[#david p barash](#) [#evolutionary psychology](#) [#peace research](#) [#human nature author](#) [#barash books](#)

David P. Barash is a distinguished evolutionary psychologist, author, and peace researcher whose prolific work explores the intricacies of human nature, evolutionary biology, and the critical analysis of conflict and peace, offering profound insights into our species' behavioral patterns and potential for cooperation.

We encourage scholars to reference these dissertations responsibly and ethically.

Thank you for stopping by our website.

We are glad to provide the document David P Barash you are looking for.

Free access is available to make it convenient for you.

Each document we share is authentic and reliable.

You can use it without hesitation as we verify all content.

Transparency is one of our main commitments.

Make our website your go-to source for references.

We will continue to bring you more valuable materials.

Thank you for placing your trust in us.

This document is one of the most sought-after resources in digital libraries across the internet.

You are fortunate to have found it here.

We provide you with the full version of David P Barash completely free of charge.

Buddhist Biology

Compares teachings of Buddhism with principles of modern biology, revealing many significant points of compatibility.

Introduction to Peace Studies

Thoroughly revised, the Second Edition of Peace and Conflict Studies sets the new gold standard as an accessible introduction and comprehensive exploration of this vital subject. The authors share their vast knowledge and analysis about 21st-century world events – including new coverage on timely topics such as terrorism, the truth and reconciliation process, and the clash of civilizations. With an encyclopedic scope, this introductory text chronicles a plethora of important global topics from pre-history to the present. Key Features of the Second Edition Includes updated chapters and examines current conflicts, including the Iraq War Explores the important aspects of positive peace, individual violence, nationalism, and terrorism Provides numerous visual aids, questions for further study, and suggested readings Furnishes a comprehensive range of material to enlighten and enrich future discussion and encourage further academic pursuit Intended Audience This text is invaluable for students and professors in peace and or conflict studies, psychology and or the sociology of peace and conflict studies, international relations, comparative politics, history, and others interested in gaining a solid foundation about the global arena. Praise for the First Edition "Barash and Webel have penned a masterpiece that should appeal to seasoned scholars of peace and conflict studies as well as to others who have little knowledge of this multidisciplinary field." --Daniel J. Christie, Ohio State University

Peace and Conflict Studies

"Human beings are important, especially to themselves! But as science advances, it has become increasingly clear that we are less special and more natural than many people have long believed. This book shows how, as we finally look at ourselves honestly and accurately, we can identify ourselves as wonderfully natural, inseparable from the universe and other living things"--

Through a Glass Brightly

Approaches to Peace provides a unique and interdisciplinary sampling of classic articles and short literary selections focusing on the diverse aspects of peace and conflict studies. Readings cover the causes of war and proposed means of preventing it and reflect upon the universal concern for positive peace. The material examines nonviolence movements, peace movements, religious inspirations, and our future prospects for peace. The book's balanced and unbiased approach make it easily adaptable to both general discussions of peace and conflict as well as the rapidly changing issues of the moment. *Approaches to Peace* is able to stand on its own as a foundation text in any introductory peace studies course. It is also compact enough to use as a supplement with other more specialized readings, or used in conjunction with a text. Each selection is prefaced by a short introduction highlighting the author's background, the work's historical context, and the selection's significance in terms of the "big picture." Study questions and a list of suggested readings at the end of each selection also provide a useful resource for students.

Approaches to Peace

The thoroughly updated Fourth Edition of the gold standard text explores historical and current topics in today's rapidly changing world to provide a comprehensive introduction to peace and conflict studies. The authors offer an insightful analysis of 21st-century global affairs, including such timely topics as ISIS, the nature of violence and nonviolence, cutting-edge military technologies, the Terrorism and Global Peace Indexes, and the latest developments in Iran, North Korea, and Syria. Comprehensive yet written in a student-friendly and accessible style, the text represents a commitment to inspire readers to create a better world through an understanding of what has happened and what is happening, and therefore what is likely to take place in the future. Read Dr. Barash's article on *Psychology Today* on why nuclear threats by the U.S. Government are never a successful defense tactic.

Peace and Conflict Studies

For all that science knows about the living world, there are even more things that we don't know. They include such questions as why do women experience orgasm, menstruation and menopause, why do men have a shorter lifespan than women, and why does homosexuality exist? This book explores some of these mysteries.

Homo Mysterious

"It's a rare author who can combine literary erudition and an easy fluency of style together with expert knowledge of psychology and evolutionary biology. David Barash adds to all this a far-seeing wisdom and a humane decency that shines through on every page. The concluding section on the senseless and dangerous futility of nuclear deterrence theory is an irrefutable tour de force which should be read by every politician and senior military officer. If only!" -- Richard Dawkins From hurricanes and avalanches to diseases and car crashes, threats are everywhere. Beyond objective threats like these, there are also subjective ones: situations in which individuals threaten each other or feel threatened by society. Animals, too, make substantial use of threats. Evolution manipulates threats like these in surprising ways, leading us to question the ethics of honest versus dishonest communication. Rarely acknowledged--and yet crucially important--is the fact that humans, animals, and even plants don't only employ threats, they often respond with counter-threats that ultimately make things worse. By exploring the dynamic of threat and counter-threat, this book expands on many fraught human situations, including the fear of death, of strangers, and of "the other." Each of these leads to unique challenges, such as the specter of eternal damnation, the murderous culture of guns and capital punishment, and the emergence of right-wing nationalist populism. Most worrisome is the illusory security of deterrence, the idea that we can use the threat of nuclear war to prevent nuclear war! Threats are so widespread that we often don't realize how deeply they are ingrained in our minds or how profoundly and counter-productively they operate. Animals, humans, societies, and even countries

internalize threats, behind which lie a myriad of intriguing questions: How do we know when to take a threat seriously? When do threats make things worse? Can they make things better? What can we do to use them wisely rather than destructively? In a comprehensive exploration into questions like these, noted scientist David P. Barash explains some of the most important characteristics of life as we know it.

