Classical Heritage and European Identities

Classical Heritage and European Identities examines how the heritages of classical antiquity have been used to construct European identities, and especially the concept of citizenship, in Denmark from the eighteenth century to the present day. It implements a critical historiographical perspective in line with recent work on the "reception" of classical antiquity that has stressed the dialectic relationship between past, present and future. Arguing that the continuous employment and appropriation of lassical heritages in the Danish context constitutes an interesting case of an imagined geography that is simultaneously based on both national and European identities, the book shows how Denmark's imagined geography is naturalized through very distinctive uses of classical heritages within the educational and heritage sectors. It does so by exploring three significant and interrelated arenas where the heritages of classical antiquity are used to shape Danes as European citizens. Together, these three cases emphasize different but interconnected ways in which classical heritages are being put to use in order to construct Denmark's own distinctive national identity within Europe. Finally, the book also sheds light on some of the challenges that face unified and homogenous conceptions of European heritage and identity, as well as the notion of the "classical" itself. Classical Heritage and European Identities is the first English-language monograph to situate the Danish case within the wider European

context. As such, the book should be essential reading for researchers and students engaged in the study of heritage and museums, classics, education and modern European history.

The New Europe at the Crossroads

The New Europe at the Crossroads: Europe's Classical Heritage in the Twenty-first Century consists of a selection of essays presented at the «New Europe at the Crossroads» conferences in York, England (1998), and at Teikyo University in Berlin, Germany (1999). The diverse contributions from scholars in the fields of education, philosophy, political science, modern languages, literature, physics, theology, and economics show that a truly united Europe must remain a distant utopia as long as cultural, religious, and ethnic identities are a cause for repression, discrimination, and strife. The essays go beyond the usual political and economic discussions associated with a united Europe. They broach the question of Europe's identity in the twenty-first century and raise the specter of a Europe that continues to be divided by ethnic differences, cultural intolerance, and an inability to come to terms with its «others.»

Heritage, Ideology, and Identity in Central and Eastern Europe

Essays looking at heritage practices and the construction of the past, along with how they can be used to build a national identity.

Classical Influences on European Culture, A.D. 1500-1700

The papers illustrate the different ways in which the Renaissance made use of its classical heritage.

Critical Heritage Studies and the Futures of Europe

Cultural and natural heritage are central to 'Europe' and 'the European project'. They were bound up in the emergence of nation-states in the eighteenth and nineteenth centuries, where they were used to justify differences over which border conflicts were fought. Later, the idea of a 'common European heritage' provided a rationale for the development of the European Union. Now, the emergence of 'new' populist nationalisms shows how the imagined past continues to play a role in cultural and social governance, while a series of interlinked social and ecological crises are changing the ways that heritage operates, with new discourses and ontologies emerging to reconfigure heritage for the circumstances of the present and the uncertainties of the future. Taking the current role of heritage in Europe as its starting point, *Critical Heritage Studies and the Futures of Europe* presents a number of case studies that explore key themes in this transformation. Contributors draw on a range of disciplinary perspectives to consider, variously, the role of heritage and museums in the migration and climate 'emergencies'; approaches to urban heritage conservation and practices of curating cities; digital and digitised heritage; the use of heritage as a therapeutic resource; and critical approaches to heritage and its management. Taken together, the chapters explore the multiple ontologies through which cultural and natural heritage have and continue to intervene actively in redrawing the futures of Europe and the world. Praise for *Critical Heritage Studies and the Futures of Europe* 'Filled with many fascinating and diverse chapters, this book vividly demonstrates the dynamism and breadth of critical heritage study of, in, and entangled with Europe today' Sharon Macdonald, Alexander von Humboldt Professor of Social Anthropology and Director of the Centre for Anthropological Research on Museums and Heritage (CARMAH) in the Institute of European Ethnology at Humboldt-Universität zu Berlin. 'Far from being restrictive, let alone chauvinistic, the multiscalar European focus of this book confirms the breadth and relevance of current critical heritage studies. With contributions addressing such topical issues as climate emergencies, urban landscapes, cultural industries, new media and identity politics – be they written by established scholars or by emerging researchers – it is "Europe" with all its shared grounds and recurrent divergences that comes into sharper relief. From this vantage point, readers of this compelling book will be better positioned for reflecting on and eventually influencing and challenging our heritage futures.' Nathan Schlanger, Professor of Archaeology, École nationale des chartes, Paris. 'This book addresses European heritage realities and futures through new voices, paradigms, and methods. It is a collage of tensions – practically a representation of Europe itself – through which to comprehend contemporary intersections of time, place, things, and meaning. It contributes to new vistas in heritage studies: the offer of design and imagination as methods; reckonings with data and climate change as seemingly uncontrollable actors; and the ongoing negotiation of 'criticality' in the making of our responsibilities for the past in the present' Christopher Whitehead, Professor of Museology, Newcastle University.

The Impact of Classical Greece on European and National Identities

These thirteen papers, from a colloquium held at the Netherlands Institute at Athens in 2000, examine European scholarship's fascination with classical Greece during the 19th and 20th centuries. Arranged geographically and then thematically, the papers discuss Greek attitudes towards classical archaeology and literature, Germany and Neoclassicism, classical Greece in Dutch literature and the influence of Greece on Dutch politics, the influence of Alexander the Great and the Persian Wars, the classical element in Victorian verse and interpretations of Homeric epic.

The Classical Heritage and Its Beneficiaries

Cultural identity is a key area of debate in contemporary Europe. Despite widespread use of the past in the construction of ethnic, national and European identity, theories of cultural identity have been neglected in archaeology. Focusing on the interrelationships between concepts of cultural identity today and the interpretation of past cultural groups, *Cultural Identity and Archaeology* offers proactive archaeological perspectives in the debate surrounding European identities. This fascinating and thought-provoking book covers three key areas. It considers how material remains are used in the interpretation of cultural identities, for example 'pan-Celtic culture' and 'Bronze Age Europe'. Finally, it looks at archaeological evidence for the construction of cultural identities in the European past. The authors are critical of monolithic constructions of Europe, and also of the ethnic and national groups within it. In place of such exclusive cultural, political and territorial entities the book argues for a consideration of the diverse, hybrid and multiple nature of European cultural identities.

