The Lost Magic of Christianity

Lost Magic of Christianity is a startlingly original study of the Ancient Wisdom Tradition and Celtic Christianity in Ireland and the West.

The Essenes

Eyewitness accounts of the secrets of the mystery school of the Essenes at Qumran; and Jesus' and Joseph of Arimathea's connection with the Essenes. The information was gained through regressive hypnosis.

Hidden Gospels

Debunks the claims that recently discovered texts such as the Gospel of Thomas and the Gospel of Mary undermine the historical validity of the New Testament.

The Globalization of God

• Roman Catholicism was the first multinational corporation • Preaching was the forerunner of advertising • Roman Catholicism created the template for the spread of commercial globalisation through multinational corporations • For global Christianity to succeed all local expressions of Christianity had to be suppressed. These included Celtic Christianity. For 800 years the Roman church tried to break the independent spirit of Celtic Christianity • Despite being defeated in 1014 at the Battle of Clontarf, the Irish Vikings, through their urban bishops, were key actors in the imposition of Roman episcopal structures of church throughout Ireland in the 12th century • There was an 'invasion' of Norman monks to Ireland which began in 1142, twenty-five years before the military invasion in 1167 • The ecclesiastical colonisation of Ireland meant that: – a Roman episcopal and diocesan structure replaced the Celtic monastic structure – Norman colonisers destroyed Celtic monasteries and replaced them with imported European religious orders – Cistercian monasteries in Ireland were required to have French abbots and sometimes these were imposed by force – no Irishman was allowed to become a bishop or attain any ecclesiastical high office • St Malachy of Armagh betrayed his own Celtic heritage and was a key figure in bringing about the ecclesiastical colonisation of Ireland • Monotheism is the mythical container for globalization • Humans will fail to return to a sustainable way of living on this planet until the mythological container of monotheism is replaced by new bioregional spiritualities that go beyond both monotheism and polytheism

Discovering Celtic Christianity

Perfect for those who love to travel or wish they could travel, this book brings to life the saints and illustrates the places where Christianity blossomed through exciting narrative and vivid photography.

Learn more about the Celtic way and how such people as Ninian, Pelagius, Patrick, David, Hilda, Brigid, Columba, Aidan, Ciaran, and Kevin practiced it throughout Ireland and the British Isles. Find out how people today have received great spiritual inspiration from these people and places and have discovered the relevance of Celtic Christianity in their own lives.

American Book Publishing Record Cumulative 1998

Interprets the nature of Christianity in Celtic Britain and Ireland from the 5th to the 10th cent., based on written and visual evidence- images of Christ in manuscripts, metalwork and sculpture. The strain of the Pelagianism in Britain in the early 5th century influenced the theology and practice of the Celtic monastic Churches on both sides of the Irish Sea, making theological spectrum quite distinct from that of the continent.

Christ in Celtic Christianity

Did seven monks carry The Grail from Glastonbury Abbey at the time of the Dissolution of the Monasteries in 1539, to the Cistercian Abbey of Strata Florida in Mid Wales? The mystery of the Nanteos Cup and its healing powers has fascinated and intrigued for 300 years.

The Nanteos Grail

This book argues that the religion that flourished in the British Isles during the so-called Dark Ages had more in common with Eastern traditions such as Buddhism than with the later institutional Christianity of the West. This was the religion taught by the Celtic Church, which, over the early centuries of the Christian era gradually moved into confrontation with Rome - a confrontation that finally ended with Rome's victory at the Council of Whitby in 664 AD.

The Celtic Alternative

Fascinating, painstakingly researched study of occult beliefs and practices in Celtic Britain, with intriguing discussions of the origins of the Druids, Arthurian cults, the mystery of the Holy Grail, Celtic spells and charms, black magic, the Celtic spirit world — with its populations of banshees, leprechauns, brownies and a host of lesser phantoms — and many other topics. A compelling, erudite study that will appeal to anthropologists, folklorists, and anyone interested in the customs and spiritual life of Britain's ancient Celts.

The Magic Arts in Celtic Britain

J.R.R. Tolkien observed that the word Celtic "is a magic bag, into which anything may be put, and out of which almost anything may come ... Anything is possible in the fabulous Celtic twilight, which is not so much a twilight of the gods as of the reason." But in this volume, Ted Olsen digs beneath the layers of romanticization to introduce you to the world of the Celts. Focusing on their interaction with the Christian faith, Olsen tells the stories of principal characters from Ireland and beyond. As he illuminates the missionary fervor and monastic ideals of saints such as Patrick and Columbanus, Olsen brings a distant period of history to vivid life. - Publisher.

