Modern Architecture A-Z

Explore the A to Z of modern space. From Gio Ponti's colored geometries to Zaha Hadid's free-flowing futurism, this comprehensive overview features almost 300 profiles of architects, styles, movements, and trends that have shaped structures from the 19th to the 21st century.

Architecture in the Twentieth Century

After several pages of prologue summing up 18th century highlights--especially the rise in importance of geometry--some forty pages cover 1784-1916, focusing on the heavily fenestrated high-rises of the Chicago School and the iron and glass pavilions of Europe. The chapter spanning 1892-1925 concentrates on the many disputes over the trajectory of modernism: Nieuwe Kunst, Stile Liberty, Jugendstil, and Art Nouveau, all arguing the direction that the boom of prisons, hospitals, schools, town halls, and other institutional buildings would take. Three more time divisions follow and a concise compendium of architect biographies ends the volume. Along with an array of great pictures (par for Taschen), Gossel and Leuthauser--both active in the private sector--add a strong prose style attentive to debates among architects and the socioeconomic stage on which architects act. Annotation copyrighted by Book News, Inc., Portland, OR

Modern Architecture

This new account of international modernism explores the complex motivations behind this revolutionary movement and assesses its triumphs and failures. The work of the main architects of the movement such as Frank Lloyd Wright, Adolf Loos, Le Corbusier, and Mies van der Rohe is re-examined shedding new light on their roles as acknowledged masters. Alan Colquhoun explores the evolution of the movement from Art Nouveau in the 1890s to the megastructures of the 1960s, revealing the often contradictory demands of form, function, social engagement, modernity and tradition.

100 Contemporary Houses

Open the door into 100 of the most beautiful and pioneering houses of the past two decades. With featured architects including Daniel Libeskind, Herzog & de Meuron, and Zaha Hadid, this is a dependable global digest of the nuances, challenges, and opportunities of turning all the emotional and practical requirements of "home" into a constructed...

Domus 1940s

In this freshly revised edition, discover the ultimate architecture and design journal's coverage of the years 1940 to 1949, from the widespread destruction caused by World War II to the reconstruction, democratization, and search for new social values in the postwar era.

Industrial Design A-Z

From consumer products and packaging to transportation and equipment, this comprehensive work traces the evolution of industrial design from the Industrial Revolution to the present day

Architecture

From airports to Ziggurats, this title explores the world's greatest buildings with illustrations that take you to the heart of the world's landmark buildings. Featuring major historical styles, and covering parts of the world, it is suitable for architecture enthusiasts, and discovers 5,000 years of architectural design, style, and construction.

Art Du Moyen Âge Et Les Trésors de la Renaissance

From delicate jewelry to the most elaborate goblet, this book brings together gems of the applied arts from the Middle Ages right through to the Renaissance. The 216 hand-colored copperplate engravings offer the contemporary reader both a record and a sourcebook of all that can be achieved by the human hand and creative imagination.

Design of the 20th Century

This text is a journey through the shapes and colours, forms and functions of design history in the 20th century. It contains an A-Z of designers and design schools, which builds into a complete picture of contemporary living.

Albert Kahn's Industrial Architecture

Albert Kahn is probably the most important industrial architect of the 20th century. With his factory for the Ford T models, designed for mass production, he found himself at the beginning of modern industrial architecture. His industrial buildings inspired the architects of European Modernism. They were the examples by which the structural rationality of Kahn's industrial developments became the guiding principle for the New Building movement up until today. The unrivalled monograph with its numerous photographs, plan layouts, site plans, and virtual 3D models comprehensively documents the buildings of Albert Kahn, which he was able to construct in a very short time due to his system-based working method - in the USA but also in the Soviet Union, Brazil, Sweden, France, China, Japan, and Australia.

Architecture

From ancient and classical masterpieces to contemporary, cutting-edge buildings, architecture has defined our world throughout history. Drawing its examples from all around the globe, *Architecture: The Whole Story* is a richly illustrated and comprehensive account of the architects, plans, designs and constructions that over the centuries have most engaged our minds, inspired our imaginations and raised our spirits. For everyone who has ever wished for greater insight into the art of building design, *Architecture: The Whole Story* provides the analytical tools to appreciate to the fullest the variety of architectural achievement and the built environment in the world.

A New History of Modern Architecture

Combining a fascinating, thought-provoking and – above all – readable text with over 800 photographs, plans, and sections, this exciting new reading of modern architecture is a must for students and architecture enthusiasts alike. Organized largely as a chronology, chapters necessarily overlap to allow

for the discrete examination of key themes including typologies, movements, and biographical studies, as well as the impact of evolving technology and country-specific influences.

Modern Architecture

In 1896, Otto Wagner's "Modern Architecture" shocked the European architectural community with its impassioned plea for an end to eclecticism and for a "modern" style suited to contemporary needs and ideals, utilizing the nascent constructional technologies and materials. Through the combined forces of his polemical, pedagogical, and professional efforts, this determined, newly appointed professor at the Vienna Academy of Fine Arts emerged in the late 1890s - along with such contemporaries as Charles Rennie Mackintosh in Glasgow and Louis Sullivan in Chicago - as one of the leaders of the revolution soon to be identified as the "Modern Movement." Wagner's historic manifesto is now presented in a new English translation - the first in almost ninety years - based on the expanded 1902 text and noting emendations made to the 1896, 1898, and 1914 editions. In his introduction, Dr. Harry Mallgrave examines Wagner's tract against the backdrop of nineteenth-century theory, critically exploring the affinities of Wagner's revolutionary élan with the German eclectic debate of the 1840s, the materialistic tendencies of the 1870s and 1880s, and the emerging cultural ideology of modernity. Modern Architecture is one of those rare works in the literature of architecture that not only proclaimed the dawning of a new era, but also perspicaciously and cogently shaped the issues and the course of its development; it defined less the personal aspirations of one individual and more the collective hopes and dreams of a generation facing the sanguine promise of a new century

B is for Bauhaus

This book is not a dictionary, though it tells you all you need know about everything from Authenticity to Zips. It's not an autobiography, though it does offer a revealing and highly personal inside view of contemporary culture. It's an essential tool kit for understanding the modern world. It's about what makes a Warhol a genuine fake; the creation of national identities; the mania to collect. It's also about the world seen from the rear view mirror of Grand Theft Auto V; digital ornament and why we value imperfection. It's about drinking a bruisingly dry martini in Adolf Loo's American bar in Vienna, and about Hitchcock's film sets. It's about fashion and technology, about politics and art.

The Historiography of Modern Architecture

The history of modern architecture as constructed by historians and key texts. Writing, according to Panayotis Tournikiotis, has always exerted a powerful influence on architecture. Indeed, the study of modern architecture cannot be separated from a fascination with the texts that have tried to explain the idea of a new architecture in a new society. During the last forty years, the question of the relationship of architecture to its history—of buildings to books—has been one of the most important themes in debates about the course of modern architecture. Tournikiotis argues that the history of modern architecture tends to be written from the present, projecting back onto the past our current concerns, so that the "beginning" of the story really functions as a "representation" of its end. In this book the buildings are the quotations, while the texts are the structure. Tournikiotis focuses on a group of books by major historians of the twentieth century: Nikolaus Pevsner, Emil Kaufmann, Sigfried Giedion, Bruno Zevi, Leonardo Benevolo, Henry-Russell Hitchcock, Reyner Banham, Peter Collins, and Manfredo Tafuri. In examining these writers' thoughts, he draws on concepts from critical theory, relating architecture to broader historical models.

Arts décoratifs des années 70

About decorative art in the 1970s.

Die Welt der Ornamente

Teeming with tapestries, manuscript illuminations, carpets, and tiles, this far-reaching compendium brings together the two greatest 19th-century catalogues of ornament into one indispensable reference book. Encompassing designs from medieval times through to the 19th century, in styles as diverse as Egyptian, Etruscan, or Middle Eastern, this...

Contemporary Architecture

Over the course of 30 years Edward S. Curtis exhaustively documented America's first inhabitants. Follow along on his visits to 80 American Indian tribes from the Mexican border to the Bering Strait--working up to 16 hours a day to gain their trust and document their traditional way of life as it was already beginning to die out. This unabridged, ...

The North American Indian

The Brutalist aesthetic is enjoying a renaissance - and this book documents Brutalism as never before. In the most wide-ranging investigation ever undertaken into one of architecture's most powerful movements, more than 850 Brutalist buildings - existing and demolished, classic and contemporary - are organized geographically into nine continental regions. Much-loved masterpieces in the UK and USA sit alongside lesser-known examples in Europe, Asia, Australia, and beyond - 102 countries in all, proving that Brutalism was, and continues to be, a truly international architectural phenomenon.

Atlas of Brutalist Architecture

Jean-Nicolas-Louis Durand (1760–1834) regarded the *Précis of the Lectures on Architecture* (1802–5) and its companion volume, the *Graphic Portion* (1821), as both a basic course for future civil engineers and a treatise. Focusing the practice of architecture on utilitarian and economic values, he assailed the rationale behind classical architectural training: beauty, proportionality, and symbolism. His formal systematization of plans, elevations, and sections transformed architectural design into a selective modular typology in which symmetry and simple geometrical forms prevailed. His emphasis on pragmatic values, to the exclusion of metaphysical concerns, represented architecture as a closed system that subjected its own formal language to logical processes. Now published in English for the first time, the *Précis* and the *Graphic Portion* are classics of architectural education.

Précis of the Lectures on Architecture

"Une mine d'or à parcourir encore et toujours, un de ces livres qui fournira aux bâtisseurs actuels et futurs de notre monde tout le savoir dont ils ont besoin pour aborder les questions actuelles et celles auxquelles ils seront confrontés". *ArchDaily Architecture* is a compelling mixture of stability and flux. In its solid forms, time and space collide, amalgamating distant influences, elements that have been around for over 5, 000 years and others that were (re-)invented yesterday. *Elements of Architecture* focuses on the fragments of the rich and complex architectural collage. Window, facade, balcony, corridor, fireplace, stair, escalator, elevator : The book seeks to excavate the micro-narratives of building detail. The result is no single history, but rather the web of origins, contaminations, similarities, and differences in architectural evolution, including the influence of technological advances, climactic adaptation, political calculation, economic contexts, regulatory requirements, and new digital regimes. Derived from Koolhaas' exhaustive and much-lauded exhibition at the 2014 Venice Architecture Biennale, this is an essential toolkit to understanding the pieces, parts, and fundamentals that comprise structure around the globe. Designed by Irma Boom, the book contains essays from Rem Koolhaas, Stephan Trueby, Manfredo di Robilant, and Jeffrey Inaba; interviews with Werner Sobek and Tony Fadell (of Nest); and an exclusive photo essay by Wolfgang Tillmans.