Cultural Identity and Archaeology

This book critically explores the idea of Europe since the French Revolution from the perspective of intellectual history. It traces the dominant and recurring theme of Europe-as-Christendom in discourse concerning the relationship of religion, politics and society, in historiography and hermeneutics, and in theories and constructions of identity and 'otherness'. It examines the evolution of a grand narrative by which European elites have sought to define European and national identity. This narrative, the author argues, maintains the existence of common historical and intellectual roots, common values, culture and religion. The book explores its powerful legacy in the positive creation of a sense of European unity, the ways in which it has been exploited for ideological purposes, and its impact on non-Christian communities within Europe.

Christendom and European Identity

This volume provides a coherent critical examination of current issues related to the religious roots of contemporary, i.e. post-1990 European identity. This book has taken a multi and interdisciplinary approach, analysing the religious roots of Europe's identity today, with a focus on the secular context of religious communities. This will serve the readers to perceive their own identity in a wider context of shared values, reaching beyond a particular faith or non-religious framework.

The Religious Roots of Contemporary European Identity

This book explores the analytical and practical value of the notion of "rooted cosmopolitanism" for the field of cultural heritage. Many concepts of present-day heritage discourses - such as World Heritage, local heritage practices, or indigenous heritage - tend to elide the complex interplay between the local and the global - entanglements that are investigated as "glocalisation" in Globalisation Studies. However, no human group ever creates more than a part of its heritage by itself. This book explores an exciting new alternative in scholarly (critical) heritage discourse, the notion of rooted cosmopolitanism, a way of making manifestations of globalised phenomena comprehensible and relevant at local levels. It develops a critical perspective on heritage and heritage practices, bringing together a highly varied yet conceptually focused set of stimulating contributions by senior and emerging scholars working on the heritage of localities across the globe. A contextualising introduction is followed by three strongly theoretical and methodological chapters which complement the second part of the book, six concrete, empirical chapters written in "response" to the more theoretical chapters. Two final reflective conclusions bring together these different levels of analysis. This book will appeal primarily to archaeologists, anthropologists, heritage professionals, and museum curators who are ready to be confronted with innovative and exciting new approaches to the complexities of cultural heritage in a globalising world.

Rooted Cosmopolitanism, Heritage and the Question of Belonging

This study deals with the development, existence, and dilemmas concerning European identity among youth in Europe. It compiles the results of a research conducted within the Comenius project "Perception, Attitude, Movement - Identity Needs Action (PAM-INA)." The eight participating institutions in the PAM-INA project were from Germany, Slovenia, France, Greece, Poland, Northern Ireland (UK), Cyprus, and Sweden. The authors from the respective countries discuss the results and present their views on the issue of European identity and citizenship. (Series: Learning Europe. Perspectives for Teaching European Cultural Studies / Europa lernen. Perspektiven für eine Didaktik europäischer Kulturstudien - Vol. 3)

European Identity at the Crossroads

A Handbook to Classical Reception in Eastern and Central Europe is the first comprehensive English language study of the reception of classical antiquity in Eastern and Central Europe. This groundbreaking work offers detailed case studies of thirteen countries that are fully contextualized historically, locally, and regionally. The first English-language collection of research and scholarship on Greco-Roman heritage in Eastern and Central Europe Written and edited by an international group of seasoned and up-and-coming scholars with vast subject-matter experience and expertise Essays from leading scholars in the field provide broad insight into the reception of the classical world within specific cultural and geographical areas Discusses the reception of many aspects of Greco-Roman heritage, such as prose/philosophy, poetry, material culture Offers broad and significant insights into

the complicated engagement many countries of Eastern and Central Europe have had and continue to have with Greco-Roman antiquity

A Handbook to Classical Reception in Eastern and Central Europe

Ancient Monuments and Modern Identities sets out to examine the role of archaeology in the creation of ethnic, national and social identities in 19th and 20th century Greece. The essays included in this volume examine the development of interpretative and methodological principles guiding the recovery, protection and interpretation of material remains and their presentation to the public. The role of archaeology is examined alongside prevailing perceptions of the past, and is thereby situated in its political and ideological context. The book is organized chronologically and follows the changing attitudes to the past during the formation, expansion and consolidation of the Modern Greek State. The aim of this volume is to examine the premises of the archaeological discipline, and to apply reflection and critique to contemporary archaeological theory and practice. The past, however, is not a domain exclusive to archaeologists. The contributors to this volume include prehistoric and classical archaeologists, but also modern historians, museum specialists, architectural historians, anthropologists, and legal scholars who have all been invited to discuss the impact of the material traces of the past on the Modern Greek social imaginary.

Ancient Monuments and Modern Identities

This volume explores innovative ways of expanding classical languages and cultures to educational and museum audiences. It shows that classical subjects have an important role to play within society and can enrich individuals' lives in many different, and perhaps surprising, ways. Chapters present projects covering literacy and engagement with reading, empowering students to understand and use new types of vocabulary, discovering the personal relevance of ancient history and the resonance of ancient material culture and stories. Contributors demonstrate that classical subjects can be taught cost-effectively and inclusively by non-specialist teachers and in non-traditional settings. In their various ways, they highlight the need to rethink the role of Classics in twenty-first-century classrooms and communities. Recommendations are made for further development, including ways to improve research, policy and practice in the field of Classics education. *Expanding Classics* presents an important series of case studies on classical learning, of interest to museum educators, teacher trainers, school leaders and curriculum designers, as well as those teaching in primary, secondary and further education settings in the UK and worldwide.

Expanding Classics

This book uses a theoretical and empirical approach to explore the philosophies of European citizenship and European identity. The author applies a focused analytical framework to argue that European identity and citizenship should be perceived as postmodern categories which are multi-layered, dynamic and fluid. The book offers a detailed review of political and legal studies which do not comprehend or explain postmodernist concepts of citizenship and identity. In the theoretical part of the book various philosophical models of citizenship and identity (from antiquity to the postmodern era) are portrayed, and the author's own theory and analytical framework is developed. The empirical part of the book discusses a variety of case studies illustrating how European Union policies apply to this framework.