An Introduction to Celtic Christianity

A profound exploration of the Celtic spiritual tradition, and particularly of the Celtic visionary imagination. Connecting this with both the Platonic and Islamic traditions, this book suggests a "lost category" of existence which would account for the possibility of resurrection from the dead and communication with Angels. Noel O'Donoghue opens up new and exciting horizons for Christian exploration.

The Celtic Christianity of Cornwall

An exploration of what makes Celtic spirituality, with its focus on the environment and its sense of the sacred existing in all things and creatures, particularly relevant for the modern world.

What is Celtic Christianity?

"The Elements of Christianity provides a thoughtprovoking examination of the spirit religion which flourished on the islands of Britain during the Dark Ages, and which was notable for its great simplicity, austerity and profound respect for the dignity and sanctity of nature."--

Angels Keep Their Ancient Places

This book explores how the native Christian communities of the British Isles from the fifth to the tenth centuries have been idealised and appropriated by succeeding generations who have projected their own preconceptions and prejudices on to a perceived 'golden age' of Celtic Christianity.

Christ of the Celts

A detailed history of the Churches of the Irish and the Britons from the fourth to the twelfth century with special emphasis on pre-Viking Ireland.

The Elements of Celtic Christianity

After the Romans left Britain, the Celtic church had to survive on its own. Fay Sampson guides us through the events and personalities of this time with an entertaining mixture of narrative and commentary.

Celtic Christianity

Scholars have been intrigued by the similarities between the Celtic religious traditions and those developed in Egypt, Palestine and Asia Minor during the first Christian millenium. Jacob Ghazarian shows that despite limitations of geography, links between the opposite ends of the Christian world were extensive.

Christianity in Celtic Lands

In recent years Celtic spirituality has attracted a great deal of interest, and has been regarded as a manifestation of a world religion that can be seen as separate from Christianity as well as being linked to it. In pre-Christian Ireland, the Celts had their own sophisticated rituals of worship, as sites like Newgrange in the Boyne Valley, which predates the Pyramids of Egypt, make clear. The seasons, astronomy, nature and their perception - as a farming people - of the bounty of the earth; all these elements formed part of the celtic way of worship. When Christianity came to Ireland it was grafted on the native plant, so that the Islands of Saints and Scholars became the glory of Europe and the salvation of Christianity in the barbarian West. But for ordinary people too, a distinct spirituality was born, different from that of any other country, and remnants of which survive to this day. This succinct and informative book looks at the belief systems for the Celts and links them to the development and growth of Christianity in Ireland.

Visions and Voyages

Celtic Christianity enjoys immense popularity. It has generated a torrent of books, videos, cassettes and even new 'Celtic' churches. This book explores the reasons for such interest and examines how the modern version squares with what we know of the original Celtic Christianity.

The Mediterranean Legacy in Early Celtic Christianity

Excerpt from *The Celtic Christianity of Cornwall: Divers Sketches and Studies* N one of the most brilliant of modern books its author 1 calls attention to the common fallacy which assumes that if you can find a principle which gives an adequate explanation of three different facts it is more likely to correspond with the truth than three different principles which give adequate explanations of the same facts severally. Celtic Spirituality

A collection of eight essays, formerly lectures of the Centre for the study of Christianity and Culture presented in Oxford in 1999.

The Quest for Celtic Christianity

Using history, and a thoughtful examination of legends, Fay Sampson weaves the strands of Celtic Christianity like Celtic knotwork into a continuous story, exciting and unsentimental. As the Roman empire crumbled, Celtic Christians threw themselves into pilgrimage and quest. They found their visionary islands on Skellig Michael, Iona, Lindisfarne ... Yet their spirituality was essentially concerned with politics and people. Brigid ruled a monastery for women and men, princesses and slaves, while Arthur was defending Celtic Britain against English invaders. Columban was deported from Burgundy. Aidan died protesting against his king. Some did slam the monastery gates on the sinful world. More tramped into the hills, staff in hand, to stand alongside ordinary people.

Love of nature is often said to be one of the characteristic features of Celtic Christianity. This work describes how native beliefs about nature were rejected, transformed or restated as the peoples of early medieval Ireland and the Hebrides made Christianity their own. With close reference to the literature of the period it examines the importance of land, hills and mountains, water, trees, fire, the sun and the elements in early Christian and biblical imagery. At a time when Celtic Christianity is increasingly romanticized, this work sets out to put the subject back onto a solid scholarly footing.

Celtic Christianity

Contains stories of the lives of the Celtic saints as well as descriptions of the major Celtic sites and festivals, and traditional prayers and blessings of the Celtic church.

