Leadership, has a **moral**, dimension because **leaders**, influence the lives of others. Because of this

influential dimension, **leadership**, ...

Intro

COMMON GOOD Hand in hand with the authority to make decisions is the obligation a leader has to use their authority for the common good.

POWER Because the leader usually has more power and control than followers have, leaders have to be particularly sensitive to how their leadership affects the well-being of others.

COMMON GOOD Put another way, ethical leadership is a process by which a good person rightly influences others to accomplish a common good: to make the world better, fairer, and more humane.

VALUES Ethics is concerned with the kind of values and morals an individual or society finds desirable or appropriate.

SIX DIMENSIONS A model for many of these programs was developed by the Josephson Institute in California, which frames instruction around six dimensions of character: trustworthiness, respect, responsibility, fairness, caring, and citizenship

CORE VALUES Based on these and similar character dimensions, schools are emphasizing the importance of character and how core values influence an individual's ethical decision making.

DEVELOPMENT Although character is clearly at the core of who you are as a person, it is also something you can learn to strengthen and develop. When practiced over time, good values become habitual.

GOALS Actions refer to the ways a leader goes about accomplishing goals. Ethical leaders use moral means to achieve their goals.

ACTIONS The actions a leader takes to accomplish a goal need to be ethical. They cannot be justified by the necessity or importance of the leader's goals. Ethical leadership involves using morally appropriate actions to achieve goals.

SERVING OTHERS Serving others is an example of altruism, an approach that suggests that actions are ethical if their primary purpose is to promote the best interest of others.

SHOWING JUSTICE Justice demands that a leader place the issue of fairness at the center of decision making. As a rule, no one should receive special treatment or special consideration except when a particular situation demands it.

GOLDEN RULE In addition, justice is concerned with the Golden Rule: Treat others as you would like to be treated. If you expect fair treatment from others, then you should treat others fairly.

RESOURCES Because of the real or perceived scarcity of resources, conflicts often occur between individuals about fair methods of distribution. It is important for a leader to establish clearly the rules for distributing rewards.

GOALS Leaders play a significant role in determining whether leadership is ethical. The goals a leader selects are a reflection of the leader's ethics.

VALUE Identifying and pursuing just and worthy goals are the most important steps an ethical leader will undertake. In choosing goals, an ethical leader must assess the relative value and worth of their goals.

COMMUNITY In the process, it is important for the leader to take into account the interests of others in the group or organization and, in some cases, the interests of the community and larger culture in which they work.

The challenge for a leader is to strike a balance between being open and candid and at the same time monitoring what is appropriate to disclose.

EFFECT CHANGE When they use their potential, they are using their power as a resource to effect change in others.

BASES OF POWER The most widely cited research on power is French and Raven's work on the bases of social power. They identified five common and important bases of power: referent power, expert power, legitimate power, reward power, and coercive power.

USING POWER Since power can be used in positive ways to benefit others or in destructive ways to hurt others, a leader needs to be aware of how they use power. Power is not inherently bad, but it can be used in negative ways.

PERSONAL ENDS There is a dark side of leadership where a leader uses their influence or power for personal ends. Unfortunately, there are many examples in the world of such leaders.

VALUES Values are the ideas, beliefs, and modes of action that people find worthwhile or desirable. Some examples of values are peace, justice, integrity, fairness, and community. A leader's ethical values are demonstrated in everyday leadership.

END VALUES End values describe the outcomes or goals a leader seeks to achieve. End values are present when a person addresses broad issues such as liberty and justice.