Threats

In this changing world of what is deemed socially and politically "correct," polygamy is perhaps the last great taboo. Over the course of the last thousand years, monogamy - at least in name - has been the default setting for coupledness and procreation. And yet, throughout history, there have been inklings that "one-man, one-woman" may not be the most natural state-of-being for humans. The recent Ashley Madison "cheaters website" hacking, coupled with the high divorce rate of the last half-century, provide more than enough evidence to convince even a hopeless romantic that monogamy, and the institution of marriage which props it up, is doomed to be a bygone remnant of a more socially conservative past. Esteemed writer and evolutionary biologist David P. Barash tackles this uncomfortable finding: that humans are actually biologically and anthropologically more inclined toward polygamy. With years of research in the field to back up this argument, Barash presents hundreds of anecdotes from both evolutionary biology and human history that guide the reader through the societal impacts of monogamy and polygamy - some expected (sexual behavior) and others unexpected (the most successful models of parenting). Despite this natural inclination of humanity, Barash is reassuring throughout this fascinating read in his resolution that "biology is not destiny."

Out of Eden

"Human beings are important, especially to themselves! But as science advances, it has become increasingly clear that we are less special and more natural than many people have long believed. This book shows how, as we finally look at ourselves honestly and accurately, we can identify ourselves as wonderfully natural, inseparable from the universe and other living things"--

The Whisperings Within

Barash and Lipton discuss the theories scientists have advanced to explain evolutionary enigmas--from how women get their curves to why women menstruate--and present hypotheses of their own.

Through a Glass Brightly

Understanding Violence provides an interdisciplinary sampling of readings geared toward deconstructing violence using a scholarly approach. Drawing from key contributors across such fields as psychology, criminology, sociology, anthropology, biology, and political science, this text provides a core curriculum in the subject as a whole what every student should know, regardless of specialization. However, the readings are concise enough that professors could use the book as a supplement to additional material in their preferred discipline.

How Women Got Their Curves and Other Just-so Stories

From a zoologist and psychologist, an astonishing look at the biological and strategic roots of human decisions. Humans, like bacteria, woodchucks, chimpanzees, and other animals, compete or cooperate in order to get food, shelter, territory, and other resources to survive. But how do they decide whether to muscle out or team up with the competition? In *The Survival Game*, David P. Barash synthesizes the newest ideas from psychology, economics, and biology to explore and explain the roots of human strategy. Drawing on game theory--the study of how individuals make decisions--he explores the give-and-take of spouses in determining an evening's plans, the behavior of investors in a market bubble, and the maneuvers of generals on a battlefield alongside the mating and fighting strategies of "less rational" animals. Ultimately, Barash's lively and clear examples shed light on what makes our decisions human, and what we can glean from game theory and the natural world as we negotiate and compete every day.

Understanding Violence

Let's face it, say Barash and Lipton: Males and females, boys and girls, men and women are different. To be sure, these differences are often heightened by distinctions in learning, cultural tradition, and

social expectation, but underpinning them all is a fundamental difference that derives from biology. Throughout the natural world, males are those creatures that make sperm; females make eggs. The oft-noticed "gender gap" derives, in turn, from this "gamete gap." In *Gender Gap*, Barash and Lipton (husband and wife, professor and physician, biologist and psychiatrist) explain the evolutionary aspects of male-female differences.

The Survival Game

Applying new research to sex in the animal world, the authors dispel the notion that monogamy comes naturally. As "The Myth of Monogamy" reveals, biologists have discovered that for nearly every species, cheating is the rule--for both sexes.

The Arms Race and Nuclear War

Approaches to Peace: A Reader in Peace Studies, Third Edition, provides a unique and interdisciplinary sampling of key articles and literary selections focusing on the diverse facets of peace and conflict studies. Featuring both classic and contemporary work, it enables students to read highly influential articles while also introducing them to the most current perspectives in the field. Timeless classics from Leo Tolstoy, Martin Luther King, Jr., Gandhi, and Henry David Thoreau are included alongside contemporary pieces. Updated to address current concerns, the third edition incorporates fourteen new readings. Ideal on its own as a foundation text in any introductory peace studies course, *Approaches to Peace, Third Edition*, is also compact enough to use as a supplement with more specialized readings. Each selection is prefaced by a short introduction highlighting the author's background, the work's historical context, and the selection's significance in terms of the "big picture." Study questions and a list of suggested readings at the end of each selection also provide useful resources for students.

Gender Gap

Do the fractious groups of Arabs and Israelis actually need each other? Can the Pentagon find new enemies to replace the USSR? Are married couples held together by a shared sense of enmity toward outside parties and even each other? Who is more likely to cultivate enemies - men or women? Is the "devil" a created enemy? Is the need for enemies psychological, sociological, or biological? These and other fascinating questions are explored by David P. Barash as he skillfully combines findings from biology, psychology, sociology, politics, history, and even literature to shed new and unexpected light on the human condition. Barash also offers startling and controversial observations about who we are as human beings and why we seem to thrive on adversarial relationships. He argues that we create and perpetuate our "enemy system" by "passing the pain along" - from child abuse to ethnic antagonism. We may well harbor a vestigial "Neanderthal mentality," which induces us to behave in ways that were adaptive in our evolutionary past but which have broad and even global implications today. *Beloved Enemies* concludes with a hopeful message: We can overcome, not simply our enemies, but our need to have enemies, and our penchant for creating them. To those who seek a better understanding of the nature of conflict and to those who remain confident that we can find answers to seemingly endless and complex antagonisms, *Beloved Enemies* offers much food for thought.

The Myth of Monogamy

A husband and wife team make the science of monogamy sexy.

Approaches to Peace: A Reader in Peace Studies

In this book, based on over twenty years of study around the world, the author summarizes and synthesizes virtually everything that is known of the social behaviour and ecology of marmots. The organizing principle of the author's approach is evolution by natural selection - and thus, the degree to which the social behaviour of free-living animals can be interpreted as representing adaptations to particular environmental conditions. This book is essentially a single, widespread genus (genus *Marmota* comprising fourteen species found in North America and Eurasia. As such, it represents a productive union of theoretical insights from Darwinism and modern sociobiology, accompanied by a wealth of empirical data. Marmots are notable in that they constitute a relatively homogeneous group, made up of numerous species which greatly resemble each other. However, they occupy widely varying habitats - from temperate, lowland elevations to (more often) alpine meadows - and theory would predict behavioural adaptations to match their habitats.

