The Archives of Pediatrics, 1898, Vol. 15

Excerpt from The Archives of Pediatrics, 1898, Vol. 15: A Monthly Journal Devoted to the Diseases of Infants and Children About the only advantage of a laryngoscopic view of the larynx in children is to determine the condition or position of the vocal cords, because any abnormality above the rima sufficient to obstruct respiration can be discovered by an educated finger in a few seconds. Knowledge thus acquired can be utilized for purposes of treatment as well as for diagnosis as in the case related above. Foreign bodies situated in or above the chink of the glottis are easily located by the sense of touch/and may sometimes be removed by the same aid. While giving practical instruction in intubation some years ago, I came across an infant cadaver having a large cyst on the posterior surface of the epiglottis which might well have been the cause of its death. It was easily broken with the finger. It is also quite within the range of possibility that neoplasms, for which laryngotomy is now the only resource, may be removed in the same manner. Excerpt from Archives of Pediatrics, Vol. 24: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1907 Those milks which contained from 5 to per cent. Of fat gave a top milk containing an average of per cent. Of fat. It will be seen that the fat in the ten bottles of February l^gth varied from 4 per cent. To per cent., and the fat in the top 8 ounces varied from 16 to 20 per cent. Incidentally it will be observed that the 4 per cent. Milk gave about 16 per cent. Of fat in the top 8 ounces, which is 2 per cent. Higher than I have heretofore found it to be, and higher than it has generally been stated to be. This means that we have been feeding our infants with a larger percentage of fat than we have intended to, or thought we were feeding. The effect of this is that when we thought we were feeding per cent. Of fat we were actually giving from to per cent. Of fat. When we thought we were giving 3. 5 per cent. We were actually giving from per cent. To per cent. The difference between and 5 per cent. Fat in a baby's food is a matter of no small importance, and probably accounts for some troubles that we have seen on certain days and which we could not explain. The chart shows that the variation in the same day from the same farm is from 1 to per cent. Of fat in the whole milk. If the amount were uniform from day to day, we could adjust it to the needs of the infant; but when we use 15 per cent. Top milk on one day and 20 per cent. Top milk the next, serious disturbance may result. There is manifestly a necessity for some means of securing a more uniform milk than these figures show. The cause of the variation may be in the methods used in bottling, or it may be in the breed of the cows in the stable. Excerpt from The Archives of Pediatrics, Vol. 1: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1884 With a properly fitting tube with a movable collar ulcerations in the trachea will not occur because the essential element in their causation (i. E. Pressure) is removed. The voice after the removal of the tube is aphonic as a rule this condition gradually improves so that at from one week to a month it is entirely restored, - electricity applied to the larynx externally or internally to the vocal chords may hasten the cure as well as proper care in use of the voice. Excerpt from The Archives of Pediatrics, Vol. 4: A Monthly Journal Devoted to the Diseases of Infants and Young Children; January to December, 1887 The cases which form the basis of this paper came under the, writer's observation within a period of eighteen months; a fact which has led him to the conclusion that primary renal disease in infancy is by no means so rare as has generally been supposed. They are published for the purpose of drawing more attention to the importance of the examination of the urine at this time of life, something which heretofore has been overlooked almost entirely except in cases of diphtheria and scarlet fever. Almost one in four people in OECD countries is currently obese. This epidemic has far-reaching consequences for individuals, society and the economy. Using microsimulation modelling, this book analyses the burden of obesity and overweight in 52 countries (including OECD, European Union and G20 countries), showing how overweight reduces life expectancy, increases healthcare costs, decreases workers' productivity and lowers GDP.

ARCHIVES OF PEDIATRICS

Excerpt from Archives of Pediatrics, Vol. 28: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1911 In the second case mother and child succumbed after Caesarean section. The child was living when operation was begun but when removed was perfectly rigid in all its

body and extremities. It evidently had died in a convulsive seizure in utero. The pathologic findings were similar in both mother and child. The urine was drawn from the child's bladder by means of a soft catheter, immediately after it was delivered from the uterus, and it was found to be the urine of acute nephritis. It contained 10 grams of albumin to the liter, numerous red blood cells, few leukocytes and casts of all kinds. Case III. Eclamptic mother died after Caesarean section. Her child survived. The urine collected from the infant showed hematuria and albumin for three days. The albumin disappeared on the fifth day and the child gained slowly. Case IV. Eclamptic mother died, survived by her infant. The urine collected from the child showed a large amount of blood, albumin and leukocytes, hyaline and blood casts. The urine was free from albumin for the first time on the eighteenth day after birth. Case V. The mother died in eclamptic seizure. Her child had light convulsive seizures during the first five hours after delivery. Case VI. Eclamptic mother gave birth to twins. The mother had but one convulsion and recovered. The twins thrived, though both gave urine loaded with blood, albumin and casts. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Pennsylvania Archives ...

Discusses the types of documents included in the various series of the Pennsylvania Archives, the best order to work through them to obtain the most results quickly, and routes to follow to locate a set of the Archives.

Pennsylvania Archives

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Pennsylvania Archives

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Pennsylvania Archives; Volume 12
