Technological Transformation in Indian Agriculture

The Book Arises Out Of A Seminar Organized By All India Kissan Sabha - Contains 15 Papers Which Seek To Analyse And Assess The Social Changes Brought About By New Technology In The Arena Of Agriculture. Eminent Persons Participated In The Seminar, The Papers Relate To Technological Changes - Right To Work, Land Reforms - Commercialization & Agriculture Among Other Subjects. Without Dust Jacket.

Technological Transformation of Agriculture: A Study of Assam

The book brings out an encyclopaedic picture of the potential areas of transformative Indian agriculture through innovations in science, technology, institutional and policy affairs directed in building a self-reliant India (Atmanirbhar Bharat). The book has addressed the challenges to make India free from hunger, poverty and undernutrition, and suggested interventions with focus on all-inclusiveness and sustainability, peace and prosperity, and resilience to climate and other volatilities. Most of these propositions are analogous to the Sustainable Development Goals – Agenda 2030, which India has committed to achieve. The book especially covers critical needs for development on different fragile ecosystems such as coastal, desert, hill, ravine and other marginal ecosystems. The book will act as very useful guidance for the policy makers, and development communities, and a reference document to academicians as well. Note: T&F does not sell or distribute the hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. This title is co-published with NIPA.

Technology and Social Change in Agriculture

Economic evaluation of the impact of technological changes on income distribution in the agricultural development process in India - suggests that the biggest prospects for improvement of agricultural income distribution lie in public investment in irrigation projects. References and statistical tables.

Class Relations & Technical Change in Indian Agriculture

This work analyzes growth and structural change in Indian agriculture over the last three decades. In order to develop a global perspective, the Indian agricultural growth experience is introduced using parallels and contrasts with other parts of the Third World. The book is characterized by an empirical approach to the underlying economic data and a multi-disciplinary approach to the ramifications of agricultural growth. Considered among these are the transformation of the female labor force, population migrations and changes in human welfare. This book differs from the numerous others on

Indian agriculture insofar as it takes a regional perspective, focusing on the causes and effects of inter-state variations.

Innovations in Agriculture for a Self-Reliant India

Contributed articles on economic aspects of agriculture in India.

AGRICULTURAL TRANSFORMATION IN INDIA SINCE INDEPENDENCE

Contributed articles.

Technological Change and Distribution of Gains in Indian Agriculture

This book uses sound theoretical frameworks and econometric techniques to rigorously analyze and explain the conditions of sustainable growth in agriculture. It further investigates how management of natural resources and technological advances can enhance productivity and ensure sustainable growth in agriculture. Optimal control theory, dynamic optimization problems and theory of risk and uncertainty are extensively used to create theoretical models for analyzing agricultural growth. The results demonstrate that crop diversification, rainwater harvesting and the use of organic fertilizers can ensure growth in agriculture from a dynamic perspective. Further, they show how excessive depletion of ground water, intensive farming and overuse of chemicals in connection with the adoption of modern technology in agriculture have placed tremendous strains on natural resources like land and water, and have called into question the sustainability of growth in the farming sector.

Issues In Indian Agricultural Development

The articles included in this book focus on; Digital divide in rural India, e-Agriculture issues, Cyber extension, overview on Village Knowledge Centres VKCs, Community Information Centre initiative in Orissa, SATCOM application in Karnataka State, Model e-Villages in Arunachal Pradesh State of North-East India, Nationwide InDG web portal initiative for rural development, Kisan Mobile Sandesh KMS, Dynamic Market Information DMI by Web and Mobile in Tamil Nadu, Expert systems for pest and diseases diagnosis in rubber, Interactive Multimedia Compact Disc IMCD, Village Information Centres among Dairy Farmers in Tamil Nadu, KISSAN initiative of Kerala State, Mobile Agricultural School and Services MASS in Jharkhand, Farmers Database creation in Darjeeling District of West Bengal, Village Resource Centres VRCs in Uttaranchal, Pest Surveillance of Rice using satellite data, Techmode Approach for Distance Learning Courses for Field Veterinarians in Maharashtra, Information Retrieval System for Buffalo Reproduction, Web Portals and Digital Data base in Agroforestry, Watershed Modelling using GIS and Remote Sensing in Gujarat State, e-Readiness and Participation Level of Akshya and KISSAN Kerala Beneficiaries and VRC & CIC Network in Assam and Internet utilization pattern, evaluation of Kissan Call Centres KCCs, ICT adoption level, impact, stakeholders feedback, policy implications and recommendations.