The Hare and the Tortoise

Peace and Conflict Studies Third Edition, sets the standard for an accessible introduction and comprehensive exploration of this vital subject. The authors share their vast knowledge and analysis of 21st-century world events. Including new chapters on research methods and democracy, as well as timely topics such as: nuclear proliferation; models of conflict analysis, outcomes, and solutions; the Non-Proliferation Treaty; the rise of the BRICs countries; and much more. With an broad and authoritative scope, this introductory text chronicles a plethora of important global topics from pre-history to the present. Key Features - Includes updated chapters and examines current conflicts, including the latest developments in Iran and North Korea - Explores the important aspects of positive peace, individual violence, nationalism, and terrorism - Provides numerous visual aids, questions for further study, and suggested readings - Furnishes a comprehensive range of material to enlighten and enrich future discussion and encourage further academic pursuit

Sociobiology and Behavior

From the child taunted by her playmates to the office worker who feels stifled in his daily routine, people frequently take out their pain and anger on others, even those who had nothing to do with the original stress. The bullied child may kick her puppy, the stifled worker yells at his children: Payback can be directed anywhere, sometimes at inanimate things, animals, or other people. In Payback, the husband-and wife team of evolutionary biologist David Barash and psychiatrist Judith Lipton offer an illuminating look at this phenomenon, showing how it has evolved, why it occurs, and what we can do about it. Retaliation and revenge are well known to most people. We all know what it is like to want to get even, get justice, or take revenge. What is new in this book is an extended discussion of redirected aggression, which occurs not only in people but other species as well. The authors reveal that it's not just a matter of yelling at your spouse "because" your boss yells at you. Indeed, the phenomenon of redirected aggression--so-called to differentiate it from retaliation and revenge, the other main forms of payback--haunts our criminal courts, our streets, our battlefields, our homes, and our hearts. It lurks behind some of the nastiest and seemingly inexplicable things that otherwise decent people do, from road rage to yelling at a crying baby. And it exists across boundaries of every kind--culture, time, geography, and even species. Indeed, it's not just a human phenomenon. Passing pain to others can be seen in birds and horses, fish and primates--in virtually all vertebrates. It turns out that there is robust neurobiological hardware and software promoting redirected aggression, as well as evolutionary underpinnings. Payback may be natural, the authors conclude, but we are capable of rising above it, without sacrificing self-esteem and social status. They show how the various human responses to pain and suffering can be managed--mindfully, carefully, and humanely.

Beloved Enemies

Unique in both scope and organization, this book presents an intriguing yet challenging introduction to the world's great ideas concerning the nature of human nature -- with a sampling of different approaches. The selections are drawn from religious writings, academic treatises, nonfiction, fiction, etc. -- enabling readers to encounter the great thinkers through their own words. Organizes selections into intellectually coherent topics-- Religious/Mythic Views, The Mind, The Social Setting, The Human Animal? -- and then subtopics -- e.g., The Role of Reason, The Limits of Reason, People Are Basically Nasty, People Are Basically Good, Animals as "Human," and Vice Versa, Sex and Gender, etc.

Strange Bedfellows

Draws on the principles of evolutionary biology to provide fresh insights into the world of literature to explain why certain literary works have had a profound influence on human life, arguing that the behavior of icons of literature reveals a universal human nature that has evolved over millions of years of natural selection. Reprint.

Marmots

There is a revolution underway in biology. It is based on a new perception of bodies and genes, in which the former are the end product of the latter within the continuum of evolution. Twenty five years after Richard Dawkins helped revolutionize our thinking about "selfish genes," it is time to reevaluate. Revolutionary Biology explains in simple, vivid terms what this exciting approach has to offer, and then applies its stunning insights to human beings. This novel perspective, galvanizes our understanding of how evolution works, what living things are all about and, not least, what it means to be human. The controversial disciplines of sociobiology and evolutionary psychology have generated startling insights

into longstanding questions concerning the nature and purpose of families, altruism vs. selfishness, and free will vs. biological determinism. Written by one of its foremost figures, *Revolutionary Biology* is a manifesto and educated layman's guide to this ongoing revolution.

Peace and Conflict Studies

"It's a rare author who can combine literary erudition and an easy fluency of style together with expert knowledge of psychology and evolutionary biology. David Barash adds to all this a far-seeing wisdom and a humane decency that shines through on every page. The concluding section on the senseless and dangerous futility of nuclear deterrence theory is an irrefutable tour de force which should be read by every politician and senior military officer. If only!" -- Richard Dawkins

From hurricanes and avalanches to diseases and car crashes, threats are everywhere. Beyond objective threats like these, there are also subjective ones: situations in which individuals threaten each other or feel threatened by society. Animals, too, make substantial use of threats. Evolution manipulates threats like these in surprising ways, leading us to question the ethics of honest versus dishonest communication. Rarely acknowledged--and yet crucially important--is the fact that humans, animals, and even plants don't only employ threats, they often respond with counter-threats that ultimately make things worse. By exploring the dynamic of threat and counter-threat, this book expands on many fraught human situations, including the fear of death, of strangers, and of "the other." Each of these leads to unique challenges, such as the specter of eternal damnation, the murderous culture of guns and capital punishment, and the emergence of right-wing nationalist populism. Most worrisome is the illusory security of deterrence, the idea that we can use the threat of nuclear war to prevent nuclear war! In a comprehensive exploration into questions like these, noted scientist David P. Barash explains some of the most important characteristics of life as we know it.

Payback

Costa Rica is the only full-fledged and totally independent country to be entirely demilitarized. Its military was abolished in 1948, with the keys to the armory handed to the Department of Education. Socially, Costa Rica is a success story. Although 94th in the world for GDP, it is in the top 10 on various measurements of health and well-being. Citizens enjoy high standards of living that include universal access to healthcare, education, and pensions. In addition, the country practices sustainable resource management, such as reforestation and the development of solar and wind power, and it expects to be carbon neutral by 2020. Hunting is illegal. 25% of the landmass is parks and reserves. The government supports universal health care, especially maternal and child health. Costa Rica even has a Blue Zone, an area where people live extraordinarily long, healthy lives. To some extent, Costa Rica is simply lucky: it was largely inaccessible, and it had virtually no precious minerals, therefore it was mostly spared the ravages of predatory colonialism. The Costa Rican people made very good social decisions, ranging from an avowed commitment to social democracy at the national level, to local land distribution to develop stable middle class farmers. But Costa Rica's neighbors have not enjoyed nearly as much peace and prosperity. It is unlikely that Costa Rica's demilitarization and its remarkable social success are coincidental; clearly, something special is going on. Through good luck, good leadership, and good decisions, Costa Rica has become arguably the sanest and most progressive country on earth. This book examines how and why Costa Rica is safe and independent without any military at all, and what the rest of us can learn from its success.