Different cultures have different rules of conduct, and as a result, leadership behaviors that one

culture deems ethical and another does not

The Third World and International Order

This collection of essays explores different dimensions of the relationship between the third world and international law. The topics covered include third world approaches to international law, non-state actors and developing countries, feminism and the third world, foreign investment, resistance and international law, and territorial disputes and native peoples. It is a further contribution to the work done by scholars intent on elaborating what might be termed Third World Approaches to International Law (TWAIL). This initiative seeks to continue and further develop the important work that has been done over many decades, particularly by scholars and jurists from the third world, to construct an international law which is sensitive to the needs of third world peoples. This body of scholarship has attempted to extend and expand the concerns and materials of international law. The essays in this volume are animated by these same motives at a time when unprecedented issues confront third world peoples, particularly since the contemporary international system appears to be disempowering third world peoples, intensifying inequality between the North and the South, and indeed, importantly, within the North and the South. TWAIL scholars attempt to look afresh at the history of colonial international law, engage previous trends in third world scholarship in international law, take cognizance of the dramatic changes which have characterized the body of international law in the last few decades from the perspective of third world peoples, record their resistance to unjust and oppressive international laws, and advance new approaches that address their needs and concerns. These are the broad themes and concerns which animate this collection of essays.

International Law from Below

The emergence of transnational social movements as major actors in international politics - as witnessed in Seattle in 1999 and elsewhere - has sent shockwaves through the international system. Many questions have arisen about the legitimacy, coherence and efficiency of the international order in the light of the challenges posed by social movements. This book offers a fundamental critique of twentieth-century international law from the perspective of Third World social movements. It examines in detail the growth of two key components of modern international law - international institutions and

human rights - in the context of changing historical patterns of Third World resistance. Using a historical and interdisciplinary approach, Rajagopal presents compelling evidence challenging debates on the evolution of norms and institutions, the meaning and nature of the Third World as well as the political economy of its involvement in the international system.

International Law and World Order

This book offers a critique of the principal contemporary approaches to international law alongside its own novel perspectives.

International Law and International Politics

This illuminating book explores a multitude of areas in which law and politics intersect on the international plane, providing a comprehensive analysis of the foundations on which both international law and politics rest. The book examines both disciplines' mutual interaction in more specific areas such as public authority, global space, and peace.

The Search for World Order

"In 1955 a conference was held in Bandung, Indonesia that was attended by representatives from twenty-nine developing nations. Against the backdrop of crumbling European colonies, Asian and African leaders forged a new alliance and established anti-imperial principles for a new world order. The conference captured the popular imagination across the Global South. Bandung's larger significance as counterpoint to the dominant world order was both an act of collective imagination and a practical political project for decolonization that inspired a range of social movements, diplomatic efforts, institutional experiments and heterodox visions of the history and future of the world. This book explores what the spirit of Bandung has meant to people across the world over the past decades and what it means today. Experts from a wide range of fields show how, despite the complicated legacy of the conference, international law was never the same after Bandung"--

Bandung, Global History, and International Law

In early modern Europe, international law emerged as a means of governing relations between rapidly consolidating sovereign states, purporting to establish a normative order for the perilous international world. However, it was intrinsically fragile and uncertain, for sovereign states had no acknowledged common authority that would create, change, apply, and enforce legal norms. In *Imagining World Order*, Chenxi Tang shows that international world order was as much a literary as a legal matter. To begin with, the poetic imagination contributed to the making of international law. As the discourse of international law coalesced, literary works from romances and tragedies to novels responded to its unfulfilled ambitions and inexorable failures, occasionally affirming it, often contesting it, always uncovering its problems and rehearsing imaginary solutions. Tang highlights the various modes in which literary texts—some highly canonical (Camões, Shakespeare, Corneille, Lohenstein, and Defoe, among many others), some largely forgotten yet worth rediscovering—engaged with legal thinking in the period from the sixteenth to the eighteenth century. In tracing such engagements, he offers a dual history of international law and European literature. As legal history, the book approaches the development of international law in this period—its so-called classical age—in terms of literary imagination. As literary history, Tang recounts how literature confronted the question of international world order and how, in the process, a set of literary forms common to major European languages (epic, tragedy, romance, novel) evolved.

Imagining World Order

Identifies the major weaknesses in the current United Nations system and proposes fundamental reforms to address each. This title is also available as Open Access.