European Identity and Citizenship

This book combines media studies and linguistics with theories of national and supranational identity to offer an interdisciplinary approach to the study of European identity/ies and news discourses. Taking representations of 'Islamist terrorism' and Turkey's accession to the European Union as case studies, it analyses the discursive construction of supranational European identity through the discursive distinction of 'Us' and 'Them'. Moreover, it compares the media's representations of the 'Other' in different socio-political moments in Europe- from times of European integration (2004-5) to the European dystopia (2015-16) through the discourse analysis of specific Greek, British and French newspapers. This timely work synthesizes classic argumentative approaches and Gramscian thought in the study of media discourses by focusing on the Aristotelian concept of topos and introducing the concept of 'hegemonic knowledge'. This pioneering work will appeal to scholars across the fields of linguistics, social anthropology, European politics, and media studies.

European Identity and the Representation of Islam in the Mainstream Press

The volume focuses on music during the process of European integration since the Second World War. Often music in Europe is defined by its relation to the concept of Occidentalism (Musik im Abendland; western music). The emphasis here turns rather to recent manifestations of its involvement in ensembles, events, musical organisations and ideas; questions of unity and diversity from Bergen to Tel Aviv, from Lisbon to Baku; and deals with the tension between local, regional and national music within the larger confluence of European music. The status of classical and avant-garde music, and to a degree rock and pop, during Europe's development the past sixty years are also reviewed within the context of eurocentrism – the domination of European music within world music, a term propagated by anthropologists and ethnomusicologists several decades ago and based on multiculturalism. Conversely, the search for a musical European identity and the ways in which this search has in turn been influenced by multiculturalism is an ongoing, dynamic process.

The Role of Music in European Integration

This book turns the received wisdom of European history inside out. From discussions of the Gothic, Hun and Vandal invasions and the fall of the Roman Empire, through other great events and issues of European history, Josep Fontana re-examines the traditional acceptance of such ideas as classical heritage, medieval Christendom, reformation and counter-reformation, absolutism, and the idea of progress. At the same time he draws attention to the existence and validity of dissidence, rebellion and variety which are, for him, identifying marks of Europe.

The Distorted Past

A Handbook to Classical Reception in Eastern and Central Europe is the first comprehensive English-language study of the reception of classical antiquity in Eastern and Central Europe. This groundbreaking work offers detailed case studies of thirteen countries that are fully contextualized historically, locally, and regionally. The first English-language collection of research and scholarship on Greco-Roman heritage in Eastern and Central Europe Written and edited by an international group of seasoned and up-and-coming scholars with vast subject-matter experience and expertise Essays from leading scholars in the field provide broad insight into the reception of the classical world within specific cultural and geographical areas Discusses the reception of many aspects of Greco-Roman heritage, such as prose/philosophy, poetry, material culture Offers broad and significant insights into the complicated engagement many countries of Eastern and Central Europe have had and continue to have with Greco-Roman antiquity

A Handbook to Classical Reception in Eastern and Central Europe

This short volume addresses the question of the heritage of roman cultural following the collapse of the roman state and the development of the various political bodies which became western european nations.

The Classical Heritage and Its Beneficiaries

This book provides theoretical and empirical discussion of migration, identity and Europeanisation. With contributions from leading international scholars, it provides both an overview of theoretical perspectives and a comprehensive set of case studies, covering both Eastern and Western Europe. Contributors draw from disciplines such as historical sociology, discourse analysis, social psychology and migration studies, while the editors bring these subjects into a coherent theoretical and historical framework, to discuss the emergence of new collective identities and new borders in Europe today.

The Classical Heritage of the Middle Ages

Original Scholarly Monograph

Europeanisation, National Identities and Migration

This volume casts a fresh look at the multifaceted expressions of diachronic Hellenisms. A distinguished group of historians, classicists, anthropologists, ethnographers, cultural studies, and comparative literature scholars contribute essays exploring the variegated mantles of Greek ethnicity, and the legacy of Greek culture for the ancient and modern Greeks in the homeland and the diaspora, as well as for the ancient Romans and the modern Europeans. Given the scarcity of books on diachronic Hellenism in

the English-speaking world, the publication of this volume represents nothing less than a breakthrough. The book provides a valuable forum to reflect on Hellenism, and is certain to generate further academic interest in the topic.

Classical Influences on European Culture A.D. 1500-1700

Populism and Heritage in Europe explores popular discourses about European and national heritage that are being used by specific political actors to advance their agendas and to prevent minority groups from being accepted into European society. Investigating what kind of effect the politics of fear has on these notions of heritage and identity, the book also examines what kind of impact recent events and crises have had on the types of European memories and identities that have been promoted by the supporters of right-wing populist parties. Based on qualitative fieldwork conducted in six countries, this book specifically analyses how anti-European identities are being articulated by right-wing populist individuals. Providing an analysis of the manifestos, speeches and official documents of such parties, the book examines how they instrumentalise xenophobia, Islamophobia, Euroscepticism, globalisation and international trade in European spaces to mobilise the masses hit by financial crisis and refugee crisis. Drawing on in-depth interviews with the sympathisers of populist movements, Kaya provides some insights into the main motivations of these individuals in resorting to nativist and populist discourses, whilst also providing a thorough analysis of the use of the past and heritage by such parties and their followers. *Populism and Heritage* provides a unique insight into one of the most contested trends of the contemporary age. As such, the book should be of great interest to those working in the fields of heritage studies, cultural studies, politics, sociology, anthropology, philosophy and history.