Ideas of Human Nature

Women's physiology evolved to aid reproduction, not to reduce disease. Any trait—however detrimental to post-reproductive health—is preserved in the next generation if it increases the chances of having offspring who will survive and reproduce. For this reason, the author argues, many common diseases are especially difficult for women to prevent.

Madame Bovary's Ovaries

Presents an entertaining and engaging look at some of nature's most remarkable creatures ... Shows not only how studying these animals can provide deep insights into how life evolved, but also how scientific discovery can be filled with adventure and fun--Adapted from cover.

Revolutionary Biology

A leading scholar explores what it means to dehumanize others—and how and why we do it. “I wouldn’t have accepted that they were human beings. You would see an infant who’s just learning to smile, and it smiles at you, but you still kill it.” So a Hutu man explained to an incredulous researcher, when asked to recall how he felt slaughtering Tutsis in Rwanda in 1994. Such statements are shocking, yet we recognize them; we hear their echoes in accounts of genocides, massacres, and pogroms throughout history. How do some people come to believe that their enemies are monsters, and therefore easy to kill? In *Making Monsters* David Livingstone Smith offers a poignant meditation on the philosophical and psychological roots of dehumanization. Drawing on harrowing accounts of lynchings, Smith establishes what dehumanization is and what it isn’t. When we dehumanize our enemy, we hold two incongruous beliefs at the same time: we believe our enemy is at once subhuman and fully human. To call someone a monster, then, is not merely a resort to metaphor—dehumanization really does happen in our minds. Turning to an abundance of historical examples, Smith explores the relationship between dehumanization and racism, the psychology of hierarchy, what it means to regard others as human beings, and why dehumanizing others transforms them into something so terrifying that they must be destroyed. Meticulous but highly readable, *Making Monsters* suggests that the process of dehumanization is deeply seated in our psychology. It is precisely because we are all human that we are vulnerable to the manipulations of those trading in the politics of demonization and violence.

Threats

Do the fractious groups of Arabs and Israelis actually need each other? Can the Pentagon find new enemies to replace the USSR? Are married couples held together by a shared sense of enmity toward outside parties and even each other? Who is more likely to cultivate enemies - men or women? Is the "devil" a created enemy? Is the need for enemies psychological, sociological, or biological? These and other fascinating questions are explored by David P. Barash as he skillfully combines findings from biology, psychology, sociology, politics, history, and even literature to shed new and unexpected light on the human condition. Barash also offers startling and controversial observations about who we are as human beings and why we seem to thrive on adversarial relationships. He argues that we create and perpetuate our "enemy system" by "passing the pain along" - from child abuse to ethnic antagonism. We may well harbor a vestigial "Neanderthal mentality," which induces us to behave in ways that were adaptive in our evolutionary past but which have broad and even global implications today. *Beloved Enemies* concludes with a hopeful message: We can overcome, not simply our enemies, but our need to have enemies, and our penchant for creating them. To those who seek a better understanding of the nature of conflict and to those who remain confident that we can find answers to seemingly endless and complex antagonisms, *Beloved Enemies* offers much food for thought.

Strength Through Peace

'A passionate defence of the enduring power of human nature ... both life-affirming and deeply satisfying' *Daily Telegraph* Recently many people have assumed that we are blank slates shaped by our environment. But this denies the heart of our being: human nature. Violence is not just a product of society; male and female minds are different; the genes we give our children shape them more than our parenting practices. To acknowledge our innate abilities, Pinker shows, is not to condone inequality, but to understand the very foundations of humanity. 'Brilliant ... enjoyable, informative, clear, humane' *New Scientist* 'If you think the nature-nurture debate has been resolved, you are wrong ... this book is required reading' *Literary Review* 'An original and vital contribution to science and also a rattling good read' *Matt Ridley, Sunday Telegraph* 'Startling ... This is a breath of air for a topic that has been politicized for too long' *Economist*

The Fragile Wisdom

Winner of the William James Book Award “Magisterial...Makes an impressive argument that most distinctly human traits are established early in childhood and that the general chronology in which these traits appear can at least—and at last—be identified.” —*Wall Street Journal* “Theoretically daring and experimentally ingenious, *Becoming Human* squarely tackles the abiding question of what makes us

human.” —Susan Gelman, University of Michigan Virtually all theories of how humans have become such a distinctive species focus on evolution. *Becoming Human* proposes a complementary theory of human uniqueness, focused on development. Building on the seminal ideas of Vygotsky, it explains how those things that make us most human are constructed during the first years of a child's life. In this groundbreaking work, Michael Tomasello draws from three decades of experimental research with chimpanzees, bonobos, and children to propose a new framework for psychological growth between birth and seven years of age. He identifies eight pathways that differentiate humans from their primate relatives: social cognition, communication, cultural learning, cooperative thinking, collaboration, prosociality, social norms, and moral identity. In each of these, great apes possess rudimentary abilities, but the maturation of humans' evolved capacities for shared intentionality transform these abilities into uniquely human cognition and sociality.

Sociobiology

Engineering Ethics: Challenges and Opportunities aims to set a new agenda for the engineering profession by developing a key challenge: can the great technical innovation of engineering be matched by a corresponding innovation in the acceptance and expression of ethical responsibility? Central features of this stimulating text include: · An analysis of engineering as a technical and ethical practice providing great opportunities for promoting the wellbeing and agency of individuals and communities. · Elucidation of the ethical opportunities of engineering in three key areas: Engineering for Peace, emphasising practical amelioration of the root causes of conflict rather than military solutions. Engineering for Health, focusing on close collaboration with healthcare professionals for both the promotion and restoration of health. Engineering for Development, providing effective solutions for the reduction of extreme poverty. · Innovative strategies for implementing these ethical opportunities are described: Emphasis on the personal responsibility of every engineer and on the benefits of supporting social structures. Use of language and concepts that are appealing to business managers and political decision makers. · Future prospects for increasing the acceptance and expression of ethical responsibility by engineers are envisaged. · *Engineering Ethics: Challenges and Opportunities* provides engineers, decision makers and the wider public with new understanding of the potential of engineering for the promotion of human flourishing.