UMA VIAGEM ATRAVÉS DO TEMPO PARA DESCOBRIR CONHECIMENTOS E SEGREDOS DOS MISTERIOSOS ESSÊNIOS Jesus realmente morreu na cruz? Quem foi Maria Madalena e qual a sua verdadeira conexão com Jesus? Novas e extensas informações sobre as sigilosas escolas de mistérios dos essênios. Uma das grandes tragédias da cultura ocidental é o esquecimento e posterior negação das raízes essênias por parte do cristianismo. Essas raízes são exploradas neste livro segundo a perspectiva de regressões a vidas passadas. Emergiram informações novas e fascinantes, inclusive vínculos entre essênios e druidas, a existência de um núcleo principal e secreto em torno de Jesus e contatos com a Ordem de Melquisedeque. Talvez o mais notável de tudo isso seja a possibilidade de vermos Jesus como essênio, trazendo à vida o Ser sábio e amoroso que foi obscurecido por tantas doutrinas e dogmas. Suas palavras chegam até nós através dos séculos e permitem uma compreensão

mais clara do Caminho estabelecido por ele e da meta final desse Caminho. Este livro deixa claro que Jesus não estava sozinho. Ele teve o apoio de uma equipe poderosa e dedicada de essênios, inclusive José de Arimateia. Graças à técnica de regressão a vidas passadas, agora esta história pode ser contada pela primeira vez, abrindo uma janela fascinante para um momento único e vital da História.

The Celtic Connection

This booklet looks at the Culdees, an enigmatic group of early Christians in Scotland whose roots more than likely went back as far as the first century AD.

Celtic Christianity and Nature

On the relation between religion and science

Since the publication in 1896 of Andrew Dickson White's classic *History of the Warfare of Science with Theology in Christendom*, no comprehensive history of the subject has appeared in the English language. Although many twentieth-century historians have written on the relationship between Christianity and science, and in the process have called into question many of White's conclusions, the image of warfare lingers in the public mind. To provide an up-to-date alternative, based on the best available scholarship and written in nontechnical language, the editors of this volume have assembled an international group of distinguished historians. In eighteen essays prepared especially for this book, these authors cover the period from the early Christian church to the twentieth century, offering fresh appraisals of such encounters as the trial of Galileo, the formulation of the Newtonian worldview, the coming of Darwinism, and the ongoing controversies over "scientific creationism." They explore not only the impact of religion on science, but also the influence of science and religion. This landmark volume promises not only to silence the persistent rumors of war between Christianity and science, but also serve as the point of departure for new explorations of their relationship. Scholars and general readers alike will find it provocative and readable.

God and Nature

Have science and Christianity been locked in mortal combat for the past 2000 years? Or has their relationship been one of peaceful coexistence, encouragement, and support? Both opinions have been vigorously defended, widely disseminated, and hotly debated. And both have been rejected by knowledgeable historians as unacceptable oversimplifications of the historical reality. This book steps back from those debates, abandoning, for the present, the attempt to formulate or defend generalizations of such breadth and scope. Its authors believe that every encounter had its own peculiar shape and that each must be examined uniquely before broader attempts at generalization are likely to succeed. This book, in language accessible to the general reader, investigates twelve of the most notorious, most interesting, and most instructive cases, aiming to tell each story in its historical specificity and local particularity. Among the episodes treated in *When Science and Christianity Meet* are the Galileo affair, the 17th-century clockwork universe, Noah's ark and flood in the development of natural history, struggles over Darwinian evolution, debates about the origin of the human species, and the Scopes trial. Readers will be introduced to St. Augustine, Roger Bacon, Pope Urban VIII, Isaac Newton, Pierre-Simon de Laplace, Carl Linnaeus, Charles Darwin, T. H. Huxley, Sigmund Freud, and many other participants in the historical drama of science and Christianity. Contributors: *William B. Ashworth Jr. *Thomas H. Broman *Janet Browne *Mott T. The Relations Between Religion and Science

All too often scholars of science and religion have focused their attention almost exclusively on the Christian experience. At a time when religious ignorance and misunderstanding have lethal consequences, such provincialism must be avoided. This book expands our knowledge of science and religion beyond its largely Christian base to include the other Abrahamic faiths and the indigenous traditions of Africa and Asia.