Technological Change and Distribution, of Gains in Indian Agriculture

This open access book brings together varying perspectives for transformational change needed in India's agriculture and allied sectors. Stressing the need of thinking for a post-Green Revolution future, the book promotes approaching this change through eight broad areas, indicating the policy shifts needed to meet the challenges for the coming decade (2021-2030). The book comprises of ten contributions. Apart from the overview chapter on transformational change and the concluding chapter on pathways for 2030, there are eight thematic chapters on topics such as transforming Indian agriculture, dietary diversity for nutritive and safe food; climate crisis and risk management; water in agriculture; pests, pandemics, preparedness and biosecurity natural farming; agroecology and biodiverse futures; science, technology and innovation in agriculture; and structural reforms and governance. The writing style of these papers written by technical experts is forward-looking—not merely an analysis of what has been and why it was so, but what ought to be. This is an essential reading for those interested in agriculture, food and nutrition sectors of India, and more so their interconnectedness.

Indian Agriculture in the New Millennium

Economic research study of the family farming system in Indian agriculture - analyses the psychological aspects and sociological aspects of resistance to innovation in cultivation techniques and the implication for agricultural planning.

Modernizing Indian Agriculture in 21st Century

This book presents an extensive study on India's agricultural and nonfarm sectors, examining prices, investments and policies, and suggesting various essential technological changes. It offers appropriate financial, institutional, and policy frameworks that can help to sustain agricultural growth and augment farmers' incomes across geographical locations. Further, it addresses agricultural growth and rural poverty reduction through multiple pathways that also tackle varied geographical locations, making it a highly useful guide to understanding the changing contours in agriculture and rural areas across the country and among rural households with various social and economic backgrounds.

Productivity and Technical Change

The green revolution in Punjab, India: rural structural changes in nonmetropolitan regions; New technology and rural transformation: a case study of Pakistan Punjab.

Technological Possibilities of Indian Agriculture

The present book provides an exhaustive, descriptive, and analytical account of policies and programmes for development of agriculture and rural areas in India since Independence in 1947. The book contains 25 chapters which have been organized into 2 parts. Part I (chapters 1 to 15) is titled Agriculture and Allied Sectors. It provides glimpses of Indian agriculture during the British rule, role of agriculture in the Indian economy, recent legislative measures for agricultural sector, land reforms, agricultural inputs, agricultural marketing, plantation and horticulture, agricultural exports and imports, agriculture and information technology (IT), gender issues in agriculture, climate change and Indian agriculture, and various other topics related to agriculture and allied activities. Part II (chapters 16 to 25) is titled Rural Infrastructure and Development. It explains and examines rural industries, rural financial inclusion, MGNREGS, rural housing, rural transport and communications, rural electrification and water supply, rural health and sanitation, and other topics related to rural development.

Technological Change in Indian Irrigated Agriculture

UNRISD pub. Research report on the economic implications and social implications of the green revolution in India - covers self-sufficient food security, obstacles to agricultural development, and land reform; examines the use of high yielding seeds and other inputs, costs, crop yields and agricultural incomes, as well as farm size, efficiency and profitability; discusses the impact of the new agricultural technology on small farms and agricultural workers. Bibliography, graphs, statistical tables.

Resources, Technology and Sustainability

Extract: This report analyzes the processes that might result in more or less instability of yields for individual crops; for the same crop produced in different regions and in different seasons in the same region; for foodgrains generally in different regions of the country; or for farms of different sizes. Because the new crop technology has made an important contribution to the growth of yields per hectare, and because the new technology itself has made the greatest headway in irrigated areas, the obvious question is: has seed-fertilizer technology increased yield variability, and, if so, has this added variability been confined only to unirrigated areas?

Information and Communication Technology for Agriculture and Rural Development

The book is the outcome of changing global perception about agriculture in view of globalization, innovations, increased urbanization, depleting natural resources, changed consumer preference and shift from produce to product development. The volume comprises 23 chapters encompassing diverse areas of agriculture including livestock farming and horticulture. First chapter elaborates the bottlenecks and gaps in the form of challenges that one needs to know while thinking of futuristic plans. Chapter 2nd enumerates technologies that changed the scenario of Indian agriculture and brought green revolution and sustainability in food production. Third chapter is devoted to new innovations and technologies that deserve priority if transformation in agriculture is desired. Small holdings are the characteristic feature of Indian agriculture and how contract farming is relevant and important is described in chapter

