of Foreign Service life as experienced by members of the Foreign Service community around the world. The writers share their unvarnished views on a wide variety of topics they care about: maintaining long-distance relationships, raising teens abroad, dealing with depression, coping with evacuations, readjusting to life in the United States, and many others. These are stories from the diplomatic trenches—true experiences from those who have lived the lifestyle and want to share their hard-learned lessons with others. ?If you are new to the Foreign Service, this

book will offer insights and practical information useful in your overseas tours and when you return home. Even if you are a seasoned veteran of the Foreign Service, the reports and reflections of others may encourage you to compare and evaluate your own experiences. ? If you (or your partner) are contemplating joining the Foreign Service, this book can serve as a reality check, giving you honest, personal perspectives on both the positive and negative aspects of Foreign Service life. ? If you are a student wondering what the Foreign Service is all about, this book will broaden your knowledge and provide you with an insider's view not found in any textbook.

In this new work, Dr Ettie Zilber brings together all the material she has collected over many years of research on this unique group and allows them to voice their own opinions, feelings and stories for the first time. Spanning a long career in education, Dr Ettie Zilber has served at international schools and other educational centers in the US, Israel, Singapore, Spain, Guatemala and China, served on the boards of ECIS and AISH, presented and published on cross-cultural themes and served as an Adjunct Professor for Lehigh University and Endicott College, teaching courses in Comparative Education and Intercultural Communication.

Media Capitalism

This book argues that media and capitalism no longer exist as separated entities, and posits three reasons why one can no longer exist without the other. Firstly, mass media have become indispensable to capitalism due to the media's ability to sell the commodities of mass consumerism. Media capitalism also creates pro-capital attitudes among a target population and establishes an ideological hegemony. Thirdly, media capitalism provides mass deception to hide the pathologies of capitalism, which include mass poverty, rising inequalities, and the acceleration of global warming. To illuminate this, the book's historical chapter traces the emergence of media capitalism. Its subsequent chapters show how media capitalism has infiltrated the public sphere, society, schools, universities, the world of work and finally, democracy. The book concludes by outlining how societies can transition from media capitalism to a post-media- capitalist society.

Assisted reproductive technology (ART) allows people who are infertile the opportunity to conceive children and form much desired families. Over the past few decades, the number of ART procedures conducted in the United States has steadily increased, in part affected by the growing number of women trying to conceive later in their reproductive lives. This demographic shift in baby making has widened to include a variety of other people who experience social infertility, from single persons to same-sex couples. Media exposure and political attention to the use of ART have aroused public concern and controversy. In *Assisted Reproduction*, Alexandra E. Sigillo and Monica K. Miller explore how media, personal differences, societal influences, and psychological processes shape community sentiment toward ART and ART-related laws and policies. This book is recommended for students and scholars of psychology, sociology, gender and women's studies, communication studies, public health, and legal studies.

Online Consumer Behavior

There is broad consensus on the need to shift to a new paradigm of lifestyles and economic development, given the un-sustainability of current patterns. Given this, research on consumer behavior is to play a crucial role in shedding light on the motives underpinning the adoption of responsible behaviors. Stemming from a thorough discussion of existing approaches, this book argues that the

perspective of analysis has to be modified. First, acknowledging that a profile of the responsible consumer does not exist since all of us can be more or less sustainable and environment-friendly: the sustainability of an individual should not be considered as given, being something dynamic that changes according to both subjective and contextual factors. Moreover, the book hypothesises that integrating dimensions and perspectives that have been so far overlooked by mainstream research will help deconstruct responsible behaviors adopting a flexible and holistic approach. Relevant policy implications are discussed, and empirical research on responsible behaviors is illustrated. This book will be of great interest to students and scholars of consumer behavior, sustainable consumption, environmental psychology and environmental studies in general.

Context and Cognition in Consumer Psychology is concerned with the psychological explanation of consumer choice. It pays particular attention to the roles of perception and emotion in accounting for consumers' actions and their interaction with the desires and beliefs in terms of which consumer choice is frequently analyzed. In this engaging book, Gordon Foxall extends and elaborates his theory of consumer action, based on the philosophical strategy of Intentional Behaviorism. In doing so, he introduces the concept of contingency-representation to explore the ways in which consumers mentally represent the consequences of past decisions and the likely outcomes of present consumption. The emphasis is on action rather than behavior and the manner in which the intentional consumer-situation, as the immediate precursor of consumer choice, can be reconstructed in order to explain consumer actions in the absence of the environmental stimuli required by behaviorist psychology. The result is a novel reaffirmation of the role of cognition in the determination of consumer choice. Besides the concept of contingency-representation which the author introduces, the analysis draws upon psychoanalytic concepts, theories of cognitive structure and processing, and the philosophy of perception to generate a stimulating synthesis for consumer research. The book will be of interest to students and researchers in consumer behavior and economic psychology and to all who seek a deeper interdisciplinary understanding of the contextual and cognitive interactions that guide choice in the market place.

As shopping has been transformed from a chore into a major source of hedonistic pleasure, a specifically Russian consumer culture has begun to emerge that is unlike any other. This book examines the many different facets of consumption in today's Russia, including retailing, advertising and social networking. Throughout, emphasis is placed on the inherently visual - not to say spectacular - nature both of consumption generally, and of Russian consumer culture in particular. Particular attention is paid to the ways in which brands, both Russian and foreign, construct categories of identity in order to claim legitimacy for themselves. What emerges is a fascinating picture of how consumer culture is being reinvented in Russia today, in a society which has one, nostalgic eye turned towards the past, and the other, utopian eye, set firmly on the future. Borrowing concepts from both marketing and cultural studies, the approach throughout is interdisciplinary, and will be of considerable interest, to researchers, students and practitioners wishing to gain invaluable insights into one of the most lucrative, and exciting, of today's emerging markets.

Consumer Psychology

The second edition of this successful textbook continues to offer a sophisticated treatment of consumer psychology which is directly related to the concerns of marketing management, especially in terms of market segmentation, product positioning and new product development. It has an international approach that is reflected in language, examples, and scope and it also has a comprehensive and up-to-date coverage of literature and recent research. The new edition takes into account past reviewers and users comments by reducing the amount of material on adaptive/innovative cognitive style and replaces this with a wider range of material on the theme of personality and new product phrase. This edition also includes end-of-chapter questions and suggested further reading.