When Science and Christianity Meet

The book of "Science and Christian Faith: Their Relationship in the Past, Present and Future" is a book dealing with natural sciences and my personal, evangelical Christian faith, their relationship in time of past, present and future." It is a semi-science popular reference book. In western civilization, Christianity and science are historically two Rocks. Christianity was borne when Jesus commenced his ministry among the Jewish people. In a short period of time, Christianity was popularized by his disciples; and extended to the other parts of the world. So, we have Christianity and her ecclesiastic doctrines; and his followers as Christians and Christian Church. In 16-17th centuries, modern experimental sciences were borne. Three Christian scholars, i. e. Nicholas Copernicus, Johannes Kepler and Galileo Galilei first formulated the helio-centered universe. Thereby, Christianity was the mother of experimental sciences. In addition, Galileo even suggested a metaphor of Two Books, explaining the mutually explainable relationships between science and faith. Unfortunately, the Roman Catholic Church made a mistake by condemning Galileo as heretic, then to house arrest and consequently died of old age. This left a bad taste in the mouth of scientists. With this, a schism between Christian faith and science was created. In 1858, Charles Darwin published his "Origin of Species" with an "evolution theory." The "War Hypothesis" between these two scholarly disciplines was proposed by two American scholars. Several American atheists contributed their efforts to make the conflict being even worsen. All these have been extended to the 21st century. Beginning in early years of 20th century, eminent scholars such as Albert Einstein, John Polkinghorne, Bernard Ramm and many others endeavored to build bridge of mutual understanding and reconciliation between the two camps. Einstein said that "All religions, arts and sciences are branches of the same tree. All these aspirations are directed toward ennobling man's life from the sphere of mere physical existence, and leading the individuals towards freedom." The US National Academy of Sciences endorsed Einstein's conviction. In recent years, British and American scholars and theologians, following both Galileo's metaphor of two books and Einstein's conviction (as given above) have continued to build bridges of mutual understanding and conciliation between science and Christian faith. My book on "Science and Christian faith" is written as wee contribution to this noble undertaking.

Science and Christian Faith

In this 1991 volume, John Hedley Brooke offers an introduction and critical guide to one of the most fascinating and enduring issues in the development of the modern world: the relationship between scientific thought and religious belief. It is common knowledge that in western societies there have been periods of crisis when new science has threatened established authority. The trial of Galileo in 1633 and the uproar caused by Darwin's Origin of Species (1859) are two of the most famous examples. Taking account of recent scholarship in the history of science, Brooke takes a fresh look at these and similar episodes, showing that science and religion have been mutually relevant in so rich a variety of ways that no simple generalizations are possible. A special feature of the book is that Brooke stands back from general theses affirming 'conflict' or 'harmony', which have so often served partisan interests. His object is to reveal the subtlety, complexity, and diversity of the interaction as it has taken place in the past and in the twentieth century.

The Relations of Science and Religion

Science and Christianity is an accessible, engaging introduction to topics at the intersection of science and Christian theology. A philosophically orientated treatment that introduces the relationship of science to Christianity and explores to what extent the findings of science affect traditional Christian theology Addresses important theological topics in light of contemporary science, including divine action, the problem of natural evil, and eschatology Historically oriented chapters and chapters covering methodological principles for both science and theology provide the reader with a strong foundational understanding of the issues Includes feature boxes highlighting quotations, biographies of major scientists and theologians, key terms, and other helpful information Issues are presented as fairly and objectively as possible, with strengths and weaknesses of particular interpretations fully discussed

The Blackwell Companion to Science and Christianity

When it comes to relating Christianity to modern Western culture, perhaps no topic is more controversial than the relationship between Christianity and science. Outside the church, the myth of a backwards, anti-science Christianity is very common in popular culture and can poison the well before a fruitful dialogue can begin. Within the church, opposing viewpoints on the relation between Christianity and science often lead to division. Three Views on Christianity and Science addresses both types of conflict. Featuring leading evangelical scholars, this book presents three primary options for the compatibility of Christianity and science and models constructive dialogue on the surrounding controversial issues. The highlighted contributors and their views are: Michael Ruse, representing the Independence View - When functioning correctly, science and Christian theology operate independently of each other, seeking answers to different questions through different means. Alister McGrath, representing the Dialogue View - Though the natural sciences and Christian philosophy and theology function differently, they can and should inform each other. Bruce L. Gordon, representing the Constrained Integration View - Science, philosophy, and theology all contribute to our understanding of reality. Their interactions constrain each other and together present an optimally coherent and integrated picture of reality. By engaging with the viewpoints of the contributors, readers will come away with a deeper understanding of the compatibility of science and Christianity, as well as of the positions of those who disagree with them. Scholars, students, pastors, and interested laypeople will be able to make use of this material in research, assignments, sermons and lessons, evangelism, and apologetics. The Counterpoints series presents a comparison and critique of scholarly views on topics important to Christians that are both fair-minded and respectful of the biblical text. Each volume is a one-stop reference that allows readers to evaluate the different positions on a specific issue and form their own, educated opinion.

Science & Christianity

"The Relations Between Religion and Science" from Frederick Temple. Frederick Temple, english academic, teacher, churchman, and Archbishop of Canterbury (1821-1902).