Elements of Architecture

Scandtastic!: The best of design from northern Europe Scandinavians are exceptionally gifted in design. They are world-famous for their inimitable, democratic designs which bridge the gap between crafts and industrial production. The marriage of beautiful organic forms with everyday functionality is one of the primary strengths of Scandinavian design and one of the reasons why Scandinavian creations are so cherished and sought after. This all-you-need guide includes a detailed look at Scandinavian furniture, glass, ceramics, textiles, jewelry, metalware and industrial design from 1900 to the present day, with in-depth entries on over 180 designers and design-led companies, plus essays on the similarities and differences in approach between Norway, Sweden, Finland, Iceland, and Denmark. Also included is a list of important design-related places to visit for readers planning to travel to Scandinavia. Including: **DESIGNERS** Verner Panton, Arne Jacobsen, Alvar Aalto, Timo Sarpaneva, Hans Wegner, Tapio Wirkkala, Sigvard Bernadotte, Stig Lindberg, Ingeborg Lundin, Finn Juhl, and many others. **COMPANIES** Fritz Hansen, Artek, Le Klint, Gustavsberg, Iittala, Fiskars, Volvo, Saab, Orrefors, Royal Copenhagen, Holmegaard, Arabia, Marimekko, George Jensen, and many more.

Scandinavian Design

Meet the artist whose majestic wave sent ripples across the world. Hokusai, master artist and printmaker, is not only one of the giants of Japanese art but a father figure to Western modernism, inspiring a whole new notion of space for artists from Monet to Morisot, Cassatt to Klimt. Spanning erotic books, historical novels, and album prints, ..

Hokusai

Since the mid 1970s, there has been an extraordinary renewal of interest in early modern architecture, both as a way of gaining insight into contemporary architectural culture and as a reaction to neo-conservative postmodernism. This book undertakes a critical reappraisal of the notion of modernity in Mexican architecture and its influence on a generation of Mexican architects whose works spanned the 1920s through the 1960s. Nine essays by noted architects and architectural historians cover a range of topics from broad-based critical commentaries to discussions of individual architects and buildings. Among the latter are the architects Enrique del Moral, Juan O'Gorman, Carlos Obregón Santacilia, Juan Segura, Mario Pani, and the campus and stadium of the Ciudad Universitaria in Mexico City. Relatively little has been published in English regarding this era in Mexican architecture. Thus, *Modernity and the Architecture of Mexico* will play a groundbreaking role in making the underlying assumptions, ideological and political constructs, and specific architect's agendas known to a wide audience in the humanities. Likewise, it should inspire greater appreciation for this undervalued body of works as an important contribution to the modern movement.

Modernity and the Architecture of Mexico

Découvrez l'ABCdaire de l'espace moderne. Des formes géométriques colorées de Gio Ponti au futurisme libre et fluide de Zaha Hadid, ce panorama très complet présente plus de 280 portraits et descriptions des architectes, des styles, des mouvements et des tendances qui sont à l'origine des constructions réalisées entre le XIXe et le XXIe siècle.

L'architecture moderne de A à Z

The most influential architectural essays written since the Renaissance, copiously illustrated and neatly organized chronologically and by country. Discover the theories behind the structures in which we live, work, and play. From Alberti and Palladio to Le Corbusier and Koolhaas, this is the all-in-one, must-have book for anyone interested in...

Modern Architecture

Inspired by the early style of Corbusier and ideas on Mediterranean architecture espoused by the likes of Bernard Rudofsky and Josep Lluís Sert, a younger generation of architects found the perfect conditions to explore the future of the Mediterranean house in Cadaqués? a small fishing village on the Spanish Costa Brava that was also home, or the summer meeting ground, for some of the past century?s greatest artistic figures, including Dalí, Picasso, Miró, and Duchamp.0In this new book, photos from the period show the distinctive style and environment of Cadaqués and 22 homes designed by Federico Correa, Alfonso Milà, José Antonio Coderch, Francesc Joan Barba Corsini, Peter Harnden, Lanfranco Bombelli, Oscar Tusquets, and Lluís Clotet. Edited by Nacho Alegre, it features an introduction by Oscar Tusquets and also tells of the friendships and influences that existed between this group of architects, and how their architecture came to be.

Architectural Theory. Pioneering Texts on Architecture from the Renaissance to Today

Since Osaka World Expo '70 brought contemporary forms center stage, Japan has been a key player in global architecture. Presenting the latest in Japanese building, this book reveals how the likes of Tadao Ando, SANAA, Shigeru Ban, Kengo Kuma, and Junya Ishigami are relinking past, present, and future--building greener and smarter than ever before.

The Modern Architecture of Cadaqués 1955-71

Master midcentury modern design principles with this simple and snappy interior design handbook. Do you love rich and vibrant timeless design? Are you on a budget and planning a project based on this hot trend? Are you excited to find out how to create the look for your home, hotel or motel? Award-winning author Ivy Ngeow has been in the practice of architecture and interior design for more than 25 years,

starting her own firm in 2001. She was architecture and interiors columnist for London's Wimbledon Time and Leisure magazine for 7 years. Apart from residential properties in New York and London, her experience includes "vacay homes" in the Hamptons, Caribbean resorts, Gleneagles Golf and Spa Resort, Claridges and boutique hotels in Havana and Penang, two UNESCO World Heritage sites. Now Ivy is ready to share some of her best-kept interior design secrets with you. Influenced by iconic cultural references such as the Queen's Gambit, Twin Peaks, Vegas and Hitchcock, Ivy will inspire you in your own project, large or small. *Midcentury Modern: 15 Interior Design Ideas* is a concise style guide with instant ideas and know-how to save you research, time and money for creating rooms of maximum impact with minimum fuss. Inside you'll find: 15 easy-to-read illustrated ideas, each from a Queen's Gambit scene to provide a pithy overview; Brief history to explain the concept; Recommendations to guide you on the design elements; Color palettes, furniture, lighting, wall and floor finishes to help you style a room, new or old; HOT TIP in every chapter to amp up any design and give it the professional touch; BONUS: 3 classic easy celebratory cocktail recipes to thirst-quench like the Queen. This lifestyle handbook will teach you how to interior design like the Queen's Gambit. Perfect for amateurs, designers, enthusiasts or modernistas.

Contemporary Japanese Architecture

Scholars have long stressed the problem of ornament and expression when considering Viennese modernism. By the first decade of the 20th century, however, the avant-garde had shifted its focus from the surface to the interior. Adolf Loos (1870–1933), together with Josef Frank (1885–1967) and Oskar Strnad (1879–1935), led this generation of architects to interpret modernism through culture and lifestyle. They were interested in the experience of architectural space: how it could be navigated, inhabited, and designed to reflect the modern way of life while also offering respite from it. *The New Space* traces the theoretical conversation about space carried out in the writings and built works of Loos, Frank, and Strnad over four decades. The three ultimately explored what Le Corbusier would later—independently—term the architectural promenade. Lavishly illustrated with new photography and architectural plans, this important book enhances our understanding of the development of modernism and of architectural theory and practice.

MIDCENTURY MODERN: 15 INTERIOR DESIGN IDEAS

Perrault argues that rules of architecture be determined by reason, not by ancient precedent.

The New Space

Brasilia, Caracas, Mexico City, Rio de Janeiro ... these are cities synonymous with some of the most innovative and progressive architecture of the twentieth century. The period between 1930 and 1960 in particular, when many Latin American economies expanded rapidly, was an era of incomparable inventiveness and creative production, as the various governments strove to shake off their colonial pasts and make public their modernising intentions. This book focuses on major state-funded architectural projects, featuring not only the high-profile prestigious building like the House of Representatives in Brasilia but also social architecture such as schools and low-cost housing developments. Architects like Pani, Costa, Reidy and Niemeyer, who undertook this work with considerable autonomy and significant financial resources, in effect became social planners, their avant-garde aesthetic and technical experimentation often being teamed with radical social agendas. By 1960, the year in which Brasilia was inaugurated, economic growth in the region was slowing and faith in the modernist project in general was faltering. The English-speaking world, which had previously endorsed and even envied Latin American architectural production, changed its opinion and largely dismissed it from the history of twentieth-century architecture. *Building the New World* redresses the balance. It provides an accessible introduction to the most important examples of state-funded modernism in Latin America during a period of almost unimaginable optimism, when politicians and architects saw architecture as, literally, a way of building themselves out of underdevelopment and into the new world of a culturally rich and socially inclusive future.

Ordonnance for the Five Kinds of Columns after the Method of the Ancients

In the decades following World War II, modern architecture spread around the globe alongside increased modernization, urbanization, and postwar reconstruction—and it eventually won widespread acceptance. But as the limitations of conventional conceptions of modernism became apparent, modern architecture has come under increasing criticism. In this collection of essays, experienced

and emerging scholars take a fresh look at postwar modern architecture by asking what it meant to be "modern," what role modern architecture played in constructing modern identities, and who sanctioned (or was sanctioned by) modernism in architecture. This volume presents focused case studies of modern architecture in three realms—political, religious, and domestic—that address our very essence as human beings. Several essays explore developments in Czechoslovakia, Romania, and Yugoslavia and document a modernist design culture that crossed political barriers, such as the Iron Curtain, more readily than previously imagined. Other essays investigate various efforts to reconcile the concerns of modernist architects with the traditions of the Roman Catholic Church and other Christian institutions. And a final group of essays looks at postwar homebuilding in the United States and demonstrates how malleable and contested the image of the American home was in the mid-twentieth century. These inquiries show the limits of canonical views of modern architecture and reveal instead how civic institutions, ecclesiastical traditions, individual consumers, and others sought to sanction the forms and ideas of modern architecture in the service of their respective claims or desires to be modern.

Building the New World

Combining a theoretical treatment of the architectural language with a record of the Post-Modern movement at six different stages in its history, this book defines Post-Modernism in architecture. The buildings of Robert Venturi and Michael Graves, among others, are featured.

Sanctioning Modernism

Phaidon's acclaimed breakthrough into the glorious world of global interior design - now with an elegant green velvet cover Phaidon's much-lauded *Interiors: The Greatest Rooms of the Century* is the ultimate global celebration of residential interior design and decorating. With 400 rooms organized by designer from A- Z, the book goes beyond decorators, designers, and architects to highlight exquisite interiors designed by fashion designers, artists, style icons, and film stars, each of whom has made a unique contribution to the world of interior design. Ranging from the beginning of the twentieth century to the present day, the book features everything from chateaux, town houses, and penthouses - to desert ranches, beach houses, and tiny apartments in more than 25 countries. This is the essential inspirational source book for design aficionados, anyone who is interested in beautiful rooms, and for everyone who cares about the spaces in which they live.

