Intro

different species have different numbers of chromosomes

sister chromatids are attached at something called the centromere

sister chromatids separate during cell division (mitosis)

Stages of the Cell Cycle M Phase (mitotic phase) the cell is dividing

What controls the cell cycle?

the cell cycle is regulated on the molecular level

Cell Cycle Signaling Molecules

phosphorylation the transfer of a phosphate group between molecules

cyclin-dependent kinase (CDK)

the kinases return to an inactive state until the next time around the cell cycle

The Cell Cycle Control System ensures chromosomes are attached to spindles

density-dependent inhibition relies on contact between surface proteins of adjacent cells