Science and Christianity

Each world faith tradition has its own distinctive relationship with science, and the science-religion dialogue benefits from a greater awareness of what this relationship is. In this book, members of the International Society for Science and Religion (ISSR) offer international and multi-faith perspectives on how new discoveries in science are met with insights regarding spiritual realities. The essays reflect the conviction that "religion and science each proceed best when they're pursued in dialogue with each other, and also that our fragmented and divided world would benefit more from a stronger dialogue between science and religion." In Part One, George F. R. Ellis, John C. Polkinghorne, and Holmes Rolston III, each a Templeton Prize winner, discuss their views on why the science and religion dialogue

matters. They are joined in Part Two by distinguished theologians Fraser Watts and Philip Clayton, who place the dialogue in an international context; John Polkinghorne's inaugural address to the ISSR in 2002 is also included. In Part Three, five members of the ISSR look at the distinctive relationships of their faiths to science: •Carl Feit on Judaism •Munawar Anees on Islam •B.V. Subbarayappa on Hinduism •Trinh Xuan Thuan on Buddhism •Heup Young Kim on Asian Christianity George Ellis, the recently elected second president of ISSR, summarizes the contributions of his colleagues. Ronald Cole-Turner then concludes the book with a discussion of the future of the science and religion dialogue.

A History of the Warfare of Science with Theology in Christendom

How does science enhance faith? Is God relevant in an age of science? *Science and Faith: Student Questions Explored* investigates the relationship between science and Christianity in a series of thoughtful and accessible articles written by experts. Chosen from InterVarsity's Emerging Scholars Network blog, each chapter addresses common faith- and science-related questions. In part one, *Science and Faith* delves into why Christians should pursue scientific discovery, as well as the Bible's viewpoint on scientific method and inquiry. Part two begins the conversation on the direct relevance of science to faith and how Christian scientists can talk to their colleagues about their faith, while part three discusses how conversations about science can take place between Christians. Finally, part four explores the history of science and the church and the question How can the history of science encourage the church? While ideal for graduate students who are exploring their faith and their chosen scientific fields, this book can also be used in church settings or as a personal resource. The book provides questions to launch small group conversation about faith/science, whether you're a science PhD, a ministry leader, or an interested layperson. Since each reading is based on questions from real students, it may also be a resource for Christian faculty teaching the sciences. Contributors include Ruth Bancewicz, Gerald Rau, Greg Cootsona, Andy Walsh, and more.

The Relations Between Religion and Science

Science and the Eastern Orthodox Church explores core theological and philosophical notions and contentious topics such as evolution from the vantage point of science, Orthodox theology, and the writings of popular recent Orthodox critics as well as supporters. Examining what science is and why Eastern Orthodox Christians should be concerned about the topic, including a look at well known 20th century figures that are considered holy elders or saints in the Orthodox Church and their relationship and thoughts about science, contributors analyse the historical contingencies that contribute to the relationship of the Orthodox Church and science both in the past and present. Part II includes critiques of science and considers its limitations and strengths in light of Orthodox understandings of the experience of God and the so called miraculous, together with analysis of two Orthodox figures of the 20th century that were highly critical of science, it's foundations and metaphysical assumptions. Part III looks at selected topics in science and how they relate to Orthodox theology, including evolution, brain evolution and consciousness, beginning of life science, nanotechnology, stem cell research and others. Drawing together leading Orthodox scientists, theologians, and historians confronting some of the critical issues and uses of modern science, this book will be useful for students, academics and clergy who want to develop a greater understanding of how to relate Orthodoxy to science.

Why the Science and Religion Dialogue Matters

An author on the cutting edge of today's theology and science discussions argues that creedal Christianity has much to contribute to the ongoing conversation. This book contains an intellectual history of theology's engagement with science during the modern period, critiques current approaches, and makes a constructive proposal for how a Christian theological vision of natural knowledge can be better pursued. The author explains that it is good both for religion and for science when Christians treat theology as their first truth discourse. Foreword by David Bentley Hart.

The Relations Between Religion and Science

"Has science made religion intellectually implausible? Does it rule out the existence of a personal God? In an age of science can we really believe that the universe has a "purpose"? And, finally, doesn't religion hold much of the blame for the present ecological crisis?" "These questions form the nucleus of today's debate between science and religion. This book is a guide for that debate, identifying the questions, isolating the issues and pointing to ways the questions can be resolved." "There are four possible ways, says John F. Haught, that we can view the relationship between religion and science. First, they can stand in complete opposition - the conflict position. Or, we can believe they are so different that conflict is impossible - the contrast position. A third approach holds that while science and religion are distinct, each has important implications for the other. A fourth way views them as different but mutually supportive."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

Science and Faith

This book, first published in 2000, adopts a balanced perspective on the subject to offer a serious examination of both Darwinism and Christianity. He covers a wide range of topics, from the Scopes Monkey Trial to claims about the religious significance of extraterrestrials. He deals with major figures in the current science/religion debate and considers in detail the claims of the new creationism, revealing some surprising parallels between Darwinian materialists and traditional thinkers such as St. Augustine. Michael Ruse argues that, although it is at times difficult for a Darwinian to embrace Christian belief, it is by no means inconceivable. At the same time he suggests ways in which a Christian believer should have no difficulty accepting evolution in general, and Darwinism in particular.