The Language of Post-modern Architecture

"The age of multimedia constitutes a great challenge for libraries as they have to reinvent themselves to meet the constantly growing demands of digital applications. As a result, within the past decade, libraries have evolved from introverted hoards of knowledge to globally networked information and communication hubs. The architectural implementation of this transformation process has resulted in sophisticated buildings that succeed in combining impressive architecture with the complex contemporary requirements. The new edition of 'Masterpieces: Library Architecture + Design' shows that this process of transformation is far from over. Whether new building, conversion or extension, it presents new masterpieces of library design from around the world. The successful combination of contemporary architecture and cutting-edge technology is evidence that in the digital age, this type of building is as topical as never before."--Web page for this work.

Interiors (Green Edition)

Ravnikar, 1907–1993, is considered the central figure in Slovenia's post-WWII architecture. He was Joze Plecnik's most famous student. Plecnik studied under Otto Wagner. Ravnikar worked for Le Corbusier in Paris as of 1939 after completing his studies in 1935. His thorough planning reflects Plecnik's poetic architecture, while his formal work was in line with Le Corbusier's vision of urban planning and modern architecture. Ravnikar was his own man artistically, and wasn't only successful as an architect. How work also made him an important personage in the development of the architecture department. He was a critic and essayist for the Slovenian and international media. All of this influenced generations of Slovenian architects and explains why Ravnikar can be felt in almost all major Slovenian buildings and monuments. This monograph can be viewed as the result of an examination of Ravnikar's oeuvre. It contains documentation on his buildings and written work, as well as contributions by Friedrich Achleitner, William J.R. Curtis, Friedrich Kurrent, Boris Podrecca and many others.

American Art Deco

Art Deco architecture flourished in large cities and small towns throughout America in the 1920s and 1930s. The style is now captured in over 500 color photos of 75 lavish and innovatively designed buildings across the country that have been preserved both outside and in, giving the full scope of this beloved, exciting style.

Art Deco Complete

work on the subject for many years to come." "With over 1,000 illustrations in colour and black-and-white." --Book Jacket.

New York Art Deco

The first guidebook devoted exclusively to New York City's Art Deco treasures. Winner of a 2017–2018 New York City Book Award presented by the New York Society Library Of all the world's great cities, perhaps none is so defined by its Art Deco architecture as New York. Lively and informative, New York Art Deco leads readers step-by-step past the monuments of the 1920s and '30s that recast New York as the world's modern metropolis. Anthony W. Robins, New York's best-known Art Deco guide, includes an introductory essay describing the Art Deco phenomenon, followed by eleven walking tour itineraries in Manhattan—each accompanied by a map designed by legendary New York cartographer John Tauranac—and a survey of Deco sites across the four other boroughs. Also included is a photo gallery of sixteen color plates by nationally acclaimed Art Deco photographer Randy Juster. In New York Art Deco, Robins has distilled thirty years' worth of experience into a guidebook for all to enjoy at their own pace. A native New Yorker and twenty-year veteran of the New York City Landmarks Commission, Anthony W. Robins is the author of books on Grand Central Terminal, the World Trade Center, and the art and architecture of the New York subway system. A popular leader of walking tours all over New York City, he is best known for Art Deco, and organized the city's first regularly scheduled series of Art Deco tours, sponsored by the Art Deco Society of New York. He is the recipient of the 2017 Guiding Spirit Award from the Guides Association of New York City.

American Art Deco

Explores the tradition of the streamlined design and reveals how it was manifested in the great buildings, furniture, and merchandise of the 1930s

Art Deco City

'My passion for the Art Deco style probably stems from the fact that I was born in that glorious era... I hope the audience of "The Art Deco City" will enjoy the fruits of my Art Deco travels throughout the world.' Art Deco reflected the new industrial age drawing from a variety of influences including ancient Egyptian, Moorish and Mayan motifs and the Cubism, Fauvism and De Stijl movements. The Art Deco style gained prominence in the 1920s, but it was not only architects that embraced its new design ideas: interior and product designers and craftsmen also took inspiration and none more so than architectural furniture designers. Drawing inspiration from the UK, Europe and the USA, this beautiful and comprehensive book celebrates the world's greatest Art Deco buildings, displaying the stunning and diverse range of architecture and design that announced this new movement's aesthetic intent. AUTHOR: Arnold Schwartzman is an Oscar-winning film-maker, a noted graphic designer, and the author of a score of books. He began his design career in British television. In 1978, he moved to Hollywood. He was the Director of Design for the 1984 Los Angeles Olympic Games, and for a number of years has designed many of the key graphic elements for the annual Academy Awards. In 2010, he created the two murals for the Grand Lobby of Cunard's "Queen Elizabeth". In 2001, he was awarded an OBE and in 2006 he was appointed a Royal Designer by the RSA. He is the author of London At Deco (Palazzo Editions 2010, 2013). SELLING POINTS: * A beautiful collection of some of the world's greatest Art Deco buildings - from factories, hotels and underground stations to theatres and private * More than 200 stunning photographs offer a visual journey through Europe's cities, the USA and UK * By the author/photographer of London Art Deco (TCM 8595) Full colour throughout

Art Deco Architecture

Art Deco burst upon the world for a brief but unforgettable existence during the 1920s and 1930s. It embraced new media, such as the cinema and radio, as well as new forms of transport and the associated buildings, and above all brought a sense of luxury, fun and escapism to the world during some of the hardest times. Art Deco Architecture - The Inter War Period examines the sources and origins of the style from before the First World War. It offers an in-depth exploration of the origins, inspirations and political backdrop behind this popular style. Lavishly illustrated with images taken especially for the book, topics covered include: a worldwide examination of the spread and usage of Art Deco; short biographical essays on architects and architectural practices; an in-depth examination of French architects and their output from this period; an introduction to stunning and little-known buildings from around the world and finally, the importance of World Fairs and Expositions in the spread of Art Deco. Will be of great interest to all architecture students and Art Deco enthusiasts and is lavishly illustrated with 299 colour photographs especially taken for the book. Mike Hope is an author, lecturer, curator and designer and tours extensively lecturing on architecture and design.

American Art Deco

Filled with color examples of art, architecture, and decorative craft, this volume explores America's contribution to one of the 20th century's most influential artistic movements.

Washington and Baltimore Art Deco

Art Deco buildings still lift their modernist principles and streamlined chrome into the skies of Baltimore and Washington, D.C. Second Place Winner of the Design and Effectiveness Award of the Washington Publishers The bold lines and decorative details of Art Deco have stood the test of time since one of its first appearances in the International Exhibition of Modern Decorative and Industrial Arts in Paris in 1925. Reflecting the confidence of modern mentality—streamlined, chrome, and glossy black—along with simple elegance, sharp lines, and cosmopolitan aspirations, Art Deco carried surprises, juxtaposing designs growing out of speed (racecars and airplanes) with ancient Egyptian and Mexican details, visual references to Russian ballet, and allusions to Asian art. While most often associated with such masterworks as New York's Chrysler Building, Art Deco is evident in the architecture of many U.S. cities, including Washington and Baltimore. By updating the findings of two regional studies from the 1980s with new research, Richard Striner and Melissa Blair explore the most significant Art Deco buildings still standing and mourn those that have been lost. This comparative study illuminates contrasts between the white-collar New Deal capital and the blue-collar industrial port city, while noting such striking commonalities as the regional patterns of Baltimore's John Jacob Zinc, who designed Art Deco cinemas in both cities. Uneven preservation efforts have allowed significant losses, but surviving examples of Art Deco architecture include the Bank of America building in Baltimore (now better known as 10 Light Street) and the Uptown Theater on Connecticut Avenue NW in Washington. Although

possibly less glamorous or flamboyant than exemplars in New York or Miami, the authors find these structures—along with apartment houses and government buildings—typical of the Deco architecture found throughout the United States and well worth preserving. Demonstrating how an international design movement found its way into ordinary places, this study will appeal to architectural historians, as well as regional residents interested in developing a greater appreciation of Art Deco architecture in the mid-Atlantic region.

Modern Architecture in Latin America

Modern Architecture in Latin America: Art, Technology, and Utopia is an introductory text on the issues, polemics, and works that represent the complex processes of political, economic, and cultural modernization in the twentieth century. The number and types of projects varied greatly from country to country, but, as a whole, the region produced a significant body of architecture that has never before been presented in a single volume in any language. *Modern Architecture in Latin America* is the first comprehensive history of this important production. Designed as a survey and focused on key examples/paradigms arranged chronologically from 1903 to 2003, this volume covers a myriad of countries; historical, social, and political conditions; and projects/developments that range from small houses to urban plans to architectural movements. The book is structured so that it can be read in a variety of ways—as a historically developed narrative of modern architecture in Latin America, as a country-specific chronology, or as a treatment of traditions centered on issues of art, technology, or utopia. This structure allows readers to see the development of multiple and parallel branches/historical strands of architecture and, at times, their interconnections across countries. The authors provide a critical evaluation of the movements presented in relationship to their overall goals and architectural transformations.

The Grove Encyclopedia of American Art

Arranged in alphabetical order, these 5 volumes encompass the history of the cultural development of America with over 2300 entries.

Erté

Perhaps no individual is more associated with the 20th century art deco revival than Russian-born French artist and designer, Erté. Although his talent spanned many creative fields, Erté is perhaps best-known for his theatre and fashion designs, which were often later translated into beautiful silkscreen prints. Few can fail to be charmed by *Symphony in Black*, one of his most famous designs depicting a slender figure walking her dog. Throughout his lifetime Erté designed over 200 covers for *Harper's Bazaar* and his works have been reproduced and copied countless times since, oozing a timeless air of class and sophistication. Combining fresh and thoughtful text and beautiful illustrations, including jewellery and sculpture inspired by his two-dimensional designs, this coffee-table book is the definitive Erté companion.