4. Due to increased preferences for vets and pets in our daily life zoonotic diseases have gained socio-economic significance, chapter 5 highlights it. Chapter 6 elaborates the role and relevance of ICTs (information and communication technologies) in agricultural transformation. Climate smart agriculture is essential part of agro-transformation and is described in chapter 7. Parasites in dairy cattle can reduce productivity upto 30% and chapter 8 focuses on their strategic management. Chapter 9 focuses on marketing interventions while chapter 10 discusses relevance of seed priming in climate resilience. Chapters 11 and 12 provide judicious coverage on horticultural technologies and their strategic implementation to boost productivity. Importance of biochar and organic agriculture in context of sustainable transformation is highlighted in chapter 13 and 14 respectively. Chapter 15 signifies the role of dairy farming. Weather forecasting and agro-advisory have become indispensable component of modern agriculture find place in chapter 16. Chapter 17 reveals avenue in agriculture through integrated farming system while chapter 18 discusses importance of remote sensing in integrated transformation of agriculture. Role of KVKs and biotechnological approaches is appropriately dealt in chapter 19 and 20 respectively. Chapter 21 places due emphasis on effect of climate change on parasitic diseases of animal and human. Scope of high cropping intensity in agricultural transformation is dealt in chapter 22. Last chapter 23 but not the least, is on organic agriculture as an entrepreneurship for women empowerment and socio-economic transformation which discusses the compatibility and suitability of organic agriculture to women entrepreneurs.

Technological Change and Agricultural Development in India

This book helps readers understand the concepts of marketed and marketable surplus, as well as the role of the government and marketing agencies, including those in the private sector, in improving market efficiency. It also examines the impact of various socioeconomic, technological, institutional, infrastructure, and price factors on the marketed surplus of major crops. While Indian agriculture has become increasingly market-oriented and monetized, the importance of market orientation of agriculture is also being recognized at the international level. The proportion of agricultural production that is marketed by farmers has increased significantly over the last few decades in India: in the early 1950s, about 30–35 per cent of food grains output was marketed, which has now increased to more than 70 per cent. In this context, the marketed surplus is proportionately higher in the case of commercial crops than subsistence crops. Recognizing its importance, the Government of India initiated a nation-wide survey to estimate marketable surplus and post-harvest losses in the early 1970s, which continued up to the late 1990s. As Indian agriculture, has undergone significant transformation, and no reliable estimates of marketed and marketable surplus are available, the study was conducted to estimate the marketed and marketable surplus of major food crops in leading producing states, and to examine important factors which determine the level of marketed surplus for various categories of farms. The results of this study offer a valuable resource for designing effective food procurement, distribution and price policies. Further, they provide reliable estimates of household farm retention pattern for self-consumption, seed, feed, wages and other payments in kind, which can be used as the basis for planning infrastructure development of storage and distribution. This essential information can help policy-makers determine how much marketed surplus is generated by the different categories of farmers and how marketable surplus would respond to changes in diverse economic and non-economic variables, allowing them to design policies accordingly.

Dynamics of Agricultural Development

In this paper, we study the transformation process Indian agriculture exhibited in the recent past, studying its policy implications. Between the years 2005-06 and 2015-16, more than 52 million workers left agriculture, which did not have any effect on agricultural output due to productivity improvements. We estimate the contribution of productivity growth and structural change in agriculture to national productivity growth during 1981-2016. We estimate differentials in agricultural productivity and in their ability to contribute to the structural change process for 21 major states of India. Using revised employment estimates, we trace major changes during the pre-reforms (before 1991) and post-reforms periods. Results show that in the pre-reforms period, the impact of productivity improvements in agriculture on agricultural output was equated by the new workforce entering into this sector, leading to a stagnant labor productivity trend. The labor-shift from agriculture during the early years of the post-reforms period, which increased further in the next decade, has led to a consistent rise in agricultural productivity. In the absence of reforms and the associated labor shift, the productivity growth in Indian agriculture would have been much lower. A similar labor shift during the last decade has not affected agricultural output, which has risen more rapidly. This result holds true for almost all states

studied. There exists a positive relation between labor-shift and agricultural output in a cluster of states. Decomposition results indicate 'within-sector' productivity growth is the major source of overall growth, with a rising contribution of 'structural change'. Studying the sources of growth across states offers new scope to achieve inter-sectoral productivity convergence.

Indian Agriculture Towards 2030

Studies key design features of policy pilots influencing their scaling-up and mainstreaming into formal policies.

Technological Change in Indian Agriculture

The central problem to which this book, first published in 1984, is addressed is the transformation of agrarian structure as it historically evolved in India. The term 'structure', however, has multiple meanings. The sense in which the term is used refers to the system of production, including the pattern of its composition in terms of micro-units of production, and the social and economic relations by which they are integrated. This concrete analysis and examination of the evidence of Indian agriculture is undertaken from this perspective, and contributes to the theory of agrarian change as well as an interpretation of the development of Indian agriculture.