Science and the Eastern Orthodox Church

W. Mark Richardson and Gordy Slack, philosopher and science writer respectively, conducted interviews with twelve of the world's top scientists on subjects ranging from the existence and nature of God to the role of religion and spirituality in modern scientific work. What's revealed is a broad diversity of perspectives on the relationship between science and religion. The approaches are as surprising as they are varied, but all defy the stereotypes embedded in so much of the popular science versus religion debates.

A Christian Theology of Science

At the end of a five-year journey to find out what religious Americans think about science, Ecklund and Scheitle emerge with the real story of the relationship between science and religion in American culture. Based on the most comprehensive survey ever done-representing a range of religious traditions and faith positions-Religion vs. Science is a story that is more nuanced and complex than the media and pundits would lead us to believe. The way religious Americans approach science is shaped by two fundamental questions: What does science mean for the existence and activity of God? What does science mean for the sacredness of humanity? How these questions play out as individual believers think about science both challenges stereotypes and highlights the real tensions between religion and science. Ecklund and Scheitle interrogate the widespread myths that religious people dislike science and scientists and deny scientific theories. Religion vs. Science is a definitive statement on a timely, popular subject. Rather than a highly conceptual approach to historical debates, philosophies, or

personal opinions, Ecklund and Scheitle give readers a facts-on-the-ground, empirical look at what religious Americans really understand and think about science.

Science and Religion

Galileo. Newton. Darwin. These giants are remembered for their great contributions to science. Often forgotten, however, is the profound influence that Christianity had on their lives and work. This study explores the many ways in which religion—its ideas, attitudes, practices, and institutions—interacted with science from the beginnings of the Scientific Revolution to the end of the nineteenth century. Both scientists and persons of faith sometimes characterize the relationship between science and religion as confrontational. Historian Richard G. Olson finds instead that the interactions between science and religion in Western Christendom have been complex, often mutually supportive, even transformative. This book explores those interactions by focusing on a sequence of major religious and intellectual movements—from Christian Humanist efforts to turn science from a primarily contemplative exercise to an activity aimed at improving the quality of human life, to the widely varied Christian responses to Darwinian ideas in both Europe and North America during the second half of the nineteenth century.

The Relations of Christianity and Science

The biggest revolution in our understanding of the physical world since the days of Newton was brought about by the discovery of the elusive and fitful world of quantum theory. Now the insights of Chaos theory offer the prospect of a further revolution, capable of describing a physical world endowed with a genuine openness to the future. In his acclaimed trilogy - *One World*, *Science and Creation* and *Science and Providence* - John Polkinghorne brilliantly transmitted the excitement of these new discoveries to the lay reader and showed how they opened the way to a new a more harmonious relationship between science and religion. Now he returns to the science-theology debate, outlining his position for new readers and pursuing some of the outstanding issues with the same accessibility, clarity and insight that made the trilogy such an outstanding success.

Can a Darwinian be a Christian?

Now thoroughly updated to reflect the latest debates, this popular textbook introduces readers to the central questions in the field of science and religion. Ideally suited to those who have little or no prior knowledge in either area, it incorporates numerous student-friendly features, including maps, summaries, and historical references, resulting in the most up-to-date introduction to the study of religion and the natural sciences available. Examines the historical, theological, philosophical and scientific aspects of the interaction between religion and science Fully updated to reflect current, cutting-edge debates on scientific atheism and the limits of scientific method, and discussions about the relationship between science and religion in major world faiths Includes a historical component to enable readers to orientate themselves within the subject Takes a topic based approach which fits into the existing structure of most courses, and includes explanatory material not found in other works of this kind, making it highly accessible for those with little scientific or religious background knowledge Incorporates illustrations, tables, maps, summaries and questions for a lively and engaging approach to the subject Written by world-renowned theologian, Alister McGrath; author of bestselling books such as *Dawkins' God*, and an acknowledged expert in the field of science and religion

