What can we do, right now, in our own landscapes, to help solve climate change? Predictions about future effects of climate change range from mild to dire - but we're already seeing warmer winters, hotter summers, and more extreme storms. Proposed solutions often seem expensive and complex, and can leave us as individuals at a loss, wondering what, if anything, can be done. Sue Reed and Ginny Stibolt offer a rallying cry in response - instead of wringing our hands, let's roll up our sleeves. Based on decades of experience, this book is packed with simple, practical steps anyone can take to beautify any landscape or garden, while helping protect the planet and the species that call it home. Topics include: Working actively to shrink our carbon footprint through mindful landscaping and gardening Creating cleaner air and water Increasing physical comfort during hotter seasons Supporting birds, butterflies, pollinators, and other wildlife. This book is the ideal tool for homeowners, gardeners, and landscape professionals who want to be part of the solution to climate change. Advances in Ecology Environment and Conservation Research and Application: 2012 Edition

What if environmentally damaged landscapes could not only be remediated from an ecological standpoint, but also designed to replenish an entire community as well as the nature surrounding it? The Handbook of Regenerative Landscape Design incorporates ecology, engineering, sociology, and design elements into a new paradigm for environmental restoration and the renewal of urban and cultural sites. This is the first resource in the field to examine the collaborative roles of scientists, landscape architects, and urban planners in transforming degraded landscapes into sustainable communities for both people and wildlife. Top practitioners and theorists from different fields and perspectives contribute innovative case studies that converge in their emphasis on new uses for reclaimed land, rather than a return to its original state. In addition, this book is one in only a handful to address the system conditions necessary for the repair of severely degraded landscapes, especially in an urban context. It elucidates the most suitable remediation strategies for treating degraded environments such as industrial landfills, mining sites, buried urban rivers, heavily polluted or effectively destroyed wetlands, Superfund sites, and abandoned factories. Bringing the perspectives of landscape architects, scientists, and urban planners to a wider audience, the Handbook of Regenerative Landscape Design demonstrates how ecological landscape restoration processes can facilitate sociological and urban renewal initiatives.

Writing specifically for new homeowners and those planning renovations, Bath pulls from her twenty-five-plus years of experience helping thousands of clients. Even though Bath faces a wide range of landscape design situations in her work, the solutions to these important landscape problems remain constant. That's why The Landscape Design Answer Book is unique. Bath reduces the subject of landscape design to about three hundred specific design problems (or goals) a homeowner may face--and provides solutions that can be universally applied.

Handbook of Regenerative Landscape Design

Climate change and the pressures of escalating human demands on the environment have had increasing impacts on landscapes across the world. In this book, world-class scholars discuss current and pressing issues regarding the landscape, landscape ecology, social and economic development, and adaptive management. Topics include the interaction between landscapes and ecological processes, landscape modeling, the application of landscape ecology in understanding cultural landscapes, biodiversity, climate change, landscape services, landscape planning, and adaptive management to provide a comprehensive view that allows readers to form their own opinions. This book presents solutions to address water security in rapidly urbanizing cities, and explores the new paradigms of water security in changing contexts. Highlighting the latest developments in water research, changes in water policy, and current discourses on water security, the book also provides information and tools for local stakeholders, water managers, and policymakers to build the capacity for sustainable water governance. The book discusses a wide range of sustainable solutions and their implementation to ensure that the balance between water supply and demand remains sustainable in the long term, with a focus on local solutions to build capacity and developing policy awareness for a wide range of stakeholders. As the concept of urban water security in changing contexts is open to multiple interpretations, the authors set out various approaches. Providing an overview of the changing perspectives of urban water security in different contexts, the book is based on findings of the Asia-Pacific Network water security project at the United Nations University, Tokyo, as well as the authors' current research-based at Pokhara University, Nepal, Hosei University, Tokyo, Institute for the Global Environmental Strategies, Japan and the Australian National University, Australia. The book also includes the views of international authorities (such as water experts) on the subject. The solutions are complemented by analysis of case studies of various localized sustainable solutions at different scales. The book is a valuable resource for water professionals and policymakers around the globe, academics, teachers working in water-related areas, NGOs, think tanks, water research institutes, donor organizations, and international and local water utility services.

While landscaping has the potential to be part of the solution to certain environmental problems, the quest for beauty can also produce effects that are harmful to the environment. Sustainable Landscaping: Principles and Practices examines landscape practices that adversely affect the environment, which occur in the process of constructing, implementing, and managing residential and commercial landscapes. It explores ways to change these practices to have a more positive effect, describing the principles of sustainable landscaping and proposing solutions to challenges that can arise. This book covers a wide range of landscape practices that fall under the broad subject of sustainability, providing detailed coverage of principles including the following: Conducting sustainability audits Using plants to maximize their benefits Regulating solar heat gain and loss with seasonal climate changes Directing wind using plants to minimize heat loss in winter and maintain cooling breezes in summer Addressing water quantity and quality Managing storm water Understanding and improving soil health Minimizing the impact of pesticides and herbicides Conserving energy and reducing air pollution Managing resources and reducing waste Each topic is introduced by providing background information and terminology, followed with practical solutions that are being implemented by landscape professionals. Written for a general audience—from students of landscaping to homeowners and professionals in the landscaping industry—this book provides background information and practical solutions, offering sustainable approaches to the way landscapes are designed and managed.

Business leaders need to embrace sustainability in order to ensure the lasting success of their organizations. Co-authors Suhas Apte and Jagdish Sheth bring their expertise from practice and from academia to illustrate how business leaders can embed sustainability in a truly holistic and transformative way. Through an examination of such companies as Walmart, AT&T, IKEA and the Tata Group, Apte and Sheth have developed a proven and actionable framework rooted in the real world success of these companies. The case studies reveal how business leaders proactively engage,

energize and promote market sustainability to all of their stakeholders including customers, employees, suppliers, investors and the government. The Sustainability Edge enables companies to critically engage their stakeholders and influence them to accept sustainability as part of their core mission.