Modern Architecture

In 1896, Otto Wagner's "Modern Architecture" shocked the European architectural community with its impassioned plea for an end to eclecticism and for a "modern" style suited to contemporary needs and ideals, utilizing the nascent constructional technologies and materials. Through the combined forces of his polemical, pedagogical, and professional efforts, this determined, newly appointed professor at the Vienna Academy of Fine Arts emerged in the late 1890s - along with such contemporaries as Charles Rennie Mackintosh in Glasgow and Louis Sullivan in Chicago - as one of the leaders of the revolution soon to be identified as the "Modern Movement." Wagner's historic manifesto is now presented in a new English translation - the first in almost ninety years - based on the expanded 1902 text and noting emendations made to the 1896, 1898, and 1914 editions. In his introduction, Dr. Harry Mallgrave examines Wagner's tract against the backdrop of nineteenth-century theory, critically exploring the affinities of Wagner's revolutionary élan with the German eclectic debate of the 1840s, the materialistic tendencies of the 1870s and 1880s, and the emerging cultural ideology of modernity. *Modern Architecture* is one of those rare works in the literature of architecture that not only proclaimed the dawning of a new era, but also perspicaciously and cogently shaped the issues and the course of its development; it defined less the personal aspirations of one individual and more the collective hopes and dreams of a generation facing the sanguine promise of a new century.

Art Deco Interiors

By the time of the great Paris Exhibition of 1925, the idea that an interior and its furnishings should form a complete design--a "total look"--dominated the thinking of both designers and their sophisticated clients. In the later 1920s and 1930s, whole studios were established, notably in France and the United States, to serve the needs of a design- and style-conscious middle class intent on showing off its newly refined taste for things modern and exotic: the richly lacquered screen, the tubular steel chair, the vivid geometric carpet. Art Deco Interiors documents this flourishing of design ingenuity in Europe and America. Using contemporary photographs and illustrations of interiors, juxtaposed with modern photographs of individual pieces, it traces the stylistic evolution and dominant motifs of Deco. Patricia Bayer illustrates the triumph of the 1925 exhibition and the establishment of the pure high style of the leading Paris ensembliers, and assesses the tremendous growth of jazzy, Streamline Moderne offshoots in the United States. Major chapters are devoted to large-scale designs for ocean liners, cinemas, theaters, offices, and hotels, and to the revival in the 1970s and 1980s of Deco as a decorative style.

The Cambridge History of Modernism

This Cambridge History of Modernism identifies a coherent understanding of 'modernism' within the 'modern' period. In forty-three chapters, prominent scholars provide analytical narratives of literature, music, visual arts, architecture, philosophy, and science, extending the consideration across pan-European and transatlantic locations.

The A to Z of Architecture

Architecture, which can be understood in its most basic sense as a form of enclosure created with an aesthetic intent, first made its appearance in the Prehistoric Age. From its earliest developments, architecture changed over time and in different cultures in response to changing cultural needs, aesthetic interests, materials, and techniques. The A to Z of Architecture provides information on architects like Frank Lloyd Wright, Tadao Ando, Leon Battista Alberti, Filippo Brunelleschi, Michelangelo, and Konstantin Stepanovich Melnikov, as well as on famous structures like the Acropolis, the Colosseum, the Forbidden City, Machu Pichu, Notre Dame, the Pyramids of Giza, Stonehenge, and the World Trade Center. The dictionary examines the development of architecture over the centuries through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on the major architects, well-known buildings, time periods, styles, building types, and materials in world architecture.

Art Deco Britain

The definitive guide to Art Deco buildings in Britain. The perennially popular style of Art Deco influenced architecture and design all over the world in the 1920s and 1930s – from elegant Parisian theatres to glamorous Manhattan skyscrapers. The style was also adopted by British architects, but, until now, there has been little that really explains the what, where and how of Art Deco buildings in Britain. In Art Deco Britain, leading architecture historian and writer Elain Harwood, brings her trademark clarity and enthusiasm to the subject as she explores Britain's Art Deco buildings. Art Deco Britain, published in association with the Twentieth Century Society, is the definitive guide to the architectural style in Britain. The book begins with an overview of the international Art Deco style, and how this influenced building design in Britain. The buildings covered include Houses and Flats; Churches and Public Buildings; Offices; Hotels and Public Houses; Cinemas, Theatres and Concert Halls; and many more. The book covers some of the best-loved and some lesser-known buildings around the UK, such as the Midland Hotel in Morecambe, Eltham Palace, Broadcasting House and the Carreras Cigarette Factory in London. Beautifully produced and richly illustrated with architectural photography, this is the definitive guide to a much-loved architecture style.

Southern Vietnamese Modernist Architecture

"Southern Vietnamese Modernist Architecture" features beautiful architectural photography that illustrates the outstanding accomplishment of the people of southern Vietnam in developing a mid-century modernist architecture that is extraordinary in the world. Especially for Americans, Vietnam has been a war instead of a country. The world didn't notice that the Vietnamese were simultaneously constructing modern apartment buildings, houses, large public buildings, and public housing as they developed a

new nation. And the world didn't anticipate that this architecture would be so overtly modernist rather than an adaptation of traditional Vietnamese designs to the continuation of colonial architecture. In the mid-twentieth century, southern Vietnamese architects developed a version of modernist architecture that accommodated the tropical climate and reflected the identity of a newly-independent culture. It demonstrates the innate sense of design of Vietnamese and it represented the outlook of the people of southern Vietnam as they looked towards the future, even in the face of war. The vast quantity and quality of Vietnamese modernist buildings constructed throughout southern Vietnam made Vietnam an unrecognized center of modernism in the world. Most importantly, the southern Vietnamese as a culture embraced modernism, and it became the vernacular architecture of the culture for dwellings. This architecture features an interplay between masses and voids that provides a much more vibrant version of modernist architecture. This style fills the gaps between the functionalism of the International Style and the quest for identity and spirit that has been lacking in modernism worldwide. American architect Mel Schenck is a long-term immigrant to Vietnam and has been studying this architecture since he was surprised by the extent and quality of modernist architecture in Saigon when he first lived there in 1971/72. He and photographer Alexandre Garel accumulated a database of 400 buildings and 4,000 photographs in southern Vietnam to serve a comprehensive analysis of the history and characteristics of this distinctive architecture. Architectural historians, aficionados of modernist architecture, and anyone interested in Vietnamese culture will find that this book is a positive story about Vietnamese aspirations for independence and the value of modernist architecture in living in the world today.

Art Deco Chicago

An expansive take on American Art Deco that explores Chicago's pivotal role in developing the architecture, graphic design, and product design that came to define middle-class style in the twentieth century. Frank Lloyd Wright's lost Midway Gardens, the iconic Sunbeam Mixmaster, and Marshall Field's famed window displays: despite the differences in scale and medium, each belongs to the broad current of an Art Deco style that developed in Chicago in the first half of the twentieth century. This ambitious overview of the city's architectural, product, industrial, and graphic design between 1910 and 1950 offers a fresh perspective on a style that would come to represent the dominant mode of modernism for the American middle class. Lavishly illustrated with 325 images, the book narrates Art Deco's evolution in 101 key works, carefully curated and chronologically organized to tell the story of not just a style but a set of sensibilities. Critical essays from leading figures in the field discuss the ways in which Art Deco created an entire visual universe that extended to architecture, advertising, household objects, clothing, and even food design. Through this comprehensive approach to one of the 20th century's most pervasive modes of expression in America, Art Deco Chicago provides an essential overview of both this influential style and the metropolis that came to embody it.

Architectural Regionalism

In this rapidly globalizing world, any investigation of architecture inevitably leads to considerations of regionalism. But despite its omnipresence in contemporary practice and theory, architectural regionalism remains a fluid concept, its historical development and current influence largely undocumented. This comprehensive reader brings together over 40 key essays illustrating the full range of ideas embodied by the term. Authored by important critics, historians, and architects such as Kenneth Frampton, Lewis Mumford, Sigfried Giedion, and Alan Colquhoun, Architectural Regionalism represents the history of regionalist thinking in architecture from the early twentieth century to today.

Art Deco

Now available in a new format, this lavishly illustrated volume explores Art Deco art and design from its origin to its present day influences. The Art Deco style is so recognizable and widespread that its original impact on the culture in which it emerged has been all but lost in the clutter of imitation. This book draws our attention back to the birth of Art Deco—a period between two devastating world wars when industrialization was flourishing, interest in archaeology was peaking, and movements such as Cubism, Constructivism, Futurism, and Modernism were turning the art world on its head. Brilliantly designed to reflect the style it celebrates, Art Deco is filled with hundreds of examples of painting, architecture, interiors, jewelry, crafts, furniture, and fashion. Author Norbert Wolf traces the chronology of the Art Deco style by looking at the politics and culture of Europe in the 1920s and early 30s and the artistic movements that paralleled its popularity. He follows Art Deco's influence in Europe and its spread to the Americas and Asia. Most importantly, this wideranging volume looks beyond the era of

Art Deco's origination to the present day. Pointing to the numerous revivals and contemporary echoes in painting and even literature, this beautiful volume demonstrates the style's lasting importance.

Sydney Art Deco

First photographic reference book on Sydney's Art Deco architecture and lifestyle in the 1930s and 1940s containing contemporary and vintage images. The book covers commercial, residential, cinemas, pubs, civic and industrial buildings with Art Deco features.

Art Deco Architecture

This exploration of Art Deco architectural design embraces many different times and places in its visual and verbal account of the movement's origins, development, and influence.

Four Florida Moderns

A colorful survey explores the diverse styles of the arbiters of modernism in Florida. Alberto Alfonso, René González, Chad Oppenheim, and Guy Peterson—The Florida Four—are making a mark for themselves in contemporary architectural circles, infusing modernist traditions with their own flair. Practitioners of modernism in Florida—or, more accurately, tropical modernism—they are producing noteworthy works that display their commitment to distinctive regionalism. This book is the first to showcase their rich and varied repertoires. Each of the four architects has a unique take on modernism, resulting in four very different aesthetic approaches. From airports, medical facilities, and museums to open-air chapels, waterfront homes, and condominium complexes, their designs are fascinating for both their rootedness in modernist ideals and their dramatically different interpretations of it. More than 300 vibrant, full-color photographs offer a survey of work by each of the architects. At once a striking visual tour and a thoughtful examination, *Four Florida Moderns* treats readers to the rich and innovative styles of tropical modernism as conceived by four trailblazing architects.

Encyclopedia of Twentieth Century Architecture

"A balance of sophistication and clarity in the writing, authoritative entries, and strong cross-referencing that links architects and structures to entries on the history and theory of the profession make this an especially useful source on a century of the world's most notable architecture. The contents feature major architects, firms, and professional issues; buildings, styles, and sites; the architecture of cities and countries; critics and historians; construction, materials, and planning topics; schools, movements, and stylistic and theoretical terms. Entries include well-selected bibliographies and illustrations."—"Reference that rocks," *American Libraries*, May 2005.