Faith in Science

How do we react to the claim that physics must now be regarded as one of the liberal arts, for in its description of the universe it sets the stage for the drama of human life? If modern science has now become the dominant culture, how does Christianity look within it? What difference does the Christian idea of the contingency of nature make to science today? What difference does it make for Christian thought and culture to move away from the old idea of the world as a closed mechanical system of cause and effect into the new idea of the world as an open dynamic system configured by the behavior of light, the fastest messenger in the universe? These are some of the questions discussed in the light of James Clerk Maxwell's discoveries of the mathematical properties of light, and of Albert Einstein's generalization of the new understanding of light for a radically new and exciting view of nature that has made space travel possible and enabled us to trace the expansion of the universe back to conditions near its beginning. This is not a defensive book about science and religion in the usual vein. It is concerned rather with the deep mutual relation and respect of Christian and scientific thought for each other, and shows how this relationship throws new light upon basic Christian doctrines. This volume

also warns against the dangers of a reactionary retreat from the rigors of scientific thought into fuzzy mythological interpretations of the incarnation, and calls for a deeper appreciation of the Nicene Creed upon which all Christendom rests.

Religion vs. Science

The conflict between science and religion seems indelible, even eternal. Surely two such divergent views of the universe have always been in fierce opposition? Actually, that's not the case, says Peter Harrison: our very concepts of science and religion are relatively recent, emerging only in the past three hundred years, and it is those very categories, rather than their underlying concepts, that constrain our understanding of how the formal study of nature relates to the religious life. In *The Territories of Science and Religion*, Harrison dismantles what we think we know about the two categories, then puts it all back together again in a provocative, productive new way. By tracing the history of these concepts for the first time in parallel, he illuminates alternative boundaries and little-known relations between them—thereby making it possible for us to learn from their true history, and see other possible ways that scientific study and the religious life might relate to, influence, and mutually enrich each other. A tour de force by a distinguished scholar working at the height of his powers, *The Territories of Science and Religion* promises to forever alter the way we think about these fundamental pillars of human life and experience.

The Relations Between Religion and Science

These essays address broad topics such as the popularization of scientific ideas, secularization and the development of the naturalistic worldview.

Science and Religion, 1450–1900

Science versus Christianity? Reason versus Faith? The relationship between science and Christianity is all too often framed within such modernist polarizations, even though we are now living in a postmodern world! But from a Christian perspective, if such conflict theses are to be discredited, what assumptions about the scientific endeavor, the nature of nature, reason, revelation, and knowledge should undergird the relation between science and Christianity? *Science & Grace* critically examines contemporary assumptions and then positively re-describes scientific endeavors in ways that encourage faithful and joyful Christian involvement in the science of our day, both as "consumers" of the fruits of scientific work and as producers of new scientific insights into God's works on display in His universe. In *Science & Grace*, the authors go beyond the more common focus on creation, evolution, and intelligent design to address more novel questions concerning science and Christianity. The first section reviews a variety of developments both inside and outside of science to indicate that the Enlightenment hope of a simple picture of science, providing its own foundation and sustaining power, doesn't work. The section goes on to locate a faithful Christian approach to science in the midst of the general cultural shift from modernism to postmodernism as one that thoroughly embraces the need for each worldview to give its own account of how science "works." For the Christian, this indicates the need for a theology of science. The second section approaches the relation of God to His creation through a robust trinitarian theology that highlights the divine action of the transcendent purposes of the Father, mediated through the Son, and brought to fruition by the immanent presence of the Spirit. The triune God's covenantal faithfulness to His creation is then the reason for the regularities we perceive as scientific laws. In this context, the dualistic tendency to pit "natural processes" against "supernatural intervention" perceived as miracles is shown to be an unnecessary consequence of the history of the rise of mechanism. We can thus understand science from a Christian perspective as one avenue of many through which we are able to see and respond to God's faithfulness to His covenant promises. The third section examines how doing science from a Christian perspective naturally flows from the Great Commandment to love God and neighbor, or put it another way, to love God with all our being, knowing, and doing. In terms of being, this section re-orientes the meaning of our scientific work and its significance in history by exploring who humans are and what creation is in terms of their relation to God and how those relationships are impacted by the major episodes in redemptive history: Creation, Fall, Redemption, and Consummation. Then knowing is described in terms of faithfully responding to God's revelation in His Word and world, responses that include both submission to "order as given" and creative stewardship in handling "order as task." Pleasing God in our knowing should be the Christian's prime concern, rather than narrowly pursuing the satisfaction of humanly formulated knowing criteria. Finally concerning the doing aspect, being good stewards of our scientific gifts requires that we "do" as confident, attentive and submissive

servants who are committed to the gracious authority of His Word, His Church, and His World. In the final section, in seeking out ways to "do" as good neighbors in the scientific culture of our times, Science & Grace describes how Christians are to be good stewards of God's favor and His judgment in scientific work. We are to rejoice in the fruits of our common labors with our non-Christian colleagues but also we are not to neglect our obligation, in love, to warn them of the wrath of God that will judge persisting unbelief.

