Advances in Asset Management and Condition Monitoring

Gas compressors tend to be the largest, most costly, and most critical machines employed in chemical and gas transfer processes. Since they tend to have the greatest effect on the reliability of processes they power, compressors typically receive the most scrutiny of all the machinery among the general population of processing equipment. To prevent unwanted compressor failures from occurring, operators must be taught how their equipment should operate and how each installation is different from one another. The ultimate purpose of this book is to teach those who work in process settings more about gas compressors, so they can start up and operate them correctly and monitor their condition with more confidence. Some may regard compressor technology as too broad and complex a topic for operating personnel to fully understand, but the author has distilled this vast body of knowledge into some key, easy to understand lessons for the reader to study at his or her own pace. The main goals of this book are to: Explain important theories and concepts about gases and compression processes with a minimum of mathematics Identify key compressor components and explain how they affect reliability Explain how centrifugal compressors, reciprocating compressors, and screw compressors function. Explain key operating factors that affect reliability Introduce the reader to basic troubleshooting methodologies Introduce operators to proven field inspection techniques

Industrial Standardization

After the initial enthusiastic initiatives and investments and the eventual bubble, electronic commerce (EC) has changed and evolved into a well-established and founded reality both from a technological point of view and from a scientific one. Nevertheless, together with its evolution, new challenges and topics have emerged as well as new questions have been raised related to many aspects of EC. Keeping in mind the experience and the tradition of the past editions of EC-Web, we tried, for its 10th edition, to introduce some meaningful innovations about the structure and the scientific organization of the conference. Our main target was to highlight the autonomous role of the different (sometimes heterogeneous) aspects of EC, without missing their interdisciplinary scope. This required the conference to be organized into four "mini-conferences," each for a relevant area of EC and equipped with a corresponding Area Chair. Both the submission and the review process took into account the organization into four tracks, namely: "Service-Oriented E-Commerce and Business Processes," "Recommender Systems," "E-Payment, Security and Trust" and "Electronic Commerce and Web 3.0." Therefore, the focus of the conference was to cover aspects related to the theoretical foundation of EC, business processes as well as new approaches exploiting recently emerged technologies and scenarios such as the Semantic Web, Web services, SOA architectures, mobile and ubiquitous computing, just to cite a few.

Leniency has emerged as one of the main enforcement instruments used by competition authorities to combat cartels. Offering immunity from punishment is believed to destabilise already existing cartels and deter undertakings from entering into such arrangements. This book offers the first in-depth

analysis of the scope of leniency in European Union (EU) competition law, considering three crucial ramifications – ensuring a leniency applicant can self-report with confidence, retaining the right to compensation of those who have suffered losses due to the cartel and furthering the objective of undistorted competition within the internal market. With thorough insight into the interaction between the Commission's Leniency Notice and public and private enforcement, the author fully explains such aspects of the subject as the following: who is eligible for leniency; liability of an immunity recipient; the EU fining system; disclosure of leniency evidence; scope of public authorities reaching out to cartel infringers; the immunity recipient and follow-on damages claimants; the immunity recipient and subsequent leniency applicants; effect of the Damages Directive; and the European Economic Area dimension. The author offers cogent suggestions about how the shortcomings of the Commission's leniency offer can be ameliorated and which regulatory steps should be taken to give the policy greater leverage. The author calls for increased harmonisation at national level in the EU and compares leniency practice in US antitrust law. As a comprehensive analysis of the practical application of current policy and procedure in EU cartel enforcement, the book clearly shows the ways in which the scope of leniency is manifest in the interaction between public and private enforcement, evaluating which interaction is most effective. Its practical character will be recognised and welcomed by competition law practitioners and policymakers, who will strengthen their grasp of leniency procedure and clearly discern implications for competition infringement cases.