Great Adaptations

What impels human beings to harm others -- family members or strangers? And how can these impulses and actions be prevented or controlled? Heightened public awareness of, and concern about, what is widely perceived as a recent explosion of violence -- on a spectrum from domestic abuse to street crime -- has motivated behavioral and social scientists to cast new light on old questions. Many hypotheses have been offered. This volume sorts, structures, and evaluates them. The author draws on contemporary research and theory in varied fields--sociology, clinical psychology, psychiatry, social work, neuropsychology, behavioral genetics, child development, and education--to present a uniquely balanced, integrated, and readable summary of what we currently know about the causes and effects of violence. Throughout, she emphasizes the necessity of distinguishing among different types of violent behavior and of realizing that nature and nurture interact in human development. Controversial issues such as physical punishment and violent television programming receive special attention making this volume an important resource for all those concerned with violent offenders and their victims -- and for their students and trainees. In this third edition of *Understanding Violence*, author Elizabeth Kandel Englander draws on contemporary research and theory in varied fields to present a uniquely balanced, integrated, and readable summary of what we currently know about the causes and effects of violence, particularly its effect on children. The goal of this textbook is to give a critical review of the most relevant and important areas of research on street and family violence, examining why it is that people become violent. Between 1994 and 2004 the United States benefited from a dramatic decline in rates of violent crime. However, as the economy has weakened in recent years and tougher times have returned, the crime rate has shown signs of a modest

Making Monsters

From the child taunted by her playmates to the office worker who feels stifled in his daily routine, people frequently take out their pain and anger on others, even those who had nothing to do with the original stress. The bullied child may kick her puppy, the stifled worker yells at his children: Payback can be directed anywhere, sometimes at inanimate things, animals, or other people. In *Payback*, the

husband-and wife team of evolutionary biologist David Barash and psychiatrist Judith Lipton offer an illuminating look at this phenomenon, showing how it has evolved, why it occurs, and what we can do about it. Retaliation and revenge are well known to most people. We all know what it is like to want to get even, get justice, or take revenge. What is new in this book is an extended discussion of redirected aggression, which occurs not only in people but other species as well. The authors reveal that it's not just a matter of yelling at your spouse "because" your boss yells at you. Indeed, the phenomenon of redirected aggression--so-called to differentiate it from retaliation and revenge, the other main forms of payback--haunts our criminal courts, our streets, our battlefields, our homes, and our hearts. It lurks behind some of the nastiest and seemingly inexplicable things that otherwise decent people do, from road rage to yelling at a crying baby. Southwestern Pottery

When this book first appeared in 1996, it was "Pottery 101," a basic introduction to the subject. It served as an art book, a history book, and a reference book, but also fun to read, beautiful to look at, and filled with good humor and good sense. After twenty years of faithful service, it's been expanded and brought up-to-date with photographs of more than 1,600 pots from more than 1,600 years. It shows every pottery-producing group in the Southwest, complete with maps that show where each group lives. Now updated, rewritten, and re-photographed, it's a comprehensive study as well as a basic introduction to the art.

Beauty From the Earth

The major essay by renowned art historian J. J. Brody traces the development of southwestern pottery from the prehistoric Anasazi through modern Pueblo. A section on pottery technology examines the different types of clays and details the pottery-makings process. Rebecca Allen has contributed an essay on the history of the Museum's southwestern collection, providing insights into the personalities of the collectors and the ways their personal tastes affected the contents of their collections. The catalogue includes a compendium of the 104 objects in the exhibition, each accompanied by a photograph.

Fourteen Families in Pueblo Pottery

In 1974 Seven Families in Pueblo Pottery was published to accompany an exhibit at the Maxwell Museum of Anthropology: twenty years later there are some 80,000 copies in print. Like Seven Families, this updated and greatly enlarged version by Rick Dillingham, who curated the original exhibition, includes portraits of the potters, color photographs of their work, and a statement by each potter about the work of his or her family. In addition to the original seven--the Chino and Lewis families (Acoma Pueblo), the Nampeyos (Hopi), the Guteirrez and Tafoya families (Santa Clara), and the Gonzales and Martinez families (San Ildefonso)--the author had added the Chapellas and the Navasies (Hopi-Tewa), the Chavarrias (Santa Clara), the Herrera family (Choti), the Medina family (Zia), and the Tenorio-Pacheco and the Melchor families (Santo Domingo). Because the craft of pottery is handed down from generation to generation among the Pueblo Indians, this extended look at multiple generations provides a fascinating and personal glimpse into how the craft has developed. Also evident are the differences of opinion among the artists about the future of Pueblo pottery and the importance of following tradition. A new generation of potters has come of age since the publication of Seven Families. The addition of their talents, along with an ever-growing interest in Native American pottery, make this book a welcome addition to the literature on the Southwest.

Pottery of the Southwest

Native American pottery of the U.S. southwest has long been considered collectible and today can fetch many thousands of dollars per piece. Authors, collectors, and dealers Carol and Allen Hayes provide readers with a concise overview of the pottery of the southwest, from its origins in the Basketmaker period (around 400 AD) to the Spanish entrada (1540 AD-1879 AD) to today's new masters. Readers will find dozens of color images depicting pottery from the Zuni, Hopi, Anasazi, and many other peoples. Maps help readers identify where these master potters and their peoples lived (i.e. the Pueblo a tribal group or area). Pottery of the Southwest will serve as a useful introduction as well as a lovely guide for enthusiasts.

Southwestern Indian Designs

Treasury of 250 copyright-free images, drawn from authentic motifs on Hopi ceremonial dress, Zuni shields, Anasazi pottery, Navajo jewelry, rugs and sand paintings, Pueblo pottery, and many more. Clearly drawn in detail, easily reproducible, these motifs represent a highly useful resource for a myriad of art and craft projects.

