Indigenous Knowledge and the Integration of Knowledge Systems

This book explores the role of the social and natural sciences in supporting the development of indigenous knowledge systems. It looks at how indigenous knowledge systems can impact on the transformation of knowledge generating institutions such as scientific and higher education institutions on the one hand, and the policy domain on the other.

Turtles of the World: Annotated Checklist and Atlas of Taxonomy, Synonymy, Distribution, and Conservation Status (9th Ed.)

This book presents recent lessons learned in the context of research and development for various dryland ecosystems, focusing on water resources management, land and vegetation cover degradation and remediation, and socioeconomic aspects, as well as integrated approaches to ensuring water and land security in view of the current and predicted climate change. As water and land are the essential bases of food production, the management of these natural resources is becoming a cornerstone for the development of dryland populations. The book gathers the peer-reviewed, revised versions of the most outstanding papers on these topics presented at the ILDAC2015 Conference in Djerba, Tunisia.

Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early 1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recen

The Tradescants

"There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"--

How to Read Architecture is based on the fundamental premise that reading and interpreting architecture is something we already do, and that close observation matters. This book enhances this skill so that given an unfamiliar building, you will have the tools to understand it and to be inspired by it. Author Paulette Singley encourages you to misread, closely read, conventionally read, and unconventionally read architecture to stimulate your creative process. This book explores three essential ways to help you understand architecture: reading a building from the outside-in, from the inside-out, and from the position of out-and-out, or formal, architecture. This book erodes boundaries between the frequently

compartmentalized fields of interior design, landscape design, and building design with chapters exploring concepts of terroir, scenography, criticality, atmosphere, tectonics, inhabitation, type, form, and enclosure. Using examples and case studies that span a wide range of historical and global precedents, Singley addresses the complex interaction among the ways a building engages its context, addresses its performative exigencies, and operates as an autonomous aesthetic object. Including over 300 images, this book is an essential read for both undergraduate and postgraduate students of architecture with a global focus on the interpretation of buildings in their context.

Proceedings of the Second International Workshop on Standardization of Methods for the Mycological Examination of Foods, held at Baarn, The Netherlands, August, 1990. Nine collaborative studies and forty articles focus mainly on the development of better methods for the detection and enumeration of fungi in foods. Includes: sections on xerophilic, heat resistant and mycotoxigenic fungi, and immunological and alternative techniques for detection of fungi; a summary of recommendations for methods to be adopted that were prepared and agreed upon at the workshop; a review of mycological methods and media currently considered to be the most satisfactory available. Vol III The COLOSS BEEBOOK, Vol III Standard methods for Apis mellifera hive product research - Vincent Dietemann, Peter Neumann, Norman L. Carreck & James D. Ellis (Eds) The COLOSS (Prevention of honey bee COLony LOSSes) BEEBOOK is a unique venture that aims to standardise methods for studying the honey bee. It is a practical manual intended for scientists, extension specialists and beekeepers, compiling standard methods in all fields of research on the honey bee, Apis mellifera. Since the original publication of the first two volumes in 2013, the BEEBOOK has become the definitive bee research manual, and the original papers have been downloaded some 180,000 times and cited in more than 2,300 scientific papers. The hard copy volumes have proved invaluable at the laboratory bench. The new Volume III contains seven peer-reviewed chapters written by 125 authors from 23 countries which cover the major honey bee hive products: royal jelly, beeswax, propolis, brood, honey, venom and pollen. These cover not only the use of these products by the bees themselves, but also their use as human food, and their growing use in human medicine. ÿ

The Golden Bough; A Study in Comparative Religion; Volume II

The year 2009 will mark the bicentennial of Charles Darwin's birth and the 150th anniversary of the publication of *The Origin of Species*. From 1840 to his death in 1882, Darwin was constantly plagued by chronic illnesses that allowed him to work only a few hours at a time and by an obsession with his physical health. Was this the psychosomatic product of stress resulting from the development and public reception to his theory of evolution or the result of a disease or parasite obtained during the world traveler's excursions? In 1977 Ralph Colp Jr. argued persuasively for the former explanation in his book *To Be an Invalid: The Illness of Charles Darwin*, now out of print, but considered to be one of the century's most important works on Darwin's life. Expanding and reworking his earlier arguments to take into account new information (including Darwin's "Diary of Health," included as an appendix), Darwin's Illness paints a more intimate portrait of the nature and possible causes of Darwin's lifelong illness, of the ways he and Victorian physicians tried treating it, and how it influenced his scientific work and relations with his family and friends.

The Episodes of Vathek

"Ramón Medina Silva, a Huichol Indian shaman priest or mara'akame, instructed me in many of his culture's myths, rituals, and symbols, particularly those pertaining to the sacred unity of deer, maize, and peyote. The significance of this constellation of symbols was revealed to me most vividly when I accompanied Ramón on the Huichol's annual ritual return to hunt the peyote in the sacred land of Wirikuta, in myth and probably in history the place from which the Ancient Ones (ancestors and deities of the present-day Indians) came before settling in their present home in the mountains of the Sierra Madre Occidental in north-central Mexico. My work with Ramón preceded and followed our journey, but it was this peyote hunt that held the key to, and constituted the climax of, his teachings." --from the Preface

This volume provides a comprehensive overview of the hazards inherent in herbal medicinal products, with systematic coverage of major toxicities. Topics include composition and quality control, toxicokinetics, interactions, safety pharmacology, approaches to studying complex mixtures including metabolomics and systems network pharmacology, and long-term toxicity. The volume also discusses various organ toxicities with a special emphasis on basic mechanisms of actions and the multicomponent and multi-target nature of herbal products. It concludes with a look to future challenges and opportunities. With contributions from noted experts, *Toxicology of Herbal Products* is a necessary resource for physicians, pharmacists, and toxicologists interested in complex plant-derived products.

COLOSS BEEBOOK - Volume III

Fuzzy Logic is a good model for the human ability to compute words. It is based on the theory of fuzzy set. A fuzzy set is different from a classical set because it breaks the Law of the Excluded Middle. In fact, an item may belong to a fuzzy set and its complement at the same time and with the same or different degree of membership. The degree of membership of an item in a fuzzy set can be any real number included between 0 and 1. This property enables us to deal with all those statements of which truths are a matter of degree. Fuzzy logic plays a relevant role in the field of Artificial Intelligence because it enables decision-making in complex situations, where there are many intertwined variables involved. Traditionally, fuzzy logic is implemented through software on a computer or, even better, through analog electronic circuits. Recently, the idea of using molecules and chemical reactions to process fuzzy logic has been promoted. In fact, the molecular word is fuzzy in its essence. The overlapping of quantum states, on the one hand, and the conformational heterogeneity of large molecules, on the other, enable context-specific functions to emerge in response to changing environmental conditions. Moreover, analog input-output relationships, involving not only electrical but also other physical and chemical variables can be exploited to build fuzzy logic systems. The development of "fuzzy chemical systems" is tracing a new path in the field of artificial intelligence. This new path shows that artificially intelligent systems can be implemented not only through software and electronic circuits but also through solutions of properly chosen chemical compounds. The design of chemical artificial intelligent systems and chemical robots promises to have a significant impact on science, medicine, economy, security, and wellbeing. Therefore, it is my great pleasure to announce a Special Issue of Molecules entitled "The Fuzziness in Molecular, Supramolecular, and Systems Chemistry." All researchers who experience the Fuzziness of the molecular world or use Fuzzy logic to understand Chemical Complex Systems will be interested in this book.