Reflections on Europe in Transition

The imperatives surrounding museum representations of place have shifted from the late eighteenth century to today. The political significance of place itself has changed and continues to change at all scales, from local, civic, regional to national and supranational. At the same time, changes in population flows, migration patterns and demographic movement now underscore both cultural and political practice, be it in the accommodation of 'diversity' in cultural and social policy, scholarly explorations of hybridity or in state immigration controls. This book investigates the historical and contemporary relationships between museums, places and identities. It brings together contributions from international scholars, academics, practitioners from museums and public institutions, policymakers, and representatives of associations and migrant communities to explore all these issues.

Hellenisms

This book written by eighteen specialists deals with the reception of Greek and Latin culture in France in the sixteenth and seventeenth centuries. It is intended for non-specialists interested in classical influences on French belles-lettres and visual arts.

Populism and Heritage in Europe

This publication examines the contribution of universities to the cultural, material and intellectual heritage of Europe. It contains a range of papers authors representing 15 institutions, who work both on the heritage of universities from an academic perspective, as well as the management and preservation of university heritage. Four case studies are presented on the role of particular universities in Italy, Portugal, France and Spain. The book also seeks to promote co-operation between universities at European level to define a common approach to important issues and problems.

Museums, Migration and Identity in Europe

In a world of increasingly heterogeneous societies, matters of identity politics and the links between collective identities and national, racial, or ethnic intolerance have assumed dramatic significance - and have stimulated an enormous body of research and literature which rarely transcends the limitations of a national perspective, however, and thus reproduces the limitations of its own topic. Comparative attempts are rare, if not altogether absent. *Identity and Intolerance* attempts to shift the focus toward comparison in order to show how German and American societies have historically confronted matters of national, racial, and ethnic inclusion and exclusion. This perspective sheds light on the specific links between the cultural construction of nationhood and otherness, the political modes of integration and exclusion, and the social conditions of tolerance and intolerance. The contributors also attempt to

integrate the approaches offered by the history of ideas and ideologies, social history, and discourse theory.

The Classical Heritage in France

This book approaches the relationship of modern Hungarian culture to classical heritage from the various viewpoints of identity politics, education, translation history, scholarship, and its impact on literature. Péter Hajdu examines the cultivation of the classics as an intellectual framework and crucial ingredient of the western aspect of Hungarian national identity. When the Hungarian nation building project developed ideas of national identity, it necessarily incorporated the historical narrative according to which the Hungarians arrived at their current homeland in the Middle Ages, and only later did it adopt European culture. The duplicity of a mostly imagined Asian, pagan, barbaric or nomadic and a Western, Christian, civilized identity, deeply rooted in European culture, has played and continues to play a role in the Hungarian discourse. Hajdu also studies the gradual disappearance of classics from the Hungarian school education since the 19th century, which has been accompanied by fervid political debates. However, over this period, translations of classical texts paradoxically became more frequent and popular with the decline of a classical education, even though fewer readers had access to the original texts. Despite this change, the translation strategies tended to remain school-bound. The knowledge of classical literature still leaves traces on Hungarian literature, which Hajdu explores using examples from 19th-century novels and contemporary poetry. This book sheds light on a topic of classical reception that has remained largely unexplored in this part of Europe, but one which has an incredibly rich history, culture, and literary tradition.

The Heritage of European Universities

European Heritage, Dialogue and Digital Practices focuses on the intersection of heritage, dialogue and digital culture in the context of Europe. Responding to the increased emphasis on the potential for heritage and digital technologies to foster dialogue and engender communitarian identities in Europe, the book explores what kind of role digital tools, platforms and practices play in supporting and challenging dialogue about heritage in the region. Drawing on fieldwork involving several European museums and heritage organisations, the chapters in this volume critically engage with the role of digital technology in heritage work and its association with ideas of democratisation, multivocality and possibilities for feedback and dialogic engagement in the emerging digital public sphere. The book also provides a framework for understanding dialogue in relation to other commonly used approaches in heritage institutions, such as participation, engagement and intercultural exchange. The authors map out the complex landscape of digitally mediated heritage practices in Europe, both official and unofficial, by capturing three distinct areas of practice: perceptions and applications of digitally mediated dialogues around heritage within European museums and cultural policy, facilitation of dialogue between European museums and communities through participatory design approaches and non-official mobilisation of heritage on social media. European Heritage, Dialogue and Digital Practices will be of interest to both scholars and students in the fields of heritage and museum studies, digital heritage, media studies and communication, the digital humanities, sociology and memory studies. The book will also appeal to policy makers and professionals working in a variety of different fields.

Identity and Intolerance

Through the analysis of several cases studies concerning Southern Europe (Spain, Italy, Slovenia, Albania, Greece and Turkey) the book aims rethinking the cultural history of Mediterranean nationalisms by suggesting how it is an interconnected experience, directly related to the intellectual examples of Northern Europe, but also developing its own particular trend.

Modern Hungarian Culture and the Classics

Heritage and Festivals in Europe critically investigates the purpose, reach and effects of heritage festivals. Providing a comprehensive and detailed analysis of comparatively selected aspects of intangible cultural heritage, the volume demonstrates how such heritage is mobilised within events that have specific agency, particularly in the production and consumption of intrinsic and instrumental benefits for tourists, local communities and performers. Bringing together experts from a wide range of disciplines, the volume presents case studies from across Europe that consider many different varieties of heritage festivals. Focusing primarily on the popular and institutional practices of heritage

making, the book addresses the gap between discourses of heritage at an official level and cultural practice at the local and regional level. Contributors to the volume also study the different factors influencing the sustainable development of tradition as part of intangible cultural heritage at the micro- and meso-levels, and examine underlying structures that are common across different countries. *Heritage and Festivals in Europe* takes a multidisciplinary approach and as such, should be of interest to scholars and students in the fields of heritage studies, tourism, performing arts, cultural studies and identity studies. Policymakers and practitioners throughout Europe should also find much to interest them within the pages of this volume. Chapters 1, 2, 3, 10, 11, and 13 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