Global Governance and the Emergence of Global Institutions for the 21st Century

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) *Global Trends 2040-A More Contested World* (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints

a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Global Trends 2040

This book is a study of the future of international law as well as the future of the United Nations. It is the first study ever bringing together the laws, policies and practices of the UN for the protection of the earth, the oceans, outer space, human rights, victims of armed conflicts and of humanitarian emergencies, the poor, the vulnerable and the disadvantaged world-wide. It reviews unprecedented dangers and challenges facing humanity such as climate change and weapons of mass destruction, and argues that the international law of the future must become an international law of security and of protection. It submits that the concept of international security in the UN Charter can no longer be restricted to situations of armed conflict but must be given its natural meaning: whatever threatens the security of humanity. It calls for the Security Council to perform its role as the guardian of the security of humankind and sees a leadership role for the UN Secretary-General in analysing and presenting challenges of international security and protection to the Security Council for its attention.

United Nations Protection of Humanity and Its Habitat

This volume maps models of early international legal thought from Machiavelli to Hegel

System, Order, and International Law

Exploring in depth the institutions that underpin the global economy, this study provides invaluable insights into why a minimum economic order has endured for so long and why states are unwilling to establish a maximum order, a global safety net for all. The author investigates how debt – a critical component of states' economic infrastructure – leads to debilitating crises, and how these crises undermine the economic autonomy and political independence of states.

The Global Economic Order

This book depicts the challenges associated with the emergence of a new global order in which patterns of conflict and the role of traditional military power are in the process of radical flux. Our ideas about global order have yet to catch up with these new behavioral trends, including the rise of non-state transnational political actors in the context of neoliberal globalization. In this historical setting the modern territorial sovereign state is confronted by multiple challenges ranging from climate change to mass migration to transnational political extremism. The existing global order seems currently overwhelmed by these challenges, resulting in widespread stress and chaos that is transforming global security in ways that endanger democratic governance. The future will be determined by whether the peoples of the world make their weight felt in support of sustainable global justice and overcome the impact of oppressive and exploitative patterns of corporate and state behavior. It is this problematic set of circumstances that *Power Shift* addresses.

Power Shift

Public international law concerns the growing body of international legal principles, norms and rules outside the coverage of private and conflict law. This guide includes primary and secondary sources of information in both general and specialized areas of public international law, as well as national "official" materials where appropriate. The book is divided into two parts, Part I referring to the evidentiary status of public international law materials and Part II embracing their substantive aspects. Annotation copyrighted by Book News, Inc., Portland, OR

Public International Law

Hunger, disease, poverty, environmental insecurity, illegitimate governance, civil war, and international conflict are only a few of the causes of today's global turmoil and gross human suffering. Written in

honour of Ivan Head, foreign affairs advisor to former Prime Minister Pierre Trudeau, past president of Canada's International Development Research Centre, and professor emeritus of International law at the University of British Columbia, this collection of distinguished essays addresses the imperative to enhance human dignity and protect human life by humanizing our global order and improving international relations - goals Professor Head strove for throughout his career. The authors argue that the search for possible solutions to these challenges, which has so far tended to proceed without due recognition of the needs, demands, and solutions that emanate from the geo-political South, must in future be conducted with alternate visions that take these factors into account. Each essay seeks to re-assess and re-imagine a specific topic that relates in some significant way to our current global circumstance in ways that advance the book's thematic. With essays grappling with such issues as Multilateral Environmental Agreements, the Use of Force, the Prevention of Civil War through Minority Protection, Common Heritage of Humankind, and the Civil Dimensions of Strategy, the volume deals with a range of diverse topics that are as crucial as they are topical.