Pottery by American Indian Women

Primarily a women's art, American Indian pottery reflects a heritage of powerful social, religious, and aesthetic values. Even now, modern American Indian women use the clay, paint, and fire of pottery making to express themselves, creating designs that range from dutifully traditional to strikingly original. This book - written in conjunction with one of the most important exhibitions of American Indian pottery ever mounted - provides an in-depth look at a unique North American art form.

Two Zuni Artists

A revelation of how Zuni art, past and present, is an essential expression of Zuni life and heritage. This book places modern work within the context of Pueblo folk art from prehistoric times to the present. Vintage and contemporary photographs show Zuni art and life as it has developed in recent times. 90 photos, 20 in color.

Zuni Origins

The Zuni are a Southwestern people whose origins have long intrigued anthropologists. This volume presents fresh approaches to that question from both anthropological and traditional perspectives, exploring the origins of the tribe and the influences that have affected their way of life. Utilizing macro-regional approaches, it brings together many decades of research in the Zuni and Mogollon areas, incorporating archaeological evidence, environmental data, and linguistic analyses to propose new links among early Southwestern peoples. The findings reported here postulate the differentiation of the Zuni language at least 7,000 to 8,000 years ago, following the initial peopling of the hemisphere, and both formulate and test the hypothesis that many Mogollon populations were Zunian speakers. Some of the contributions situate Zuni within the developmental context of Southwestern societies from Paleoindian to Mogollon. Others test the Mogollon-Zuni hypothesis by searching for contrasts between these and neighboring peoples and tracing these contrasts through macro-regional analyses of environments, sites, pottery, basketry, and rock art. Several studies of late prehistoric and protohistoric settlement systems in the Zuni area then express more cautious views on the Mogollon connection and present insights from Zuni traditional history and cultural geography. Two internationally known scholars then critique the essays, and the editors present a new research design for pursuing the question of Zuni origins. By taking stock and synthesizing what is currently known about the origins of the Zuni language and the development of modern Zuni culture, *Zuni Origins* is the only volume to address this subject with such a breadth of data and interpretations. It will prove invaluable to archaeologists working throughout the North American Southwest as well as to others struggling with issues of ethnicity, migration, incipient agriculture, and linguistic origins.

The Pottery of Zuni Pueblo

One of the few bright spots in the conduct of government toward the native people of North America.

Historic Pottery of the Pueblo Indians, 1600-1880

Working without the use of the potter's wheel, Pueblo Indians in the American Southwest create beautiful ceramic ware for both utilitarian and ceremonial use. A classic, this book is the first comprehensive account of historic Pueblo pottery, and results from years of study. With nearly 200 examples, the authors appraise the aesthetic value of Pueblo pottery as rivaling that of any ware made by Neolithic societies.

Painted by a Distant Hand

Highlighting one of the Peabody Museum's most important archaeological expeditions—the excavation of the Swarts Ranch Ruin in southwestern New Mexico by Harriet and Burton Cosgrove in the mid-1920s—Steven LeBlanc's book features rare, never-before-published examples of Mimbres painted pottery, considered by many scholars to be the most unique of all the ancient art traditions of North America. Made between ad 1000 and 1150, these pottery bowls and jars depict birds, fish, insects, and mammals that the Mimbres encountered in their daily lives, portray mythical beings, and

show humans participating in both ritual and everyday activities. LeBlanc traces the origins of the Mimbres people and what became of them, and he explores our present understanding of what the images mean and what scholars have learned about the Mimbres people in the 75 years since the Cosgroves' expedition.

Art of Clay

The magnificent ceramics shown in this book leave us in no doubt that we are seeing one-of-a-kind-art, not merely pretty 'ethnic artefacts'. Major south-western artists whose works are avidly sought by museums and knowledgeable collectors the world over are represented with full-colour photographs and informative commentary. Most of the works shown are reproduced here for the first time in book form. The ninety-six beautiful full-colour photographs of museum quality works accompany a well researched and informative text. Together they represent a thrilling experience. Art of Clay provides an exciting guide which will surprise and delight both curious and seasoned collectors alike. It helps the reader identify significant developments in this dynamic and rapidly changing art form.

Native American Women

This A-Z reference contains 275 biographical entries on Native American women, past and present, from many different walks of life. Written by more than 70 contributors, most of whom are leading American Indian historians, the entries examine the complex and diverse roles of Native American women in contemporary and traditional cultures. This new edition contains 32 new entries and updated end-of-article bibliographies. Appendices list entries by area of woman's specialization, state of birth, and tribe; also includes photos and a comprehensive index.

Crafting Gender

This volume initiates a gender-based framework for analyzing the folk art of Latin America and the Caribbean. Defined here broadly as the "art of the people" and as having a primarily decorative, rather than utilitarian, purpose, folk art is not solely the province of women, but folk art by women in Latin America has received little sustained attention. Crafting Gender begins to redress this gap in scholarship. From a feminist perspective, the contributors examine not only twentieth-century and contemporary art by women, but also its production, distribution, and consumption. Exploring the roles of women as artists and consumers in specific cultural contexts, they look at a range of artistic forms across Latin America, including Panamanian molas (blouses), Andean weavings, Mexican ceramics, and Mayan hipiles (dresses). Art historians, anthropologists, and sociologists from Latin America, the Caribbean, and the United States discuss artwork from Mexico, Argentina, Chile, Colombia, Ecuador, Panama, Suriname, and Puerto Rico, and many of their essays focus on indigenous artists. They highlight the complex webs of social relations from which folk art emerges. For instance, while several pieces describe the similar creative and technical processes of indigenous pottery-making communities of the Amazon and of mestiza potters in Mexico and Colombia, they also reveal the widely varying functions of the ceramics and meanings of the iconography. Integrating the social, historical, political, geographical, and economic factors that shape folk art in Latin America and the Caribbean, Crafting Gender sheds much-needed light on a rich body of art and the women who create it. Contributors Eli Bartra Ronald J. Duncan Dolores Juliano Betty LaDuke Lourdes Rejón Patrón Sally Price María de Jesús Rodríguez-Shadow Mari Lyn Salvador Norma Valle Dorothea Scott Whitten

The Brave New World

"A history of early America that is continental in scope, inclusive in content, and intriguing in thematic argument, this course book describes the building of the nation and the daily lives of its people up to 1776. The author's main effort in revising the book for its third edition was to expand the geographical scope of the book"--

Messages from the High Desert

Listen to the artists of the Brazilian Northeast. Their work, they say, comes of continuity and creativity. Continuity runs along lines of learning toward social coherence. Creativity brings challenges and deep personal satisfaction. What they say and do in Brazil aligns with ethnographic evidence from New Mexico and North Carolina; from Ireland, Portugal, and Italy; from Nigeria, Turkey, India, and Bangladesh; from China and Japan. This book is about that, about folk art as a sign of human unity.