European Heritage, Dialogue and Digital Practices

Cinemas, Identities and Beyond examines different modes of representing and constructing identities in and through the medium of film, transcending the narrow confines of the local / national / regional, and challenging spatial and temporal boundaries. It gathers fifteen essays that explore different dimensions of identities in contexts ranging from domestic spheres, urban milieus, socio-political environments, diasporic film-making issues, anthropology, film festivals, and psychoanalysis, to the examination of stardom in society. Engaging with cinematic representations, narrative conventions, film form, industry concerns, and other socio-cultural-economic-political factors relating to the production, distribution, exhibition and consumption of film, *Cinemas, Identities and Beyond* contributes to one of the most thought-provoking contemporary debates on cinemas and identities in film studies. Revisiting films such as *Farewell My Concubine*, *The Matrix* trilogy, *The Straight Story*, *El Topo*, and *Days of Being Wild*, this anthology establishes a framework that actively queries stabilised, ideological paradigms. The book discovers new frontiers and discourses to help us better understand ourselves and our surroundings when another decade of the new millennium is about to begin. *Cinemas, Identities and Beyond* will prove to be of value to a broad range of scholars, critics and students who are interested in issues pertaining to identities, and their construction in and beyond film.

In Search of Pre-Classical Antiquity: Rediscovering Ancient Peoples in Mediterranean Europe (19th and 20th c.)

Western societies draw crucially on concepts of the 'individual' in constructing their images of the ethnic group and nation and define these in terms of difference. This study explores the implications of these constructs for Western understanding of social order and ethnic conflicts. Comparing them with the forms of cultural identity characteristic of Melanesia as they have developed since pre-colonial times, the author arrives at a surprising conclusion: he argues that these kinds of identities are more properly and adequately viewed as forms of disguised or denied resemblance, and that it is these covert commonalities that give rise to, and prolong, social divisions and conflicts between groups.

The Classical Heritage and Its Beneficiaries

"Rethinking Heritage" brings together leading writers and thinkers to examine the ways in which ingrained assumptions about heritage are being challenged today. It explores key questions that surround heritage as a pressing political issue: what happens when the concept of culture is uncoupled from the nation? What meanings does heritage have in the context of the new societies and within the so-called new "politics of difference"? How does history become heritage? What history should we preserve as heritage? The contributors draw upon visual, literary and documentary evidence to examine heritage's contested histories. The result is an anthology of critical writing which should be indispensable reading for those with an interest in cultural history, politics and European studies.

Heritage and Festivals in Europe

New things are forgotten old things - this rediscovery of the past is especially important in horsemanship and equestrian sports. Despite advances in sciences and technology, the physiologies and psychologies of the two principal agents, the equid and the human, have undergone relatively few changes since horse domestication. The studies collected in this volume outline such essential and recurring challenges in equestrianism as gender issues, equine identification, the use of hyperflexion and groundwork in training, as well as many others, from prehistory to this day.

Mediterranean Sea Fish Identification

293 fish in full colour, 1 fish and description etc. per page! including maximum and average lengths and weight where available! with fish names in 6 different languages: English, French, Italian, Maltese, Greek. Plus, Scientific (is also Latin) & Species names. Listing all the main species of fish caught around the Mediterranean, complete with full colour pictures, descriptions of fish markings and areas of the fish that can be harmful, one fish per page including venomous, Traumatogenic and poisonous species, what you can or can not eat, even which fish are likely to give you an electric shock, all the spines, teeth, other sharp bits and more!

Europe and Mediterranean Marine fish

Richly illustrated, backed-up by an abundance of maps and bibliographic references, this entirely revised Atlas presents the current geography, biology, mode of introduction, distinct taxonomic characteristics of 188 exotic fishes that have reached the Mediterranean since the piercing of the Suez Canal. A majority of these species (107) are new to the 2nd edition, having reached the Basin in the last twenty years, from both the Indo-Pacific region and the tropical Atlantic. The reader will find as well a description of 88 additional taxa that are often (mistakenly) listed as exotic in the scientific literature.

Sea Angling Mediterranean Fish Identification

This volume presents a fully illustrated field guide for the identification of the sharks and rays most relevant to the fisheries of the Mediterranean and Black Sea. An extensive literature review was carried out for the preparation of this document. A total of 49 sharks, 34 batoids and 1 chimaera are fully treated. The presence of 5 sharks and 2 batoids included in this field guide, need, however, to be confirmed. The guide includes sections on technical terms and measurements for sharks and batoids, and fully illustrated keys to those orders and families that occur in the region. Each species account includes: at least one annotated illustration of the species highlighting its relevant identification characters; basic information on nomenclature, synonyms and possible misidentifications; FAO common names; basic information on size, habitat and biology, distribution, importance to fisheries, and conservation and exploitation status.

Atlas of Exotic Fishes in the Mediterranean Sea - 2nd Edition

Fishes of the Eastern Mediterranean is the newest and most comprehensive guide to all known fish species of this important region. The Eastern Mediterranean is a dynamic marine environment due to the many migrant species invading the Mediterranean from the Red Sea. This book includes over 470 species, migrant and indigenous, of all habitats from tidal pools to deepwater. Both amateur fish enthusiasts and scientists will find essential information on habitats and life history.

Field Identification Guide to the Sharks and Rays of the Mediterranean and Black Sea

This guide presents the egg and larval descriptions of 100 species of fishes belonging to 55 families, which are most likely to be present in plankton samples collected in the continental shelf and oceanic waters of the Western Mediterranean Sea. The guide is structured in two parts. The first introductory part describes the different applications of ichthyoplankton studies in fisheries research, the main sampling strategies, methods and gears, the early life history of fishes and how to identify them. A brief historical account of ichthyoplankton identification studies in the Mediterranean Sea is also provided. The second part of the guide contains the identification sheets of the species. Each species sheet includes the following information: illustration of the adult fish and information on its habitat and spawning season; description of the main features useful towards identifying the egg, yolk sac and larval stage of each fish species; illustrations and (when available) photos of the different life stages.