Humanizing Our Global Order

The law governing the international claims of dual nationals relates to, and is influenced by, the wider subject of the individual's standing at the international level. But while the latter had, as a result of modern trends in human rights, hugely improved as from the middle of the last century, no occasion to test its impact on such claims had arisen prior to the 1980s, when the Iran-United States Claims Tribunal - justifiably described as the most influential arbitral institution in the history of international adjudication - first became involved with the issue. The significance of the Tribunal's jurisprudence on the subject is not, however, limited to the judicial support it gives to the international rights of the individual. Having made its basic findings of law on the subject, the Tribunal has proceeded to apply them, for some twenty years, to a host of Cases of widely different characters. The result is a wealth of material - comprehensively reviewed in this book for the first time - which is likely to be of some benefit to those interested in this area of international law.

Claims of Dual Nationals and the Development of Customary International Law

Events: The Force of International Law presents an analysis of international law, centred upon those historical and recent events in which international law has exerted, or acquired, its force. From Spanish colonization and the Peace of Westphalia, through the release of Nelson Mandela and the Rwandan genocide, and to recent international trade negotiations and the 'torture memos', each chapter in this book focuses on a specific international legal event. Short and accessible to the non-specialist reader, these chapters consider what forces are put into play when international law is invoked, as it is so frequently today, by lawyers, laypeople, or leaders. At the same time, they also reflect on what is entailed in naming these 'events' of international law and how international law grapples with their disruptive potential. Engaging economic, military, cultural, political, philosophical and technical fields, Events: The Force of International Law will be of interest to international lawyers and scholars of international relations, legal history, diplomatic history, war and/or peace studies, and legal theory. It is also intended to be read and appreciated by anyone familiar with appeals to international law from the general media, and curious about the limits and possibilities occasioned, or the forces mobilised, by that appeal.

Events: The Force of International Law

This book deals with the transformation of the international legal system into a new world order. Looking at concepts and principles, processes and emerging problems, it examines the impact of global forces on international law. In so doing, it identifies a unified set of legal rules and processes from the great variety of state practice and jurisprudence. The work develops a new framework to examine the key elements of the global legal system, termed the 'four pillars of global law': verticalization, legality, integration and collective guarantees. The study provides an in-depth analysis of the differences between traditional international law and the new principles and processes along which the universal society and world power are organized and how this is related to domestic power. The book addresses important changes in key legal issues; it reconstructs a complex legal framework, and the emergence of a new international order that has still not been studied in depth, providing a compass that will prove a useful resource for students, researchers and policy makers within the field of law and with an interest in international relations.

The Pillars of Global Law

The ABA Journal serves the legal profession. Qualified recipients are lawyers and judges, law students, law librarians and associate members of the American Bar Association.

ABA Journal

Decisions of the International Law Commission during its fiftieth session (1998) as regards the following topics: State responsibility; unilateral acts of States; nationality in relation to the succession of States; prevention of transboundary damage from hazardous activities; diplomatic protection; reservations to treaties and long-term programme of work of the Commission.

Yearbook of the International Law Commission 1999, Vol.II, Part 1

This volume offers a many-sided introduction to the theme of Christianity and international law. Using a historical and contemporary perspective, it will appeal to readers interested in key topics of international law and how they intersect with Christianity.

Christianity and International Law

What is the relationship between politics and international law? Inspired by comparative politics and socio-legal studies, this Research Handbook develops a novel framework for comparative analysis of politics and international law at different stages of governance and in different governance systems. It applies the framework in a wide range of fields—from human rights and environmental standards, to cyber conflict and intellectual property—to show how the relationship between politics and international law varies depending on the sites where it unfolds.