Folk Art

From ghost towns to Native Americans to the state flower, author Phyllis Perry collected stories and ideas from all over Colorado in order to take a fresh approach to the state's history. In this fun and entertaining new book, every aspect of the state is explored, from national parks and wildlife to early explorers and Native peoples, the state's railroading and mining days to its state symbols and modern-day landmarks. Every chapter contains unique photographs and intimate stories about Colorado's fascinating and diverse characters. A unique and fun reference, *A Kid's Look at Colorado* is a must-have for young Colorado enthusiasts!

A Kid's Look at Colorado

Photographs and descriptions of Native American Pottery Symbols and Designs from the James P. And Dorothy S. Barufaldi Collection.

Native American Pottery Symbols and Designs

The wide-ranging essays collected in this volume of Cather Studies examine Willa Cather's unique artistic relationship to the environment. Under the theoretical rubric of ecocriticism, these essays focus on Cather's close observations of the natural world and how the environment proves, for most of these contributors, to be more than simply a setting for her characters. While it is certain that Cather's novels and short stories are deeply grounded in place, literary critics are only now considering how place functions within her narratives and addressing environmental issues through her writing. These essays reintroduce us to a Cather who is profoundly identified with the places that shaped her and that she wrote about: Glen A. Love offers an interdisciplinary reading of *The Professor's House* that is scientifically oriented; Joseph Urgo argues that *My Ántonia* models a preservationist aesthetic in which landscape and memory are inextricably entangled; Thomas J. Lyon posits that Cather had a living sense of the biotic community and used nature as the standard of excellence for human endeavors; and Jan Goggans considers the ways that *My Ántonia* shifts from nativism toward a flexible notion of place-based community.

Willa Cather's Ecological Imagination

Covering nearly a thousand years of southwestern prehistory and history, this volume brings together the best of current research to illustrate the variation in the organization of ceramic production evident in this single geographic area.

Ceramic Production in the American Southwest

Pull on the uncanny threads from the legendary tapestry of New Mexico's Native American heritage. Ancient Indian history and present Native American cultures are woven together in the Land of Enchantment. The threads of these tales stretch back to Mimbres burial grounds and prehistoric trade routes. Stories and traditions tie the land to its people, in spite of the cycles of slaughter and theft that have threatened to pluck them apart. Descend into the kivas of Chaco Canyon or seek out the high mountains where the clouds mark the stones. From legends of the Salt Woman to the legacy of the Ghost Dance, Ray John de Aragon examines the mysteries of the mesas.

New Mexico Native American Lore: Skinwalkers, Kachinas, Spirits and Dark Omens

The Zuni Pueblo, 150 miles west of the Rio Grande Valley on the Arizona border in New Mexico, is the source of beautiful traditional Zuni pottery. With many photographs, this work presents some of the finest current pots and the talented young potters whose heritage has led them to this exciting art form.

Zuni Pottery

"Mary Elizabeth Jane Colter ... was an architect and interior designer who spent virtually her entire career working simultaneously for the Fred Harvey Company and the Santa Fe Railway."--p. 9.

Mary Colter

In the Pueblo IV period (1275-1600) potters began to make distinctive polychrome vessels, which have been linked by archaeologists to new ideologies and religious practices in the area. This research examines interaction networks along settlement clusters in the Zuni region of west-central New Mexico

in the thirteenth and fourteenth centuries, using analytical techniques such as INAA sourcing of ceramic pastes.

Anasazi Pottery

No one knows for certain just when the bow and arrow came into use in America, but they were in use from the far North to the tip of South America when Europeans first arrived. Over the hemisphere the equipment ranged from very poor to excellent, with the finest bows of all being made in the Northwest of North America. Some of these bows rivaled the ancient classic bow in beauty of design and workmanship. The attitudes of whites toward Indian archers and their equipment have ranged from the highest of praise with mythical feats rivaling those of William Tell and Robin Hood—to mockery and derision for the Indians' short, "deformed" bows and small arrows. The Laubins have found most of the popular conceptions of Indian archery to be erroneous—as are most of the preconceived notions about Indians—and in this book they attempt to correct some of these false impressions and to give a true picture of this ancient art as practiced by the original Americans. Following an introduction and history of Indian archery are chapters on comparison of bows, bow making and sinewed bows, horn bows, strings, arrows, quivers, shooting, medicine bows, Indian crossbows, and blowguns. Those wishing to learn something about the use of archery tackle by American Indians, something of the ingenuity associated with its manufacture and maintenance, and something about the importance of archery in everyday Indian life will find in this book a wealth of new, valuable, and important information.

Ancestral Zuni Glaze-decorated Pottery

This photographic journey spans a thousand years picturing the usual array of beautiful jars and figurines, along with unique pieces including mermaids, pickup trucks, dinosaurs, teddy bears, and a wedding vase shaped like a duck.

American Indian Archery

Biography of the man who discovered the prehistoric ruins at Mesa Verde, Colorado, and began the excavation of Pueblo Bonito at Chaco Canyon, New Mexico.

Collections of Southwestern Pottery

The Native Americans we know today in Arizona, Colorado, New Mexico and Utah are primarily descended from the culture known as Anasazi, which "settled" in the region about 2,000 years ago. Explore their lives, culture and dwellings in this book.