Europe and Mediterranean Marine Fish Identification Guide

Sea Fishes of the Mediterranean reveals the fascinating wealth of sea life found in this diverse but little-documented region. This compact and easy-to-use guide, illustrated with many specially-commissioned colour photographs taken in a number of unique and exotic locations, is an essential companion for anyone interested in the marine life of the many seas that make up the Mediterranean Sea. Designed to be of practical use to divers, snorkelers and underwater photographers, this guide will be welcomed by the increasing number of visitors to the Mediterranean, which has become one of the most popular dive destinations in the world. It covers Gibraltar, Spain, France, Monaco, Corsica, Sardinia, Italy,

Malta, Croatia, Greece, Crete, Cyprus, Turkey, Syria, Lebanon, Israel, Egypt, Libya, Tunisia, Algeria and Morocco.

Fishes of the Eastern Mediterranean

Sea Angling Atlantic Fish Identification covers all the main species in the Atlantic Ocean including a full colour picture of each fish along with description and scientific name. all the sharks, ray's, wrasse, bream and even gobies, pages on conservation etc and all the dangerous non edible species including all the spines etc. found on different species.

Overview of the Conservation Status of the Marine Fishes of the Mediterranean Sea

This photographic and descriptive guide to the fish species that inhabit the North Atlantic and Mediterranean is unique in its emphasis on the appearance of marine fish in their natural habitats. It expands and recasts the Lythgoes' highly regarded first edition published two decades ago. In particular, all of the more than 200 color photographs are new, and most are accompanied by line drawings that emphasize distinctive traits. The fish are arranged by class, family, and species, and succinct descriptions give detailed information about anatomy, distribution, food, and breeding habits. Most of the photographs were taken underwater, providing valuable information on how the fish swims in nature, its true colors and pattern, and whether or not it is camouflaged against its natural background. The geographical area covered in the book includes the Atlantic coastal waters of the United States and Canada north of Chesapeake Bay; the Mediterranean; and from Gibraltar north to the Arctic, including all the coasts of Europe. John Lythgoe, a Senior Research Fellow at the University of Bristol, is an expert on the appearance and color of fish underwater. The section of the book on the gobies, a group of fish that are as difficult to study as they are interesting, has been contributed by Peter J. Miller. Gillian Lythgoe is a diver, photographer, and the future and managing director of Planet Earth Pictures, whose collection covers a wide range of natural history and environmental subjects.

A guide to the eggs and larvae of 100 common Western Mediterranean Sea bony fish species

CD-ROM version of a UNESCO best-seller for ichthyologists of the same title. Presents up-to-date information on 1,265 fish species, with a fully illustrated identification key, drawings, full-colour illustrations and photographs, and distribution maps. The text is hyperlinked: an illustrated glossary defines more than 500 scientific terms and over 5,000 bibliographic references. Also published on printed version: out of print

Mediterranean and Atlantic Fish Guide

"Abstract: This is an annotated checklist of the marine fish species of Lebanon (Levant coast, eastern Mediterranean). It comprises a total of 367 fish species distributed in 159 families and 27 orders, out of which 70 species are non-indigenous and 28 are recorded for the first time from Lebanon. The checklist includes all names and citations of species found in the literature, as well as references to specimens available in museum collections. It also includes an updated zoogeographic distribution and conservation status for each species. Threats were estimated based on surveys and observations made over the last two decades; broadly categorized conservation actions were also suggested. Keywords: Pisces, fishes, new records, non-indigenous species, taxonomy, distribution, Levant, Mediterranean Sea"--Page 5.

Sea Fishes Of The Mediterranean Including Marine Invertebrates

Recent decades have seen significant changes in the biota of the Mediterranean and the Black Sea due to the introduction of non-indigenous species. Reliable scientific data on the dynamics of their distribution and abundance are essential to understand their ecological and economic effects. This review – in addition to providing images and descriptions of relevant species to aid in identification – presents a unique historical and regional perspective on these species' impacts, based on many years' worth of research. The Black Sea's primary invaders come from the Mediterranean. Species like the comb jelly *Mnemiopsis leidyi* have caused major declines in biodiversity in the region by crippling key segments of the food chain. Similar results have been noted in the Marmara Sea, a crucial water exchange point located between the Aegean Sea and the Black Sea. Infiltration into the Mediterranean comes from both the east and west – with Lessepsian species passing through the Suez Canal and fish and invertebrate species originating from the Atlantic expanding their ranges.

As of the publication of this review, over 900 non-indigenous species have been reported in the Mediterranean and almost 300 in the Black Sea, with these numbers expected to rise in the future. Numerous Lessepsian fishes are commercially relevant and have been absorbed into local markets, particularly in the eastern Mediterranean region. While these species are targeted through various fishing techniques, many others are simply discarded due to a lack of value and there are even some, such as lionfishes, pufferfishes and several species of jellyfishes, that present immediate dangers to human health. Stewardship of native species, regional cooperation on the enforcement of legal measures, increased public awareness and the creation of marine protected areas are thus essential to minimize and reduce the impacts of non-indigenous species both in the Mediterranean and the Black Sea.

Evidence-based Checklist of the Mediterranean Sea Fishes

A comprehensive account of deep-sea fishes, covering evolution, ecology and the potential threats posed by the growing fishing industry.

Sea Angling Fish of the Atlantic Ocean

This useful guide provides a comprehensive overview of the wide variety of snakes, lizards, crocodiles, turtles and tortoises to be found in Sri Lanka. Over 130 species, primarily native but with the odd exotic, are included in the book. Each description is supported by a clear colour photograph taken where possible in the snake's natural habitat. The guide looks at the more common species as well as focusing on some of the rarer, and in some cases highly endangered, species.

Fishes of the Sea

The waters of the northeast Atlantic and Mediterranean Sea are home to an amazing variety of sharks, rays and chimaeras. This comprehensive and easy-to-use field guide covers all 146 species found in the Mediterranean, the waters of the European Atlantic and Iceland, along all the Scandinavian coasts, in the Black Sea and as far south as the Canary Islands. Detailed species accounts describe key identification features, habitat, biology and status. Every species account comes with a colour distribution map, a depth guide, at-a-glance icons and colour illustrations. This must-have field guide also features illustrated key guides that enable you to accurately identify down to species, comparison plates of similar species, illustrations of eggcases where known and plates of teeth.