Research Handbook on the Politics of International Law

"Since the creation of the United Nations in 1945, international law has sought to configure itself as a universal system. And yet, despite the best efforts of international institutions, scholars and others to assert the universal application of international law, its relevance and applicability has been influenced, if not directed, by political power. Over the past decade, discourse has tended to focus on the implications for international law of a unipolar world, characterised by US hegemony. However, that the international system may now be experiencing a tendency towards multipolarity, with various sites of power able to exert a telling influence on international relations and international law. Recent events such as Russia's excursion into Georgia, the breakdown of the Doha round of trade negotiations, the USA's questionable actions in the War on Terror, the prominence of emerging nuclear powers, China's assertions of its own interests on a global scale, and the rise of regional trading blocs, all pose significant questions for international law and the international legal order. International Law in a Multipolar World features contributions from a range of contributors including Nigel White, Michael Schmitt, Richard Burchill, Alexander Orakhelashvili and Christian Phipan, addressing some of the questions that multipolarity poses for the international legal system. The contributions to the volume explore issues including the use of force, governance, sovereign equality, regionalism and the relevance of the United Nations in a multipolar world, considering the overarching theme of the relationship between power and law"--

International Law in a Multipolar World

States often regard themselves bound by treaty rules which have developed under customary international law, even though many of the treaties themselves have not been ratified. The Law of the Sea Convention, for instance, has generated new customary rules which modified the 1958 Geneva Conventions. These & many other issues are dealt with clearly & systematically in this informative handbook on the relations between written & unwritten international law. The conclusions of the first edition of Customary International Law & Treaties were largely confirmed by the International Court of Justice in the Nicaragua Case. This fully revised second edition, while basing itself on the original version, brings the subject up to date.

International Law and World Order

The concept of the common heritage of mankind is one of the most extraordinary developments in recent intellectual history and one of the most revolutionary and radical legal concepts to have emerged in recent decades. The year 1997 marks the thirtieth anniversary of the advent of the concept in the domain of public international law. Ever since its emergence, it has become evident that no other

concept, notion, principle or doctrine has brought as much intensive debate, controversy, confrontation and speculation as the common heritage phenomenon did. This is because it is a philosophical idea that questions the regimes of globally important resources regardless of their situation, and requires major changes in the world to apply its provisions. In other words, the application and enforcement of the common heritage of mankind require a critical reexamination of many well-established principles and doctrines of classical international law, such as acquisition of territory, consent-based sources of international law, sovereignty, equality, resource allocation and international personality. This book aims to explore the legal theory and implications of the concept of the common heritage of mankind. It addresses almost all aspects of the concept in the light of the experience of three decades. The author takes into account the elements of the common heritage concept in the fields of jurisprudence, outer space law, the law of the sea, the law of Antarctica, international environmental law, human rights and general principles of public international law. It tries to develop a normative framework through which the concept may offer alternatives for the governance of the global commons.

Customary International Law and Treaties

Determining whether the Iran-US Claims Tribunal (the Tribunal) is a truly public international tribunal is not merely an interesting theoretical exercise. The Tribunal's legal character has significant ramifications, for example on enforceability at the international level, the applicability and scope of "res judicata" regarding dismissed claims, and the evidentiary value of its jurisprudence, particularly pursuant to Article 38(1) of the ICJ statute. This title explores the legal character of the Tribunal and its status under the law of peaceful settlement of international disputes. The public or private nature of the Tribunal is a matter of significant controversy. Certain peculiarities of the Tribunal, namely its accessibility to private claimants, the exclusion of the exhaustion of local remedy rule, and the regime provided for the execution of its awards suggests that it is not, in fact, wholly public. Conversely, the author analyses the Tribunal under a three-part test for public international character - (1) international treaty as origin, (2) applicable law international in nature, (3) controlling parties subject to international law - and finds that it meets all three criteria. In doing so, the author admittedly counters the apparent position of the Tribunal itself that its nature is a hybrid of both public and private elements. "The International Law Character of the Iran-United States Claims Tribunal" includes: - a historical survey on international tribunals; an analysis of the adverse arguments; and - a detailed discussion of the Tribunal's practice on expropriation cases to give a concrete example of its functioning on international law level, is considered in detail in Part Three. The controversial nature of the author's thesis, the thoroughness of the analysis, and the importance of the Tribunal itself make this a book of interest and import for academics who keep abreast of international law developments.

The Concept of the Common Heritage of Mankind in International Law

Examines the history of the rise and fall of the twentieth century's last major attempt to decolonize international law.