Skyscraper Style

Designed for anyone with an interest in touring major architectural works, the Guidebooks contain historical and descriptive information on key buildings, and practical information including maps, directions, addresses, and references for further reading.

Claude Monet

A new edition of the most comprehensive survey of modern architecture in Africa to date. When the first edition of *African Modernism* was published in 2015, it was received with international praise and has been sought after constantly ever since it went out of print in 2018. Marking Park Books' 10th anniversary, this landmark book becomes available again in a new edition. In the 1950s and 1960s, most African countries gained independence from their respective colonial power. Architecture became one of the principal means by which the newly formed countries expressed their national identity. *African Modernism* investigates the close relationship between architecture and nation-building in Ghana, Senegal, Côte d'Ivoire, Kenya, and Zambia. It features one hundred buildings with brief descriptive texts, images, site plans, and selected floor plans and sections. The vast majority of images were newly taken by Iwan Baan and Alexia Webster for the book's first edition. Their photographs document the buildings in their present state. Each country is portrayed in an introductory text and a timeline of historic events. Further essays on postcolonial Africa and specific aspects and topics, also illustrated with images and documents, round out this outstanding volume.

The Havana Guide

This beautifully illustrated book is a celebration of Art Deco's expression through the graphic arts and illustration. Divided into three sections – the movement, its fashion and advertising – the reader gains great insight into the artists and innovators that helped popularize the Art Deco movement, such as Georges Barbier, Erté, Cassandre and Paul Colin. While the main focus for this intriguing book is centred on graphic art, numerous examples of other forms of Art Deco are also featured. Nestled among the posters and paintings, sculpture, objets d'art and jewellery assert their similarity, whether through line, form or theme. These echoes serve to show the creativity fertility of the period as styles and ideas traversed artistic media.

African Modernism

The Modernist house dissolved the closed spaces of the traditional home, overhauling the bathrooms and kitchens, opening the interior to natural light, and providing balconies and terraces. In *The Modernist Home*, art professor and curator Tim Benton examines its elements, from the technology that provided central heating and electric lighting, to new construction materials like concrete and steel, to features like winter gardens and folding furniture. He opens the door on Modernist houses around the world, including Le Corbusier's Villa Savoye and Kocher and Fry's Weekend House on Long Island, all fully illustrated with color photographs and plans.

Art Deco

An expertly written and exquisitely photographed study of the buildings of Victor Horta, a central figure of Art Nouveau whose work was fundamental to modernist architecture. In the decade following the success of his design for the Hôtel Tassel in Brussels in 1893, Victor Horta, the creator of Art Nouveau architecture, produced more than forty buildings—and a movement. Prepared in close collaboration with the Horta Museum, Brussels, *Victor Horta: The Architect of Art Nouveau* discusses the many influences on Horta's designs and his legacy. The richly ornamental style of Art Nouveau, characterized by fluid lines based on natural forms, expressed a desire to abandon the historical styles of the nineteenth century and to develop a language that was beautifully crafted and thoroughly contemporary, laying the foundations for the development of modernism in architecture and interior design. Detailed descriptions of nineteen projects representing the full range of Horta's work—including Edicule Lambeaux, Hôtel Autrique, Hôtel Max Hallet, and the Brugmann Hospital, are illustrated with Horta's original drawings and specially commissioned photographs by award-winning photographer Alastair Carew-Cox. Extensive photographs of Hôtel Solvay—to which access had been denied for twenty years before Carew-Cox was granted special access, in recognition of his and David Dernie's significant contribution to the study of Horta—are also included.

The Modernist Home

This second edition of *Historical Dictionary of Architecture* contains a chronology, an introduction, and an extensive bibliography. The dictionary section has over 400 cross-referenced entries on architects, famous structures, types of materials, and the different architectural styles.

Victor Horta

New York calls to mind many things: the Chrysler Building with its innovative design and sunburst pattern, the Empire State building with its amazing views and dominating size, Rockefeller Center seamlessly merging commerce and art. Each of these cherished pieces of New York were created during one of the city's most stylish and dazzling decades: the 1920s and 30s. *New York Deco* profiles this magnificent period of creativity in architecture when art deco thrived with its emphasis on machinetooled elegance and sleek lines. Many of the New York City landmarks were born of this age, as well as dozens of lesser-known office buildings and apartment houses. Together, they make the skyline of the Big Apple what it is today. Richard Berenholtz's "extraordinary" and "voluptuous" photographs have offered the best of New York in the large scale *New York New York* and *Panoramic New York* and now brilliantly highlight the finest examples of NYC's art deco architecture. Berenholtz's photography is accompanied by text from writers, artists, and personalities of the era, including F. Scott Fitzgerald, Dorothy Parker, Edna St. Vincent Millay, Ogden Nash, and Frank Lloyd Wright to create a wonderful celebration of the era. A perfect gift for the New Yorker and tourist alike, this gem of a book is a window into one of city's most divine periods. This new edition is deluxe in every way: it is 25% larger, has a cloth case with foil stamping encased in a cloth slipcase, also with foil stamping, and a

hand-tipped image, with shrinkwrapping. It contains six gatefolds not included in the original edition, bringing the new page count to 184 from 160 pages. Includes a limited edition print of the Chrysler Building, signed and numbered by the photographer. Limited to 5,000 copies.

Historical Dictionary of Architecture

Art Deco—the term conjures up jewels by Van Cleef & Arpels, glassware by Lalique, furniture by Ruhlmann—is best exemplified in the work shown at the exhibition that gave the style its name: the Exposition Internationale des Arts Décoratifs et Industriels Modernes, held in Paris in 1925. The exquisite craftsmanship and artistry of the objects displayed spoke to a sophisticated modernity yet were rooted in past traditions. Although it quickly spread to other countries, Art Deco found its most coherent expression in France, where a rich cultural heritage was embraced as the impetus for creating something new. The style drew on inspirations as diverse as fashion, avant-garde trends in the fine arts—such as Cubism and Fauvism—and a taste for the exotic, all of which converged in exceptionally luxurious and innovative objects. While the practice of Art Deco ended with the Second World War, interest in it has not only endured to the present day but has grown steadily. Based on the Metropolitan Museum's renowned collection French Art Deco presents more than eighty masterpieces by forty-two designers. Examples include Süe et Mare's furniture from the 1925 Exposition; Dufy's Cubist-inspired textiles; Dunand's lacquered bedroom suite; Dupas's monumental glass wall panels from the SS Normandie; and Fouquet's spectacular dress ornament in the shape of a Chinese mask. Jared Goss's engaging text includes a discussion of each object together with a biography of the designer who created it and is enlivened by generous quotations from writings of the period. The extensive introduction provides historical context and explores the origins and aesthetic of Art Deco. With its rich text and sumptuous photographs, this is not only one of the rare books on French Art Deco in English, but an object d'art in its own right.

New York Deco (Limited Edition)

He considered El Pedregal his most important project, and critics have described the houses and gardens there as a turning point in Mexican modern architecture."

French Art Deco

Dakota Sioux artist Mary Sully was the great-granddaughter of respected nineteenth-century portraitist Thomas Sully, who captured the personalities of America's first generation of celebrities (including the figure of Andrew Jackson immortalized on the twenty-dollar bill). Born on the Standing Rock reservation in South Dakota in 1896, she was largely self-taught. Steeped in the visual traditions of beadwork, quilling, and hide painting, she also engaged with the experiments in time, space, symbolism, and representation characteristic of early twentieth-century modernist art. And like her great-grandfather Sully was fascinated by celebrity: over two decades, she produced hundreds of colorful and dynamic abstract triptychs, a series of "personality prints" of American public figures like Amelia Earhart, Babe Ruth, and Gertrude Stein. Sully's position on the margins of the art world meant that her work was exhibited only a handful of times during her life. In *Becoming Mary Sully*, Philip J. Deloria reclaims that work from obscurity, exploring her stunning portfolio through the lenses of modernism, industrial design, Dakota women's aesthetics, mental health, ethnography and anthropology, primitivism, and the American Indian politics of the 1930s. Working in a complex territory oscillating between representation, symbolism, and abstraction, Sully evoked multiple and simultaneous perspectives of time and space. With an intimate yet sweeping style, Deloria recovers in Sully's work a move toward an anti-colonial aesthetic that claimed a critical role for Indigenous women in American Indian futures—within and distinct from American modernity and modernism.

Gardens of El Pedregal

Scholarly interest in Art Deco has grown rapidly over the past fifty years, spanning different academic disciplines. This volume provides a guide to the current state of the field of Art Deco research by highlighting past accomplishments and promising new directions. Chapters are presented in five sections based on key concepts: migration, public culture, fashion, politics, and Art Deco's afterlife in heritage restoration and new media. The book provides a range of perspectives on and approaches to these issues, as well as to the concept of Art Deco itself. It highlights the slipperiness of Art Deco yet points to its potential to shed new light on the complexities of modernity.

Becoming Mary Sully

A fresh look at a bold and dynamic 20th-century American art style Characterized by highly structured, geometric compositions with smooth surfaces, linear qualities, and lucid forms, Precisionism fully emerged after World War I and flourished in the 1920s and 1930s. This insightful publication, featuring more than 100 masterworks by artists such as Charles Sheeler, Georgia O'Keeffe, and Charles Demuth, sheds new light on the Precisionist aesthetic and the intellectual concerns, excitement, tensions, and ambivalences about industrialization that helped develop this important strand of early American modernism. Essays explore the origins of the style--which reconciled realism with abstraction and adapted European art movements like Purism, Cubism, and Futurism to American subject matter--as well as its relationship to photography, and the ways in which it reflected the economic and social changes brought about by industrialization and technology in the post-World War I world. In addition to making a meaningful contribution to the resurging interest in Modernism and its revisionist narratives, this book offers copious connections between the past and our present day, poised on the verge of a fourth industrial revolution. Fine Arts Museums of San Francisco in association with Yale University Press Exhibition Schedule: Fine Arts Museums of San Francisco, de Young (03/24/18-08/12/18) Dallas Museum of Art (09/16/18-01/06/19)

The Routledge Companion to Art Deco

A survey of 20th-century architecture, selecting significant moments and unravelling the attendant political, social and technological strands. The author not only describes buildings but also the evolution of design tools and their impact on architectural design.

Cult of the Machine

Essential reading for students and practitioners of urban design, this collection of essays introduces the 6 dimensions of urban design through a range of the most important classic and contemporary key texts. Urban design as a form of place making has become an increasingly significant area of academic endeavour, of public policy and professional practice. Compiled by the authors of the best selling Public Places Urban Spaces, this indispensable guide includes all the crucial definitions and various understandings of the subject, as well as a practical look at how to implement urban design that readers will need to refer to time and time again. Uniquely, the selections of essays that include the works of Gehl, Jacobs, and Cullen, are presented substantially in their original form, and the truly accessible dip-in-and-out format will enable readers to form a deeper, practical understanding of urban design.