Fishes of the North-Eastern Atlantic and the Mediterranean

"This fully illustrated guide is designed to assist with the identification of a selection of deep-sea cartilaginous fishes of the Southeastern Atlantic Ocean and that portion of Southwestern Indian Ocean from 18°42'E to 30°00'E (FAO Fishing Area 47), that are of major, moderate or minor importance to fisheries. In this region, the deep-sea chondrichthyan fauna is currently represented by 50 shark, 20 batoid and 8 chimaera species. This guide includes full species accounts for 37 shark, 9 batoid and 4 chimaera species selected as being the more difficult to identify and/or commonly caught. Each species is described, depicted with a colour illustration and photo, and key distinguishing features of similar-looking species occurring in the same area are highlighted allowing for easy and accurate identification in the field. Keys to the shark and batoid orders and families, together with keys to chimaera and skate genera are also provided. This guide is intended to help fishery workers collecting catch data in the field in the identification of the cartilaginous fish species they might encounter. It is conceived to be updatable, offering the possibility to add new species accounts as new species are described."--Publisher's description.

The Marine Ichthyofauna of Lebanon

Deel 1 van een serie van 3 bevat een determinatietabel en een beschrijving van soorten uit 64 families. De 3 delen zullen totaal 1256 soorten van 218 families omvatten

Identification Guide to the Inshore Fish of the British Isles

Covering the whole of Europe, this guide includes every species of fish found in both fresh and salt water. Distribution maps are included for every species, showing where in Europe they occur.

Mediterranean Fishes

A guide to the underwater life of the Mediterranean Sea, Europe's most popular dive location. It includes practical advice for divers, explains the complex meteorological mechanisms of the area, and has illustrated biological information on important species of fish.

Non-indigenous species in the Mediterranean and the Black Sea

Proper designation of Essential Fish Habitat (EFH) is a highly important spatial measure in any management of fishery resources. EFH is defined as those waters and substrates necessary to fish for spawning, breeding, feeding, or growth to maturity, a definition that includes the physical, chemical and biological properties of marine areas and the associated sediment and biological assemblages that sustain fish populations throughout their full life cycle. This book presents latest advances in EFH mapping and modelling and introduces the environmental approach to EFH identification through the combined use of latest technologies and advanced techniques, such as Remote Sensing, Geographic Information Systems and Spatial Statistics. The contents of this book include overviews and comparisons of different approaches on species habitat modelling, methods to identify teleconnection patterns between large-scale meteo-oceanic phenomena and local environmental variation, and EFH maps for cephalopod, shrimp, hake, anchovy, sardine, and swordfish resources in the Mediterranean. The aims of this book are to provide accumulated knowledge on marine species essential habitat mapping and to be a source for further developments in the important topic of marine resource management.

Checklist of the Adriatic Sea Fishes

This guide, illustrated by more than 1,500 underwater photographs, presents nearly 1,200 species of fish in the Indian Ocean and Red Sea. The reference work dedicated to enthusiasts of the undersea world, more especially divers, will also be of interest to a wide audience that is curious about Nature and its riches.

Deep-Sea Fishes

The gilthead sea bream, *Sparus aurata*, a euryhaline Sparidae, occurs in the Mediterranean, the Black Sea and in the Eastern Atlantic. At present, the gilthead sea bream is one of the species of major economic interest in the Mediterranean. In addition, belonging to the order Perciformes, an order that underwent an explosive radiation 60 mya, it is of key interest for evolutionary studies. As a result of commercial interest and technological development in aquaculture an increased need of understanding its biology at molecular level is fundamental. The present book describes the accumulation of solid genomic information in sea bream in form of ESTs, gene expression data and RH map plus first comparative mapping approaches. It also shows functional studies of genes resulting from the established molecular tools. This work aims to give an introduction for students as well as scientists towards the construction and application of molecular tools for non-model organisms like marine fish species with scarce genomic information. It further seeks to show the significance working with non-model fish species taking into account the diverse physiology of Teleosts.

Sea Fishes and Invertebrates of the Mediterranean Sea

QLD Premier's Book Awards -- Shortlisted Science Writer Award Awarded a 2010 Whitley Certificate of Commendation for Natural History The largest, swiftest, highest-leaping, fastest-growing and most migratory fishes on the planet all live in the open ocean. Beautifully adapted to their world, they range from tiny drift fish and slow plankton-straining whale sharks to high-energy, streamlined predators such as tuna and marlin. Fishes of the Open Ocean, from Julian Pepperell, one of Australia's best-known marine biologists and world authority on oceanic fishes, is the first book to describe these fishes and detail their biology and the complex, often fragile world in which they live. This unique guide covers all major species including tuna, marlin, swordfish and pelagic sharks, as well as lesser-known ones such as flying fish, lancetfish, sunfish, pomfret, opah, louvar, fanfish and basking sharks.

Field Guide to Sharks, Rays & Chimaeras of Europe and the Mediterranean

This handbook provides guidance on methods for use in fish ageing studies. Fish age, among other biological parameters, is one of the most relevant pieces of data to attain sustainable exploitation levels of fishery resources. Indeed, most analytical methods used in stock assessment require knowledge of demographic structure according to age of stocks, as well as to recruitment, growth, maturity, natural mortality, etc., which are strictly linked to information on age and age structure. The handbook was put

together to deal with identified gaps – which affect both the precision and the accuracy of estimations – regarding ageing schemes, criteria and methodologies used in preparing calcified structures. It focuses on the general principles that underpin age analysis (assignment of birth date, preparation methods, aging scheme reading and identification of true and false rings). Crucially, it aims to contribute to the establishment of common analysis methods, which can enable better calibration across the diverse institutes involved, thereby improving the quality and reliability of results.