Southwestern Pottery

This major synthesis of work explores new evidence gathered at Basketmaker III sites on the Colorado Plateau in search of further understanding of Anasazi development. Since the 1960s, large-scale cultural resource management projects have revealed the former presence of Anasazi within the entire northern Southwest. These discoveries have resulted in a greatly expanded view of the BMIII period (A.D. 550-750) which immediately proceeds the Pueblo phase. Particularly noteworthy are finding of Basketmaker remains under those of later periods and in sites with open settings, as opposed to the more classic Basketmaker cave and rock shelter sites. Foundations of Anasazi Culture explores this new evidence in search of further understanding of Anasazi development. Several chapters address the BMII-BMIII transition, including the initial production and use of pottery, greater reliance on agriculture, and the construction of increasingly elaborate structures. Other chapters move beyond the transitional period to discuss key elements of the Anasazi lifestyle, including the use of gray-, red-, and white-ware ceramics, pit structures, storage cists, surface rooms, full dependence on agriculture, and varying degrees of social specialization and differentiation. A number of contributions address one or more of these issues as they occur at specific sites. Other contributors consider the material culture of the period in terms of common elements in architecture, ceramics, lithic technology, and decorative media. This work on BMIII sites on the Colorado Plateau will be useful to anyone with an interest in the earliest days of Anasazi civilization.

Richard Wetherill

The decorative art of the Indians of the American Southwest has long been recognized as one of the most beautiful art traditions in the primitive world. It demonstrates a technical skill with simple materials,

a symbolic richness, and a faculty for creating rich effects by the imaginative use of ornament that are all almost unique. Museums use Pueblo ceramics for display pieces, and modern artists and crafters have turned eagerly to the handwork of prehistoric Indian women for inspiration and working ideas. Mrs. Dorothy Sides, a noted artist and collector, has gathered together and redrawn in black and white nearly 300 examples of the finest authentic Southwestern Indian decoration that she has seen in a lifetime of study. She has not limited her selection to one period or style, however; to make her book as useful as possible, she has selected material ranging from the thirteenth century great geometric art of the Pueblos to the handcrafts carried on by the nomadic and Pueblo peoples of the present. The main emphasis of this volume is on ceramic decoration, and Mrs. Sides includes pieces from the rich archeological sites of Pecos, Sikyatki, the Mimbres, and modern Pueblo pottery from Acoma, Zuni, Cochiti, and the Hopi. She also includes designs and motifs from the basketry of the Apache, Pima, and Papago; beadwork from the Mohave; authentic Zuni masks; Hopi kachina dolls; and sand paintings and blanket designs from the Navajo. This broad coverage of beautiful ornament illustrates many different art styles to fit every situation: geometric designs based upon balanced mirror fields of design, symbolic figures of the thunderbird, and modern stylizations. All is beautiful and imaginative. Any crafter working with ceramics will find this book indispensable as a source of rich, easily used, powerful design; workers in wood, weavers, metal workers, and leather workers will find that it will enlarge their decorative resources considerably. It also offers unusual and eye-catching designs for commercial artists who wish to do work suggesting travel, handcrafts, the Southwest, or the social sciences. Individual drawings are royalty-free and may be reproduced without fee or permission. "Worthy of an honored place in the library of aboriginal American art." — F. H. Hodge, Director, Southwestern Museum.

Singing the Clay

This photographic examination of Southwest Indian art features full page color photos of Native American pottery with explanations on each page.

A Guide to the Anasazi and Other Ancient Southwest Indians

Follows pottery making traditions from the earliest utility wares of the Mogollon and Anasazi Indians to the early and spectacular pictorial styles of the Mimbres pots and the mineral, vegetal, and glaze-paint traditions that began to emerge around A.D. 500.

Foundations of Anasazi Culture

Noted archaeologist Polly Schaafsma presents new research by current scholars on this largely neglected ancestral Puebloan site.

A Maze of Death

A Maze of Death is a 1970 science fiction novel by American writer Philip K. Dick. Like many of Dick's novels, it portrays what appears to be a drab and harsh off-world human colony and explores the difference between reality and perception. It is, however, one of his few to examine the human death instinct and ...

A Maze of Death - Wikipedia

12 Oct 2017 — A Maze of Death has some strong moments and strong images—one-way space shuttles, organic 3-D printers, riffs on a deity that would necessarily absorb the concept of a non-deity,

a cosmic recapitulation of Odin, space sex, etc.—but on the whole A Maze of Death peters out towards the end, its energy ...

On Philip K. Dick's novel A Maze of Death

17 Feb 2015 — Philip K Dick discussion. A Maze of Death - final thoughts (spoilers). Created by Byron 'Giggsy' Paul, Feb 17, 2015 84 views. Byron 'Giggsy' Paul this ... Belsner's dream about death killing them all even if he kept them safe as if they were rats in a maze with death was probably my favorite part.

A Maze of Death - final thoughts (spoilers) Showing 1-12 ...

Dick (1928-1982) published 36 science fiction novels and 121 short stories in which he explored the essence of what makes man human and the dangers of centralized power. Toward the end of his life, his work turned toward deeply personal, metaphysical questions concerning the nature of God. Eleven novels and short ...

A Maze of Death: Dick, Philip K.

One day he died from bone fragments lodged in his stomach, the result of filching the remains of a dead Martian root-buzzard from a garbage pail. You were sad, but you still loved him. His essence, his appetite--all that made him up had driven him to his death.

A Maze Of Death

From Hugo Award-winning author Philip K. Dick, A Maze of Death is a sci-fi murder mystery set on a mysterious planet where colonists experience unexplained shifts in reality and perception. Delmak-O is a dangerous planet. Though there are only fourteen citizens, no one can trust anyone else and death can strike at ...

A Maze of Death - Philip K. Dick

Philip K. Dick died on March 2, 1982, in Santa Ana, California, of heart failure following a stroke. In addition to 44 published novels, Dick wrote approximately 121 short stories, most of which appeared in science fiction magazines during his lifetime.

A Maze of Death by Philip K. Dick

The Art of Eric Carle

Carle is one of the most beloved illustrators of children's books. This retrospective is more than just an appreciation of his art, however. The book also contains an insightful autobiography illustrated with personal photographs, an anecdotal essay by his longtime editor, a photographic essay on how Carle creates his collages, and writings by Carle and his colleagues. Still, it is the artwork in the oversize volume that seizes the imagination. More than 60 of his full-color collage pictures are handsomely reproduced and serve as a statement of Carle's impressive talent. - Booklist

Animals Animals
