

Neurobiology Of Social Communication In Primates

[#neurobiology](#) [#primate communication](#) [#social neuroscience](#) [#animal behavior](#) [#brain and behavior](#)

Explore the fascinating neurobiology underlying social communication in primates. This field investigates the intricate neural mechanisms and brain regions responsible for processing and generating social cues, vocalizations, and gestures essential for primate interaction and group cohesion. Understanding these biological foundations is crucial for insights into primate social structures and the evolution of complex communication systems.

All theses are reviewed to ensure authenticity and scholarly value.

How Humans Are Almost Identical to Chimps, According to DNA - How Humans Are Almost Identical to Chimps, According to DNA by SciShow 580,566 views 2 years ago 11 minutes, 24 seconds - On the genetic level, we're not all that different from chimps. But those small differences in DNA can have massive effects.

To find the basic differences in the actual molecules that make up our DNA, we first needed to sequence the full genomes of both humans and chimps.

Every gene is surrounded by shorter stretches of DNA that work like switches.

They control when and where in the body a gene is switched on, and how much protein is made from it.

This is all coordinated through a network of proteins and other molecules that interact with these switches.

And finding meaningful changes among all the neutral ones is like searching for a needle in a haystack

Modern humans have unique methylation patterns around hundreds of genes.

And it appears to enhance the activity of another gene specifically in the neocortex, an area involved in higher brain functions.

They should be able to use gene editing to see what happens to cells or organoids when you change individual DNA sequences.

The Entire Nervous System Including the Brain Which We'Re Going To Get into in a Moment Is All about the Connection of the Inner and the Outer this Is Extremely Important Okay so the Egg and Sperm Get Together the Conceptus Divides Okay Now It's Imaginary so the Neural Tube Is Being Made the Brain Is Being Made and Now Here's the Amazing Thing You'Re in the Womb and these Experiences We Have in the Womb Do You Have To Eat in the Womb No Do You Have To Breathe in the Womb No Do You Have To Pay Taxes in the Womb

But What Research Suggests this Is a Really Incredible View Is that the First Time I Figured Out Things like What Am I Aware of Where's My Attention Where's My Intention Is by Looking at My Village Mate and Figuring It Out in Her So in My Brain What that Means Is as a Human Being My Mammalian Brain and that My Primate Brain Now It's a Human Brain It Develops All this Machinery To Look at the Face of another Person To Listen to the Sounds the Other Person's Making To Look at the Nonverbal Signals of that Person and To Make a Map in this Brain in My Head of the Mind of My Village Partner Is She Trustworthy or Not Where's Her Awareness Where's Her Attention Where's Her Intention

You Had To Resonate with Them and Be Present with Them You Had To Attune to Their Inner Life and the Way I Remember all That Now Is with the Word Part if You Were Present if You'Re Open to What Was Going on that's the P if Bread a Part and Then You Attune Meaning You Focused Your Attention on the Subjective Inner Life of the Other Person That's a Tune Meant and Then You Allowed Your Body To Feel the Ache but Not Become the Other Person That's Called Resonance so Presence Attunement Resonance Just like Guitar String You Know the Low Notes Don't Become the High Notes They Just Resonate with Them so It's Not Mirroring You Have To Become the Suicidal Person Says I'M GonNa Kill Myself Well I'M GonNa Kill Myself-Isn't that a Tuning Do You Know It's You Maintained a Differentiated Nature

And Then You Allowed Your Body To Feel the Ache but Not Become the Other Person That's Called Resonance so Presence Attunement Resonance Just like Guitar String You Know the Low Notes Don't Become the High Notes They Just Resonate with Them so It's Not Mirroring You Have To Become the Suicidal Person Says I'M GonNa Kill Myself Well I'M GonNa Kill Myself-Isn't that a Tuning Do You Know It's You Maintained a Differentiated Nature but You Linked There's that Concept Again and Then the T of Part Is You Develop Trust

So What We'Re Saying Is that We'Ve Got this Thing Called the Mind Which Includes Subjective Experience Consciousness and Information Processing but None of that Really Puts It into Relationships Does It So if I Said to You What Is a Relationship Think about It What Would You Say Synchronize

Interactions Beautiful Let's Start with Interactions What's What Is an Interaction Back-and-Forth Communication Excellently that's Synchronized in Time Excellent So Back and Forth Communication What Is Communication Sharing of Information Exactly and What Is Information a Pattern of Energy with Symbolic Value Exactly so We Thank You We've Just Defined What Our Relationship Is that's Awesome a Relationship Is the Sharing of Energy and Information Period
That's all It Is the Whole Purpose of this Brain in Your Head Is Actually To Take Care of both the Inner Experience of the Body and the Relational Experience of the Body That's It What Is It about if You Had To Summarize this Brain In like a One-Sentence Elevator Speech Believe It or Not It's the Embodied Mechanism of Energy and Information Flow That's It Bless You in Fact Let's Have a Bless You for Everyone's GonNa Sneeze so We Don't Think about You Ready Do You Feel Blessed