Agriculture - Producer's Rationality and Technical Change

Using the Ricardian approach (a cross sectional analysis of farm performance across different climate zones), this report examines the impact of climate change on the agriculture sector and the sector's adaptation to that change. Studies in the report measure the climate sensitivity of low-capital agriculture, test whether actual farm performance is as sensitive to climate as agronomic models predict, and compare the climate sensitivity of low-capital farms with the results already calibrated for U.S. agriculture. The goal of the study is to examine farm behavior and test whether there is any evidence that farmers in developing countries currently adjust to their local climates.

Changing Contours of Indian Agriculture

Study of Kerakat Block, Jaunpur District, Uttar Pradesh.

New Technology and Agricultural Transformation

Class Relations and Technological Change in Indian Agriculture

A Research Oriented Pioneer Book on Agricultural Transformation in North East India by Dr. Moloy Kanti Roy published from Akshar Publications, Agartala/Kolkata/New Delhi in February, 2022.

75 Years of Agricultural and Rural Development in India: 1947-48 to 2021-22

This open access book examines the interactions between India's economic development, agricultural production, and nutrition through the lens of a "Food Systems Approach (FSA)." The Indian growth story is a paradoxical one. Despite economic progress over the past two decades, regional inequality, food insecurity and malnutrition problems persist. Simultaneously, recent trends in obesity along with micro-nutrient deficiency portend to a future public health crisis. This book explores various challenges and opportunities to achieve a nutrition-secure future through diversified production systems, improved health and hygiene environment and greater individual capability to access a balanced diet contributing to an increase in overall productivity. The authors bring together the latest data and scientific evidence from the country to map out the current state of food systems and nutrition outcomes. They place India within the context of other developing country experiences and highlight India's status as an outlier in terms of the persistence of high levels of stunting while following global trends in obesity. This book discusses the policy and institutional interventions needed for promoting a nutrition-sensitive food system and the multi-sectoral strategies needed for simultaneously addressing the triple burden of malnutrition in India.

Notes on the dissemination of new technology. Observations on brazilian agricultural research and productivity. The challenge of agricultural research in Brazil.

Brazilian Agriculture and Agricultural Research

The book, Sociology in Latin America ,deals with three areas-rural sociology demography-and the study of Latin American Societies.The purpose of this book is to introduce the reader to the study of population,rural and urban societies and gerontology in various less developed and developing countries of Latin AmericaThis book is a valuable source indicatin the influence of history,cultural conflict and the dynamics of modernization and industrialization on various social institution.

Sociology in Latin America

Beginning in 1954, Apr. issue lists studies in progress; Oct. issue, completed studies.

Research on the American Republics

An ideal resource for researchers and scholars interested in Latin American studies, this unique and valuable guide identifies individuals born between the years 1700 and 1910 who are or were engaged in some activity concerned with Latin America in general or any of its nations or regions. While the majority of Latinamericanists cited here served as university professors, diplomats, and business people, the list of notable experts includes artists, attorneys, authors, bankers, clergy, explorers, economists, geologists, and journalists. For each entry, the author has listed each individual's full name, profession, employer, and two of his publications, thereby indicating his or her Latin American interests. The fascinating array of topics that these pioneers have addressed in their books include subjects that have been studied extensively, as well as those subjects that have barely been reviewed. A valuable feature of the book is the history of Latin American studies, written by pioneer Dr. A. P. Nasatir, Research Professor of History Emeritus at San Diego State University, who began teaching in the United States in 1928. Faculty, students, and researchers interested in Latin American studies will find this book valuable.

Data. Farm-level diversification and product mix. Cluster analysis. Univariate analysis. Longitudinal analysis. Conclusions and policy implications.

Guide to the Writings of Pioneer Latinamericanists of the United States

This book comprehensively examines the development of Brazilian agriculture by focusing on the crops which evolved from national products to international commodities on a massive scale. It traces the transformation of Brazil from a country with low-yield levels in 1950 to its current position as a leading world producer. The first section of the book examines the modernization of Brazilian agriculture through a government programme which transformed traditional agriculture through subsidized credit, guaranteed prices, stock purchases, land utilization laws, modern research, new technology and major support for exports. It also explores the changing structures of agricultural production and farm ownership over time, analysing national censuses from 1920 to 2017 to illustrate the increasing efficiency of Brazil's agricultural workers. The book then discusses the history and evolution of the major Brazilian crops in detail, starting with the newer export crops such as soybeans, maize and cotton, before focusing on the traditional sugar and coffee industries. The final section of the book examines two other major areas of agroindustry: forestry and the evolution of the pastoral industries, as well as the growth of a meat exporting sector. The authors also explore questions of sustainability in the context of today's climate challenges, and the role of Brazilian agriculture in the world market going forward. This wide-ranging study will be of interest to a range of academics, including those working in agricultural economics, economic history, the history of Latin America and the history of agriculture more broadly.