A Modern Theory of Architecture

Modern Architectural Theory is the first book to provide a comprehensive survey of architectural theory, primarily in Europe and the United States, during three centuries of development. In this synthetic overview, Harry Mallgrave examines architectural discourse within its social and political context. He explores the philosophical and conceptual evolution of its ideas, discusses the relation of theory to the practice of building, and, most importantly, considers the words of the architects themselves, as they contentiously shaped Western architecture. He also examines the compelling currents of French

rationalist and British empiricist thought, radical reformation of the theory during the Enlightenment, the intellectual ambitions and historicist debates of the nineteenth century, and the distinctive varieties of modern theory in the twentieth century up to the profound social upheaval of the 1960s. Modern Architectural Theory challenges many assumptions about architectural modernism and uncovers many new dimensions of the debates about modernism.

A Modern Theory of Architecture

Architectural Theory of Modernism presents an overview of the discourse on function-form concepts from the beginnings, in the eighteenth century, to its peak in High Modernism. Functionalist thinking and its postmodern criticism during the second half of the twentieth century is explored, as well as today's functionalism in the context of systems theory, sustainability, digital design, and the information society. The book covers, among others, the theories of Carlo Lodoli, Gottfried Semper, Eugène-Emmanuel Viollet-le-Duc, Louis Sullivan, Frank Lloyd Wright, Hannes Meyer, Adolf Behne, CIAM, Jane Jacobs, Robert Venturi and Denise Scott Brown, Charles Jencks, William Mitchell, and Manuel Castells.

Modern Architectural Theory

In 1896, Otto Wagner's "Modern Architecture" shocked the European architectural community with its impassioned plea for an end to eclecticism and for a "modern" style suited to contemporary needs and ideals, utilizing the nascent constructional technologies and materials. Through the combined forces of his polemical, pedagogical, and professional efforts, this determined, newly appointed professor at the Vienna Academy of Fine Arts emerged in the late 1890s - along with such contemporaries as Charles Rennie Mackintosh in Glasgow and Louis Sullivan in Chicago - as one of the leaders of the revolution soon to be identified as the "Modern Movement." Wagner's historic manifesto is now presented in a new English translation - the first in almost ninety years - based on the expanded 1902 text and noting emendations made to the 1896, 1898, and 1914 editions. In his introduction, Dr. Harry Mallgrave examines Wagner's tract against the backdrop of nineteenth-century theory, critically exploring the affinities of Wagner's revolutionary élan with the German eclectic debate of the 1840s, the materialistic tendencies of the 1870s and 1880s, and the emerging cultural ideology of modernity. Modern Architecture is one of those rare works in the literature of architecture that not only proclaimed the dawning of a new era, but also perspicaciously and cogently shaped the issues and the course of its development; it defined less the personal aspirations of one individual and more the collective hopes and dreams of a generation facing the sanguine promise of a new century

Architectural Theory of Modernism

Exploring the related cultural forms of architecture and literature in the modern era

Modern Architecture

This essential compendium presents more than 150 key arguments by major architectural philosophers and gurus of today and outlines the numerous developments that have taken place in this field since the 1950s. Each of the statements is accompanied by a short biography of the architect and an extract from their principal texts drawn from a variety of sources.

Architecture and Modern Literature

"A Genealogy of Modern Architecture" is a reference work on modern architecture by Kenneth Frampton, one of today's leading architectural theorists. Conceived as a genealogy of twentieth century architecture from 1924 to 2000, it compiles some sixteen comparative analyses of canonical modern buildings ranging from exhibition pavilions and private houses to office buildings and various kinds of public institutions. The buildings are compared in terms of their hierarchical spatial order, circulation structure and referential details. The analyses are organized so as to show what is similar and different between two paired types, thus revealing how modern tradition has been diversely inflected. Richly illustrated, "A Genealogy of Modern Architecture" is a new standard work in architectural education.

Theories and Manifestoes of Contemporary Architecture

Published in 1923, *Toward an Architecture* had an immediate impact on architects throughout Europe and remains a foundational text for students and professionals. Le Corbusier urges readers to cease thinking of architecture as a matter of historical styles and instead open their eyes to the modern world.

Simultaneously a historian, critic, and prophet, he provocatively juxtaposes views of classical Greece and Renaissance Rome with images of airplanes, cars, and ocean liners. Le Corbusier's slogans--such as "the house is a machine for living in"--and philosophy changed how his contemporaries saw the relationship between architecture, technology, and history. This edition includes a new translation of the original text, a scholarly introduction, and background notes that illuminate the text and illustrations.

Genealogy of Modern Architecture

What is more important in architectural works—their form, shape, and color, or the meanings and symbolism that can be associated with them? Can aesthetic judgments of architecture be independent of the stories one can tell about buildings? Do non-architects perceive buildings in the same way as do architects? For the greater part of the twentieth century it was common to respond to these and similar questions by relying on psychological theories asserting there is no innocent eye, that we think only in language, and that human visibility results from preexisting, conceptual knowledge. Dramatic breakthroughs in philosophy and psychology over the past two decades, however, have shown us that human visibility functions for the most part independently of conceptual thinking and language. This book examines the ways in which new theories of human visibility create a different understanding of architectural design, practice, and education. This new understanding coincides with and supports formalist approaches to architecture that have become influential in recent years as a result of the digital revolution in architectural design.

Toward an Architecture

More than a decade in the making, this is a textbook of architecture, useful for every architect: from first-year students, to those taking senior design studio, to graduate students writing a Ph.D. dissertation in architectural theory, to experienced practicing architects. It is very carefully written so that it can be read even by the beginning architecture student. The information contained here is a veritable gold mine of design techniques. This book teaches the reader how to design by adapting to human needs and sensibilities, yet independently of any particular style. Here is a unification of genuine architectural knowledge that brings a new clarity to the discipline. It explains much of what people instinctively know about architecture, and puts that knowledge for the first time in a concise, understandable form. Dr. Salingaros has experience in the organization of the built environment that few practicing architects have. The later chapters of this new book touch on very sensitive topics: what drives architects to produce the forms they build; and why architects use only a very restricted visual vocabulary. Is it personal inventiveness, or is it something more, which perhaps they are not even aware of? There has not been such a book treating the very essence of architecture. The only other author who is capable of raising a similar degree of passion (and controversy) is Christopher Alexander, who happens to be Dr. Salingaros' friend and architectural mentor. "Surely no voice is more thought-provoking than that of this intriguing, perhaps historically important, new thinker?" From the Preface by His Royal Highness, Charles, The Prince of Wales "A New Vitruvius for 21st-Century Architecture and Urbanism?" Dr. Ashraf Salama Chair, Department of Architecture and Urban Planning, Qatar University, Doha, Qatar "Architecture, Salingaros argues, is governed by universal and intuitively understood principles, which have been exemplified by all successful styles and in all civilizations that have left a record of themselves in their buildings. The solution is not to return to the classical styles... the solution is to return to first principles and build within their constraints..." Dr. Roger Scruton Philosopher, London, UK "A fundamental text, among the most significant of the past several years." Dr. Vilma Torselli Architect and Author, Milan, Italy "A Theory of Architecture demonstrates how mathematics and the social sciences offer keys to designing a humane architecture. In this brilliant tome Salingaros explains why many modern buildings are neither beautiful nor harmonious and, alternatively, how architects and patrons can employ scale, materials and mathematical logic to design structures which are exciting, nourishing, and visually delightful." Duncan G. Stroik Professor of Architecture, University of Notre Dame, Indiana "Salingaros explores ways to clarify and formalize our understanding of aesthetic forms in the built environment, using mathematics, thermodynamics, Darwinism, complexity theory and cognitive sciences. Salingaros' remarkable observations suggest that concepts of complexity and scale can someday provide a full-bodied explanation for both the practice and the appreciation of architecture." Kim Sorvig Architecture & Planning, University of New Mexico See this book's Wikipedia entry http://en.wikipedia.org/wiki/A_Theory_of_Architecture Nikos A. Salingaros is an internationally known urbanist and architectural theorist who has studied the scientific bases underlying architecture for thirty years. Utne Reader ranked him as "One of 50 visionaries who are changing your world", and

Planetizen as 11th among "The top 100 urban thinkers of all time". He is Professor of Mathematics at the University of Texas at San Antonio.

Visuality for Architects

It is a major challenge to write the history of post-WWII architectural theory without boiling it down to a few defining paradigms. An impressive anthologising effort during the 1990s charted architectural theory mostly via the various theoretical frameworks employed, such as critical theory, critical regionalism, deconstructivism, and pragmatism. Yet the intellectual contours of what constitutes architectural theory have been constantly in flux. It is therefore paramount to ask what kind of knowledge has become important in the recent history of architectural theory and how the resulting figure of knowledge sets the conditions for the actual arguments made. The contributions in this volume focus on institutional, geographical, rhetorical, and other conditioning factors. They thus screen the unspoken rules of engagement that postwar architectural theory ascribed to.

A Theory of Architecture

Since its first appearance in 1981, critical regionalism has enjoyed a celebrated worldwide reception. The 1990s increased its pertinence as an architectural theory that defends the cultural identity of a place resisting the homogenising onslaught of globalisation. Today, its main principles (such as acknowledging the climate, history, materials, culture and topography of a specific place) are integrated in architects' education across the globe. But at the same time, the richer cross-cultural history of critical regionalism has been reduced to schematic juxtapositions of 'the global' with 'the local'. Retrieving both the globalising branches and the overlooked cross-cultural roots of critical regionalism, *Resisting Postmodern Architecture* resituates critical regionalism within the wider framework of debates around postmodern architecture, the diverse contexts from which it emerged, and the cultural media complex that conditioned its reception. In so doing, it explores the intersection of three areas of growing historical and theoretical interest: postmodernism, critical regionalism and globalisation. Based on more than 50 interviews and previously unpublished archival material from six countries, the book transgresses existing barriers to integrate sources in other languages into anglophone architectural scholarship. In so doing, it shows how the 'periphery' was not just a passive recipient, but also an active generator of architectural theory and practice. Stylianos Giamarellos challenges long-held 'central' notions of supposedly 'international' discourses of the recent past, and outlines critical regionalism as an unfinished project apposite for the 21st century on the fronts of architectural theory, history and historiography.