The International Law Character of the Iran-United States Claims Tribunal

Centered on progressiveness, these essays rigorously address some philosophical, conceptual and structural issues relating to the international legal system, the International Court of Justice (ICJ) and the international criminal tribunals. These include: the concept of the international law of co-progressiveness, *opinio juris* and customary international law, the rule of law, the interpretation of the ICJ Statute, law and expedience at the ICJ, the relationship between the International Criminal Court and the Security Council, the definition of crimes against humanity, guilty plea fairness, defenses to international crimes, constitutions of international organizations, September 11 and international law, international experiment in national constitution-making, discretionary function and foreign sovereign immunities, and the concept of human rights in Asia. This book is valuable to critical thinkers and scholars in international law and relations, policy-makers and international judges, practitioners and NGO advocates. This collection includes fourteen essays both new and previously published in fine journals such as *European JIL* (Oxford), *ICLQ* (Oxford), *German YIL*, *Max Planck YUNL*, *Columbia LR*, *Leiden JIL* (Cambridge) and *Chinese JIL*.

Completing Humanity

This book analyzes the traditional criteria of territorial acquisition and demonstrates their inadequacies in the modern context. It also addresses contemporary territorial doctrines and conflicts. It regards

territorial acquisition as a comprehensive process involving various considerations leading to the establishment or transfer of exclusive control over territory. This approach has many advantages and adds to the development of the law of territorial acquisition. The author also provides an analysis of the claims and counter-claims in major contemporary territorial disputes and suggests appropriate legal perspectives bearing upon decision-making in regard to them. This book will be highly useful to students, academics and practitioners in the field of international law, as well as all governments and institutions dealing with territorial matters.

Towards an International Law of Co-progressiveness

The purpose of this volume is dual. The first is to provide information about the question of the role that doctrines and practices of international law have played in the emergence and persistence of the phenomenon of socio-cultural fragmentation, and therefore of inter-group conflict, within African states. The second is to provide original thought about the ways in which, prompted by the emergent turn in our time to minority and group rights, international law and multilateral African states have begun the long journey toward modifying those doctrines and practices that have led to such unfortunate results, and have thereby begun to make very valuable contributions to the effort to prevent and/or reduce the incidence of inter-group strife in specific African contexts. The book is not, however, limited in scope by its utilisation of Africa as a case study. The book's core is based on analysis of traditional and contemporary international legal doctrines and practices, their effects in specific contexts, as well as on the role of multilateral institutions in the prevention of internecine conflict within established states. It is hoped that, with the use of African states as case studies, the book will be a contribution to the advancement of scholarly knowledge regarding the general question of the relationship among the doctrines of international law, the activities of multilateral institutions, and the management of the problems of fragmentation and internecine strife within established states the world over. This volume is relevant to international lawyers, specialists in international politics, diplomats, theorists, minority and group rights scholars, historians, and human rights activists in general. It is particularly relevant to the African studies specialist, the statesman and the diplomat.

Territorial Acquisition, Disputes, and International Law

This book deals with expropriation and other measures affecting property rights as set out in the awards of the Iran-U.S. Claims Tribunal, and thus examines the relation between general international law and the "lex specialis," viz., the provisions of the Algiers Declarations and the Treaty of Amity between the Governments of Iran and the United States. It studies what rights have been considered as property rights capable of being independently expropriated or affected by other measures, and what rights have not been so qualified, although they might have been considered as forming an element of valuation. Furthermore, the liability and attributability issues are discussed, as are the methods of compensation and of valuation.

Re-Defining Legitimate Statehood

Serving as a single volume introduction to the field as a whole, this ninth edition of Brownlie's *Principles of International Law* seeks to present international law as a system that is based on, and helps structure, relations among states and other entities at the international level.

