Oracle Hyperion Financial Management 11 Essentials These questions are similar to the ones asked in the actual Test. How should I know? I know, because although I have been working as a Hyperion Consultant for many years, I have myself recently certified with the latest version of the Certification test. Before you start here are some Key features of the Certification Exam. This certification exam verifies that the candidate has the knowledge required in the area of Hyperion Financial Management This certificate builds on basic consultant skills and experience that is then refined by practical experience during several projects. The certification covers skills such as: creating applications using and EPMA and via the classic method, loading data, defining rules, working with shared services and defining

reports. The exam targets the intermediate-level implementation team member. The exam is Computer based and you have 105 minutes to answer 60 Questions. The Questions are (mostly) multiple choice type and there is NO penalty for an incorrect answer. Some of the Questions have more than one correct answer. You must get ALL the options correct for you to be awarded points. For questions with a single answer, the answers will have a button next to them. You will be able to select only one button. For questions with multiple answers, the answers will have a 'tick box' next to them. This allows you to select multiple answers. You are not allowed to use any reference materials during the certification test (no access to online documentation or to any Oracle system). Clearing the Certification will not automatically lead you to a job. However a Certification with some project experience will certainly open a lot of doors for you. So if you have little or no experience, you should get yourself certified, get some project experience, and then the whole of the Oracle World open for you to explore. Effective Financial Management

In a fast changing world, brimming with social and economic uncertainty, financial information plays a vital role in the life of an organization and does so with two sets of eyes. One set looks back to see what has happened. This is the accounting function, which is simply about the recording of events and the production of the financial reports that satisfy the stewardship responsibility of management. The other set looks forward to determine the most appropriate strategic direction for an organization, guiding managerial actions, motivating behaviors, and creating and supporting the cultural values necessary to achieve an organizations strategic objectives. This book is all about the second set of eyes, which are the lenses of STRATEGIC FINANCIAL MANAGEMENT, that help organizations plot their way through an environment filled with opportunities and dangers. For students, aspiring managers as well as those who already have management responsibilities this book provides an insight, through the eyes of the characters of a start-up company, of some of the ideas and models that help to identify the possible strategies capable of maximizing an organization's value, which is the same as making the owners as wealthy as possible, to determine how to finance the organization in the most proper way, to allocate the collected capital in the most effective way, to monitor the implementation of the chosen strategy to see whether it is meeting the planned objectives, and to reasonably decide on the reinvestment and distribution of profits.