Identification Guide to the Deep-sea Cartilaginous Fishes of the Southeastern Atlantic Ocean

The first complete survey of all marine fish species from the North Sea, Baltic Sea and Irish Sea. European research focuses on commercially interesting marine fish. This atlas presents the current data of all Western European species in the period 1977 to 2013.--

Collins Guide to the Sea Fishes of Britain and North-Western Europe

What kind of dory have you caught? At what depth and where on the continental shelf are trevally most likely to be caught? What other fish are these most likely to be confused with? This book is the result of research and observation of fishes most commonly caught (and sometimes confused) by commercial and recreational fishers. Jorge Hirt-Chabbert provides a user-friendly guide that makes the process of identifying your catch simple. Visual clues are the paramount guide to naming your fish, with technical information about the species kept to a minimum. Each entry includes facts that will enhance your knowledge of a species such as spawning times, average length and weight, and physical features unique to a species. Fish Species of New Zealand is a book for all fishers, whether beginner or expert. It can be used as a guide to a focused species catch, or as a reference to find out what's been caught while fishing from a dinghy.

Fishes of the North-eastern Atlantic and the Mediterranean

This comprehensive guide covers all 216 known marine fish species from the British Channel Islands. As well as being a useful guide for local naturalists and angling enthusiasts, this book will be of interest to marine biologists, historians and fishery managers in the English Channel and other parts of Europe.

Fish of Britain & Europe

This guide presents the egg and larval descriptions of 150 species of fishes belonging to 57 families, which are most likely to be present in plankton samples collected in the continental shelf and oceanic waters off northwest Africa. The guide is structured in two parts. The first introductory part describes the different applications of ichthyoplankton studies in fisheries research and management, and fish population ecology, the main sampling strategies, methods and gears, and the problems related to sample representativeness. It also describes the early life history of fishes, and how to identify them. A brief description of the hydrography of the study area is also presented. The second part of the guide features the species identification sheets. Each species sheet includes the following information: an illustration of the adult fish and information on its distribution, habitat, spawning season, and meristic characters; a description of the main features useful towards identifying the egg, yolk-sac and larval stages; and illustrations and photos of different larval stages. Finally, the guide provides a comprehensive list of references.

Identifying the Unknown Bacteria - Identifying the Unknown Bacteria by gregpryorhomestead 748 views 3 years ago 1 minute, 58 seconds - Okay to **identify**, our unknown **bacteria**, we look in this big book burgees **manual**, of determinative bacteriology and this is divided ...

BIOL215 Lab 4 Biochemical Testing of the Unknown Bacteria - BIOL215 Lab 4 Biochemical Testing of the Unknown Bacteria by gregpryorhomestead 1,714 views 3 years ago 7 minutes, 32 seconds - Okay to test the biochemical properties of our **bacteria**, from our phone I'm going to transfer some from the Petri plate into glucose ...

GRAM POSITIVE VS GRAM NEGATIVE BACTERIA - GRAM POSITIVE VS GRAM NEGATIVE BACTERIA by Neural Academy 2,885,462 views 5 years ago 3 minutes, 10 seconds - Bacteria, have cell walls made up of polysaccharides that give them strength and rigidity. This is important since **bacteria**, often ...

How many layers does Gram positive have?
Is gram negative purple or pink?

Identification of bacteria using biochemical tests (2 of 2) - Identification of bacteria using biochemical tests (2 of 2) by Microbiology teaching videos: University of Galway 13,709 views 4 years ago 7 minutes, 52 seconds - Welcome to our suite of NUI Galway Microbiology teaching videos. We hope that they will **guide**, you in performing your ...

Biochemical Tests for Bacterial Identification (Part-1)_TSI, MIU, MR-VP, Lysin, Urea, Citrate - Biochemical Tests for Bacterial Identification (Part-1)_TSI, MIU, MR-VP, Lysin, Urea, Citrate by MicroChem's Experiments 99,677 views 3 years ago 13 minutes, 44 seconds - Biochemical tests are very conventional & popular method for the detection and confirmation of **bacteria**, after isolation from any ...

Intro
BIOCHEMICAL TESTS FOR MR Reaction
BIOCHEMICAL TESTS FOR VP Reaction
BIOCHEMICAL TESTS FOR TSI Test
BIOCHEMICAL TESTS FOR Lysin Decarboxylation
BIOCHEMICAL TEST RESULT OF TSI Test

Identification of bacteria | biochemical tests for identification of bacteria pathogens - Identification of bacteria | biochemical tests for identification of bacteria pathogens by Monu Tutorials Academy 41,404 views 3 years ago 13 minutes, 12 seconds - hello everyone welcome to Monu tutorial academy. today our topic is **identification**, of **bacteria**, so first we will discuss about ...

Identification of Bacteria through Biochemical Testing - Identification of Bacteria through Biochemical

Testing by Dr. Gary Kaiser 1,722 views 3 years ago 32 minutes - Lab 8: Using Biochemical Testing to **Identify Bacteria**, Voice over of my BIOL 230 (Microbiology) Lab **Manual**, Gary E. Kaiser, Ph.D., ...

- General Concepts
- Biochemical Testing
- Exo Enzymes and Endo Enzymes
- Endo Enzymes
- Starch Hydrolysis
- Starch Agar
- Starch Indicator
- Part B Deals with Protein Hydrolysis
- Test for Fermentation End Products
- Ph Indicator
- Auger Plate Cultures of Bacillus Subtlest as Shrieky Coli and Staphylococcus Aureus
- End Products of Metabolism
- Hydrogen Sulfide Production
- Catalase Activity
- Catalase Test
- Performance Objectives

Enterobacteriaceae - Enterobacteriaceae by Maureen Richards Immunology & Microbiology 137,931 views 5 years ago 17 minutes - So how do we detect the intera **bacteria**, well serologic **identification**, is actually really important for our detection of the majority of ...

Antibiotic Sensitivity testing - Antibiotic Sensitivity testing by Biomedical Science 166,289 views 8 years ago 1 minute, 26 seconds - This video was prepared by the Teaching Support team for The University of Western Australia's School of Pathology and ...

Bacterial Structure and Functions - Bacterial Structure and Functions by Osmosis from Elsevier 809,016 views 3 years ago 6 minutes, 59 seconds - Join millions of current and future clinicians who learn by Osmosis, along with hundreds of universities around the world who ...