The International law of expropriation as reflected in the work of the Iran-U.S. claims tribunals

The central theme of this book is the strengthening of the legitimacy and integrity of international law in the post-Cold War, interdependent international community. The investigation focuses on the relationship between international decision-making procedures, in particular compulsory third party dispute settlement, and legitimacy and integrity as perceived by states and other international actors. It starts with a description of recent developments with regard to dispute settlement in the law of the sea, GATT/WTO, Antarctica, and global environmental protection. Compulsory third-party dispute settlement has been accepted in treaty regimes in these fields as it is indispensable in safeguarding the legitimacy and integrity of such regimes. The focus then shifts to an extensive analysis of changes in the international community in general, and their consequences for the international legal system. By focusing on legitimacy and integrity, and by providing a theoretical framework in which these concepts can be applied, this book contributes significantly to the discussion of the theoretical foundations of international law. The author is winner of the 1995 Award of the Foundation Praemium Erasmianum, Amsterdam.

Brownlie's Principles of Public International Law

This fully updated and revised edition explores the evolution, nature and function of international law in world politics.

Third Party Dispute Settlement in an Interdependent World

Part 4 - Trade:.

International Law and International Relations

What constitutes a sovereign state in the international legal sphere? This question has been central to international law for centuries. *Sovereignty, International Law, and the Princely States of Colonial South Asia* provides a compelling exploration of the history of sovereignty through an analysis of the jurisdictional politics involving a specific set of historical legal entities. Governed by local rulers, the princely states of colonial South Asia were subject to British paramountcy whilst remaining legally distinct from directly ruled British India. Their legal status and the extent of their rights remained the subject of feverish debates through the entirety of British colonial rule. This book traces the ways in which the language of sovereignty shaped the discourse surrounding the legal status of the princely states to illustrate how the doctrine of sovereignty came to structure political imagination in colonial South Asia and the framework of the modern Indian state. Opening with a survey of the place of the princely states in the colonial structures of South Asia, *Sovereignty, International Law, and the Princely States of Colonial South Asia* goes on to illustrate how international lawyers, British politicians, colonial officials, rulers and bureaucrats of princely states, and anti-colonial nationalists in British India used definitions of sovereignty to construct political orders in line with their interests and aspirations. By invoking the vernacular of sovereignty in contrasting ways to support their differing visions of imperial and world order, these actors also attempted to reconfigure the boundaries among the spheres of the national, the imperial, and the international. Throughout the eighteenth, nineteenth, and early twentieth centuries, debates and disputes over the princely states continually defined and redefined the concept of sovereignty and international legitimacy in South Asia. Using rich material from the colonial archives, *Sovereignty, International Law, and the Princely States of Colonial South Asia* conveys an understanding of the history of sovereignty and the construction of the modern Indian nation-state that is still relevant today. A riveting read, this book will be of considerable interest and importance to scholars of international law and South Asia, legal historians, and political scientists.

International Law and Development

Lauren Benton and Lisa Ford find the origins of international law in empires, especially in the British Empire's sprawling efforts to refashion the imperial constitution and reorder the world. These attempts touched on all the issues of the early nineteenth century, from slavery to revolution, and changed the way we think about the empire's legacy.

International Law & World Order

"Modern Law of Self-Determination" examines the significance of the right to self-determination in the new world order. For decades, self-determination was seen as a right of colonial peoples. Now the decolonization process has come to an end, its scope and meaning need to be re-examined. Increasingly, the ethnic groups within established nation States claim some separate political status. In extreme cases of persecution of an ethnic group by a ruling majority, secession may provide the only viable remedy to resolve the conflict. However, international law cannot promote a general Balkanization' of the globe. The legitimate interests of all ethnic groups should be accommodated within the framework of existing States. Self-determination, which today is predominantly understood as implying a right to independent statehood, may have to be re-interpreted as conferring no more than a right to autonomy or federal statehood. Such a conception is in line with a modern tendency that highlights the necessary internal dimension of self-determination. "Modern Law of Self-Determination" is based on papers delivered at a conference in Bonn in August 1992 which have been updated and reviewed by the authors in light of the discussions following their presentation.