The Figure of Knowledge

This book presents a new take on the evolution of digital design theories in architecture from modernity to today, as they have been inspired both by contemporary philosophy and the emergence and access to advanced computation. It focuses on how concepts of difference in philosophy transformed architectural design theory and takes on even more significance with the introduction and ubiquitous use of computers within the discipline, changing the architectural design paradigm forever. Beginning with a presentation of American Pragmatism's push towards process, the book continues on to Husserl's influence on the modern movement, mid-century phenomenology, post-structuralist Derridean exchanges with architects, the Deleuzian influence on the smoothing of form and finally contemporary architectural references to speculative realism. Analyzing the arc of design theory as influenced by philosophical and computational logics, this book presents the transformation to contemporary design approaches that includes more biology, more data and more information, moving from "less is more" to "From Less to More!" *Philosophical Difference and Advanced Computation in Architectural Theory* is an influential read for students and academics of architectural theory, computational design and related areas.

Resisting Postmodern Architecture

This book presents for the first time in English an overview of the theoretical debates on architecture in nineteenth-century Austria and Germany. Drawing on a vast number of writings by architects, historians, philosophers and critics, Mitchell Schwarzer offers an exhaustive history of the principal debates on style, industry, nationalism, iron technology, and artistic expression, all of which inform modern architecture. He argues that the history of architecture in the modern era cannot be explained according to the simple evolution or progression of structural, functional, or artistic forces. Rather, he establishes modernity as a series of debates on the parameters of architectural knowledge itself and the identity

of the architectural profession in a rapidly industrialising world. Describing theory through its conflicts and unresolved questions, Schwarzer uncovers the complex nature of modern pluralism, one that is still relevant in the late twentieth century.

Philosophical Difference and Advanced Computation in Architectural Theory

FIRST ENGLISH-LANGUAGE PUBLICATION OF PETER EISENMAN'S 1963 DISSERTATION

German Architectural Theory and the Search for Modern Identity

Building Ideas An Introduction to Architectural Theory This book is an essential text for students of architecture and related disciplines, satisfying the demand for an accessible introduction to the major theoretical debates in contemporary architecture. Written in a lucid and user-friendly style, the book also acts as a guide and companion volume to the many primary theoretical texts recently made available in reprinted collections. Whilst architectural monographs, collections of building precedents and polemical manifestoes are growing more and more numerous, *Building Ideas* is the first book to provide an introduction to such a broad range of issues in architectural theory. This text therefore serves to fill a widening gap between the everyday practice of architecture and the often bewildering field of academic theoretical debate. Beginning with a general introduction to the field of architectural theory, covering the interface between philosophy and technology in the production and interpretation of buildings, the book presents the major theoretical positions in contemporary architecture through a series of thematically structured chapters. Each chapter deals with a specific approach to the theory and criticism of architecture by presenting a series of related buildings as illustrations of a key theoretical position, as well as setting this position in a cultural and historical context. Under the five broad headings of 'Architecture as Engineering - The Technological Revolution', 'Architecture as Art - Aesthetics in Philosophy', 'The Return of the Body - Phenomenology in Architecture', 'Systems of Communication - Structuralism and Semiotics' and 'Politics and Architecture - The Marxist Tradition', the book presents a wide but critical survey of the central questions in the current theoretical debate. Providing the theoretical tools necessary for an understanding of the history of philosophies and technologies in architecture, this book is essential reading for undergraduate architectural theory courses as well as a first point of reference for anyone wishing to understand the complex connections between architecture and related fields of cultural enquiry.

The Formal Basis of Modern Architecture

This important book, which won the 1984 Alice Davis Hitchcock Award, traces the process by which the mystical and numerological grounds for the use of number and geometry in building gave way to the more functional and technical ones that prevail in architectural theory and practice today. Between the late Renaissance and the early nineteenth century, the ancient arts of architecture were being profoundly transformed by the scientific revolution. This important book, which won the 1984 Alice Davis Hitchcock Award, traces the process by which the mystical and numerological grounds for the use of number and geometry in building gave way to the more functional and technical ones that prevail in architectural theory and practice today. Throughout, it relates the major architectural treatises of successive generations to the larger culture and the writings of philosophers, mathematicians, scientists, and engineers. The book leads the reader through the controversy that was generated by Claude Perrault in the seventeenth century. His writings began to cast doubt on the absolute aesthetic value of the classical orders and the "perfect" proportions that were architecture's legacy from Pythagorean times. Thus the once immutable "invisible" system lost its special status forever. The book focuses in particular on eighteenth-century developments in the science of mechanics and emerging techniques in structural analysis which slowly entered the architectural treatises and found their way into practice, often by way of civil and military engineers. And by the nineteenth century, the book notes, even architectural rendering and drawing were radically changed through the introduction of new descriptive and projective geometries. Tracing these fundamental changes in architectural intentions, Pérez-Gómez challenges many popular misconceptions about the theory and history of modern architecture. At the same time, he suggests an intangible loss, that of a culture's power to express through a building its total mathematical, mystical, and magical world-view.

Building Ideas

Theorizing a New Agenda for Architecture: An Anthology of Architectural Theory collects in a single volume the most significant essays on architectural theory of the last thirty years. A dynamic period of

reexamination of the discipline, the postmodern era produced widely divergent and radical viewpoints on issues of making, meaning, history, and the city. Among the paradigms presented are architectural postmodernism, phenomenology, semiotics, poststructuralism, deconstruction, and feminism. By gathering these influential articles from a vast array of books and journals into a comprehensive anthology, Kate Nesbitt has created a resource of great value. Indispensable to professors and students of architecture and architectural theory, *Theorizing a New Agenda* also serves practitioners and the general public, as Nesbitt provides an overview, a thematic structure, and a critical introduction to each essay. The list of authors in *Theorizing a New Agenda* reads like a "Who's Who" of contemporary architectural thought: Tadao Ando, Giulio Carlo Argan, Alan Colquhoun, Jacques Derrida, Peter Eisenman, Marco Frascari, Kenneth Frampton, Diane Ghirardo, Vittorio Gregotti, Karsten Harries, Rem Koolhaas, Christian Norberg-Schulz, Aldo Rossi, Colin Rowe, Thomas Schumacher, Ignasi de Sol-Morales Rubi, Bernard Tschumi, Robert Venturi and Denise Scott Brown, and Anthony Vidler. A bibliography and notes on all the contributors are also included.

Architecture and the Crisis of Modern Science

Architectural Theory: Vitruvius to 1870 is a landmark anthology that surveys the development of the field of architecture from its earliest days to the year 1870. The first truly comprehensive anthology that brings together the classic essays in the field, the volume chronicles the major developments and trends in architecture from Vitruvius to Gottfried Semper. Volume 1 of the first overview of architectural thought from antiquity to the present day; this volume covers 25 B.C. to 1870. Collects over 200 classic essays in the field, organized thematically for the student and scholar, covering Classicism, Neoclassicism, the Enlightenment, Romanticism, and the Gothic. Includes German, French, and Italian essays appearing in English here for the first time. Features a general introduction and headnotes to each essay written by a renowned expert on architectural theory.

Theorizing a New Agenda for Architecture:

Through a series of close readings of two major figures of the modern movement, Adolf Loos and Le Corbusier, Beatriz Colomina argues that architecture only becomes modern in its engagement with the mass media, and that in so doing it radically displaces the traditional sense of space and subjectivity. *Privacy and Publicity* boldly questions certain ideological assumptions underlying the received view of modern architecture and reconsiders the methodology of architectural criticism itself. Where conventional criticism portrays modern architecture as a high artistic practice in opposition to mass culture, Colomina sees the emerging systems of communication that have come to define twentieth-century culture—the mass media—as the true site within which modern architecture was produced. She considers architectural discourse as the intersection of a number of systems of representation such as drawings, models, photographs, books, films, and advertisements. This does not mean abandoning the architectural object, the building, but rather looking at it in a different way. The building is understood here in the same way as all the media that frame it, as a mechanism of representation in its own right. With modernity, the site of architectural production literally moved from the street into photographs, films, publications, and exhibitions—a displacement that presupposes a new sense of space, one defined by images rather than walls. This age of publicity corresponds to a transformation in the status of the private, Colomina argues; modernity is actually the publicity of the private. Modern architecture renegotiates the traditional relationship between public and private in a way that profoundly alters the experience of space. In a fascinating intellectual journey, Colomina tracks this shift through the modern incarnations of the archive, the city, fashion, war, sexuality, advertising, the window, and the museum, finally concentrating on the domestic interior that constructs the modern subject it appears merely to house.

The Other Tradition of Modern Architecture

Covering the period 1890 - 1932 this book focuses on various recognised masters explaining the detailing and construction techniques used in their buildings.

Architectural Theory

More than a decade in the making, this is a textbook of architecture, useful for every architect: from first-year students, to those taking senior design studio, to graduate students writing a Ph.D. dissertation in architectural theory, to experienced practicing architects. It is very carefully written so that it can be read even by the beginning architecture student. The information contained here is a veritable gold

mine of design techniques. This book teaches the reader how to design by adapting to human needs and sensibilities, yet independently of any particular style. Here is a unification of genuine architectural knowledge that brings a new clarity to the discipline. It explains much of what people instinctively know about architecture, and puts that knowledge for the first time in a concise, understandable form.

Privacy and Publicity

Foreword by Arthur Drexler. Introduction by Vincent Scully.

The Details of Modern Architecture

In this book, Tsiambaos redefines the ground-breaking theory of Greek architect and town planner Constantinos A. Doxiadis (*The Form of Space in Ancient Greece*) and moves his thesis away from antiquity and ancient architecture, instead arguing that it can only be understood as a theory founded in modernity. In light of this, the author explores Doxiadis' theory in relation to the work of the controversial Greek architect Dimitris Pikionis. This parallel investigation of the philosophical content of Doxiadis' theory and the design principles of Pikionis' work establishes a new frame of reference and creates a valuable and original interpretation of their work. Using innovative cross-disciplinary tools and methods which expand the historical boundaries of interwar modernism, the book restructures the ground of an alternative modernity that looks towards the future through a mirror that reflects the ancient past. *From Doxiadis' Theory to Pikionis' Work: Reflections of Antiquity in Modern Architecture* is fascinating reading for all scholars and students with an interest in modernism and antiquity, the history and theory of architecture, the history of ideas and aesthetics or town planning theory and design.

A Theory of Architecture

A sharp and lively text that covers issues in depth but not to the point that they become inaccessible to beginning students, *An Introduction to Architectural Theory* is the first narrative history of this period, charting the veritable revolution in architectural thinking that has taken place, as well as the implications of this intellectual upheaval. The first comprehensive and critical history of architectural theory over the last fifty years surveys the intellectual history of architecture since 1968, including criticisms of high modernism, the rise of postmodern and poststructural theory, critical regionalism and tectonics. Offers a comprehensive overview of the significant changes that architectural thinking has undergone in the past fifteen years. Includes an analysis of where architecture stands and where it will likely move in the coming years.

Complexity and Contradiction in Architecture

When *Morality and Architecture* was first published in 1977, it received passionate praise and equally passionate criticism. An editorial in *Apollo*, entitled "The Time Bomb," claimed that "it deserved to become a set book in art school and University art history departments," and the *Times Literary Supplement* savaged it as an example of "that kind of vindictiveness of which only Christians seem capable." Here, for the first time, is the story of the book's impact. In writing his groundbreaking polemic, David Watkin had taken on the entire modernist establishment, tracing it back to Pugin, Viollet-le-Duc, Corbusier, and others who claimed that their chosen style had to be truthful and rational, reflecting society's needs. Any critic of this style was considered antisocial and immoral. Only covertly did the giants of the architectural establishment support the author. Watkin gives an overview of what has happened since the book's publication, arguing that many of the old fallacies still persist. This return to the attack is a revelation for anyone concerned architecture's past and future.

From Doxiadis' Theory to Pikionis' Work

Sylvia Lavin uncovers the origins of one of the fundamental concepts of modern architectural theory, the idea that architecture is a form of language.

The Unromantic Castle and Other Essays

This second volume of the landmark *Architectural Theory* anthology surveys the development of architectural theory from the Franco-Prussian war of 1871 until the end of the twentieth century. The entire two volume anthology follows the full range of architectural literature from classical times to present transformations. An ambitious anthology bringing together over 300 classic and contemporary essays that survey the key developments and trends in architecture. Spans the period from 1871 to

2005, from John Ruskin and the arts and crafts movement in Great Britain through to the development of Lingang New City, and the creation of a metropolis in the East China sea. Organized thematically, featuring general and section introductions and headnotes to each essay written by a renowned expert on architectural theory. Places the work of "starchitects" like Koolhaas, Eisenman, and Lynn alongside the work of prominent architectural critics, offering a balanced perspective on current debates. Includes many hard-to-find texts and works never previously translated into English. Alongside Volume I: An Anthology from Vitruvius to 1870, creates a stunning overview of architectural theory from early antiquity to the twenty-first century.

An Introduction to Architectural Theory

As the first comprehensive encyclopedic survey of Western architectural theory from Vitruvius to the present, this book is an essential resource for architects, students, teachers, historians, and theorists. Using only original sources, Krutft has undertaken the monumental task of researching, organizing, and analyzing the significant statements put forth by architectural theorists over the last two thousand years. The result is a text that is authoritative and complete, easy to read without being reductive.

Morality and Architecture Revisited

A history of the influence of communication technologies on Western architectural theory. The discipline of architecture depends on the transmission in space and time of accumulated experiences, concepts, rules, and models. From the invention of the alphabet to the development of ASCII code for electronic communication, the process of recording and transmitting this body of knowledge has reflected the dominant information technologies of each period. In this book Mario Carpo discusses the communications media used by Western architects, from classical antiquity to modern classicism, showing how each medium related to specific forms of architectural thinking. Carpo highlights the significance of the invention of movable type and mechanically reproduced images. He argues that Renaissance architectural theory, particularly the system of the five architectural orders, was consciously developed in response to the formats and potential of the new printed media. Carpo contrasts architecture in the age of printing with what preceded it: Vitruvian theory and the manuscript format, oral transmission in the Middle Ages, and the fifteenth-century transition from script to print. He also suggests that the basic principles of "typographic" architecture thrived in the Western world as long as print remained our main information technology. The shift from printed to digital representations, he points out, will again alter the course of architecture.

Quatremere de Quincy

Pioneering manifesto by founder of "International School." Technical and aesthetic theories, views of industry, economics, relation of form to function, "mass-production split," and much more. Profusely illustrated.

Architectural Theory

"Offers an intense scholarly experience in its comprehensiveness, its variety of voices and its formal organization... the editors took a risk, experimented and have delivered a much-needed resource that upends the status-quo." - Architectural Histories, journal of the European Architectural History Network "Architectural theory interweaves interdisciplinary understandings with different practices, intentions and ways of knowing. This handbook provides a lucid and comprehensive introduction to this challenging and shifting terrain, and will be of great interest to students, academics and practitioners alike." - Professor Iain Borden, UCL Bartlett School of Architecture "In this collection, architectural theory expands outward to interact with adjacent discourses such as sustainability, conservation, spatial practices, virtual technologies, and more. We have in The Handbook of Architectural Theory an example of the extreme generosity of architectural theory. It is a volume that designers and scholars of many stripes will welcome." - K. Michael Hays, Eliot Noyes Professor of Architectural Theory, Harvard University The SAGE Handbook of Architectural Theory documents and builds upon the most innovative developments in architectural theory over the last two decades. Bringing into dialogue a range of geographically, institutionally and historically competing positions, it examines and explores parallel debates in related fields. The book is divided into eight sections: Power/Difference/Embodiment Aesthetics/Pleasure/Excess Nation/World/Spectacle History/Memory/Tradition Design/Production/Practice Science/Technology/Virtuality Nature/Ecology/Sustainability City/Metropolis/Territory. Creating openings for future lines of inquiry and establishing the basis for new directions for education,

research and practice, the book is organized around specific case studies to provide a critical, interpretive and speculative enquiry into the relevant debates in architectural theory.

History of Architectural Theory

A study of the complex relationship between technological development and the conceptual basis of architectural design, from World War II to early 1990s. In *Tower and Office*, Spanish architects Inaki Abalos and Juan Herreros look at the role and impact of advanced building technologies in American architecture since World War II. The war, they claim, marked the end of the first cycle of modernism, challenging the belief that technological progress alone could produce a perpetually better future. At the same time, the war was the source of powerful new structural models and construction methods. The authors examine the ways these technologies have been inflected over the last half century by more subjective and integrated processes of spatial organization. In the first part of the book, Abalos and Herreros focus on the work of Le Corbusier, revealing the degree of complexity achieved in his interpretation of the modern skyscraper. In the second part, they look at the intersection of technical and cultural determinants in the design of high-rise structures since World War II. Among the issues they consider are the evolution of the load-bearing frame, the impact of high-tech systems on tall buildings, and the transparent building skin. In the third part, they address developments in office design and planning, tracing an evolution from the repetitive and homogeneous office skyscraper to the present-day mixed-use structure. Overall they demonstrate how the objective technical analysis associated with modernist architectural theory has given way in recent building practice to a variety of flexible, pragmatic, and environmental approaches. These, they suggest, have opened the way to new urban and architectural forms.

Architecture in the Age of Printing

This book looks at architecture history in reverse, in order to follow chains of precedents back through time to see how ideas alter the course of civilization in general and the discipline of architecture in particular. Part I begins with present-day attitudes about architecture and traces them back to seminal ideas from the beginning of the twentieth century. Part II examines how pre-twentieth-century societies designed and understood architecture, how they strove to create communal physical languages, and how their disagreements set the stage for our information age practices. *Architecture History and Theory in Reverse* includes 45 black-and-white images and will be useful to students of architecture and literature.

Towards a New Architecture

Take a theoretical approach to architecture with *The Autopoiesis of Architecture*, which presents the topic as a discipline with its own unique logic. Architecture's conception of itself is addressed as well as its development within wider contemporary society. Author Patrik Schumacher offers innovative treatment that enriches architectural theory with a coordinated arsenal of concepts facilitating both detailed analysis and insightful comparisons with other domains, such as art, science and politics. He explores how the various modes of communication comprising architecture depend upon each other, combine, and form a unique subsystem of society that co-evolves with other important autopoietic subsystems like art, science, politics and the economy. The first of two volumes that together present a comprehensive account of architecture's autopoiesis, this book elaborates the theory of architecture's autopoiesis in 8 parts, 50 sections and 200 chapters. Each of the 50 sections poses a thesis drawing a central message from the insights articulated within the respective section. The 200 chapters are gathering and sorting the accumulated intelligence of the discipline according to the new conceptual framework adopted, in order to catalyze and elaborate the new formulations and insights that are then encapsulated in the theses. However, while the theoretical work in the text of the chapters relies on the rigorous build up of a new theoretical language, the theses are written in ordinary language with the theoretical concepts placed in brackets. The full list of the 50 theses affords a convenient summary printed as appendix at the end of the book. The second volume completes the analysis of the discourse and further proposes a new agenda for contemporary architecture in response to the challenges and opportunities that confront architectural design within the context of current societal and technological developments.

The SAGE Handbook of Architectural Theory

Gottfried Semper was the most important German theorist of the nineteenth century. From his first published essay on Greek polychromy in 1834 to his final lecture on the origin of architectural styles in 1869, Semper persistently endeavoured to fashion a comprehensive architectural theory explaining the meaning and transformational nature of architectural form. The breadth and richness of his ideas, both applauded and opposed at the turn of the twentieth century, proved enormously influential in the development of modern theory. Originally published in 1989, this book provides an English translation of a number of Semper's published writings. The introduction seeks to trace the course of Semper's theoretical development over thirty-five years. Semper's ideas, like those of his contemporaries, John Ruskin and Eugene Viollet-le-Duc, had enormous influence on the genesis of modern architectural theory and will appeal to both architectural historians and architects.

Tower and Office

This collection of previously unpublished essays from a diverse range of well-known scholars and architects builds on the architectural tradition of phenomenological hermeneutics as developed by Dalibor Vesely and Joseph Rykwert and carried on by David Leatherbarrow, Peter Carl and Alberto Pérez-Gómez. Taking an interdisciplinary approach and drawing on ideas from beyond the architectural canon, contributors including Kenneth Frampton, David Leatherbarrow, Juhani Pallasmaa, Karsten Harries, Steven Holl, Indra Kagis McEwen, Paul Emmons, and Louise Pelletier offer new insights and perspectives on questions such as the following: Given the recent fascination with all things digital and novel, what is the role of history and theory in contemporary architectural praxis? Is authentic meaning possible in a technological environment that is so global and interconnected? What is the nature and role of the architect in our shared modern world? How can these questions inform a new model of architectural praxis? *Architecture's Appeal* is a thought-provoking book which will inspire further scholarly inquiry and act as a basis for discussion in the wider field as well as graduate seminars in architectural theory and history.

Architecture History and Theory in Reverse

The Autopoiesis of Architecture, Volume I