Reason and Reality

The New York Times bestselling author explains why any attempt to make religion compatible with science is doomed to fail. What we read in the news today is full of subjectivity, half-truths, and blatant falsehoods; and thus it is more necessary now than ever to safeguard the truth with facts. In his provocative new book, evolutionary biologist Jerry A. Coyne aims to do exactly that in the arena of religion. In clear, dispassionate detail he explains why the toolkit of science, based on reason and empirical study, is reliable, while that of religion—including faith, dogma, and revelation—leads to incorrect, untestable, or conflicting conclusions. Coyne is responding to a national climate in which over half of Americans don't believe in evolution (and congressmen deny global warming), and warns that religious prejudices and strictures in politics, education, medicine, and social policy are on the rise. Extending the bestselling works of Richard Dawkins, Daniel Dennett, and Christopher Hitchens, he demolishes the claims of religion to provide verifiable "truth" by subjecting those claims to the same tests we use to establish truth in science. Coyne irrefutably demonstrates the grave harm—to individuals and to our planet—in mistaking faith for fact in making the most important decisions about the world we live in.

Science and Religion

In recent years a noticeable trend toward harmonizing the distinct worldviews of science and religion has become increasingly popular. Despite marked public interest, many leading scientists remain skeptical that there is much common ground between scientific knowledge and religious belief. Indeed, they are often antagonistic. Can an accommodation be reached after centuries of conflict? In this stimulating collection of articles on the subject, Paul Kurtz, with the assistance of Barry Karr and Ranjit Sandhu, have assembled the thoughts of scientists from various disciplines. Among the distinguished contributors are Sir Arthur C. Clarke (author of *2001: A Space Odyssey*, and numerous other works of science fiction); Nobel Prize Laureate Steven Weinberg (professor of physics at the University of Texas at Austin); Neil deGrasse Tyson (Princeton University astrophysicist and director of the Hayden Planetarium); James Lovelock (creator of the Gaia hypothesis); Kendrick Frazier (editor of the *Skeptical Inquirer*); Steven Pinker (professor of psychology at MIT); Richard Dawkins (zoologist at Oxford University); Eugenie Scott (physical anthropologist and executive director of the National Center for Science Education); Owen Gingerich (professor of astronomy at Harvard University); Martin Gardner (prolific popular science writer); the late Richard Feynman (Nobel Prize-winning physicist) and Stephen Jay Gould (professor of geology at Harvard University); and many other eminent scientists and scholars. Among the topics discussed are the Big Bang and the origin of the universe, intelligent design and creationism versus evolution, the nature of the "soul," near-death experiences, communication with the dead, why people do or do not believe in God, and the relationship between religion and ethics.

Christian Theology and Scientific Culture

Written by distinguished historians of science and religion, the thirty essays in this volume survey the relationship of Western religious traditions to science from the beginning of the Christian era to the late twentieth century. This wide-ranging collection also introduces a variety of approaches to understanding their intersection, suggesting a model not of inalterable conflict, but of complex interaction. Tracing the rise of science from its birth in the medieval West through the scientific revolution, the contributors describe major shifts that were marked by discoveries such as those of Copernicus, Galileo, and Isaac Newton and the Catholic and Protestant reactions to them. They assess changes in scientific understanding brought about by eighteenth- and nineteenth-century transformations in geology, cosmology, and biology, together with the responses of both mainstream religious groups and such newer movements as evangelicalism and fundamentalism. The book also treats the theological implications of contemporary science and evaluates recent approaches such as environmentalism, gender studies, social construction, and postmodernism, which are at the center of current debates in the historiography, understanding, and application of science. Contributors: Colin A. Russell, David

The Territories of Science and Religion

The leading introductory textbook on the study of religion and the natural sciences, including new coverage of the latest topics in the field Science and Religion provides students with a thorough introduction to the major themes and landmark debates in the interaction of science and religion. Incorporating history, philosophy, the natural sciences, and theology, this popular textbook examines how science and religion approach central questions and discusses the relationship between the two areas through the centuries. The authoritative and accessible chapters are designed for readers with minimal knowledge of science or theology. Written by one of the world's leading authorities on the study of religion and science, this fully revised and updated third edition addresses contemporary topics and reflects the latest conceptual developments in the field. New and expanded chapters and case studies discuss Scientism, evolutionary theodicy, the Theory of Relativity, warranted belief in science and religion, the influence of science and religion on human values, and more. The most up-to-date introduction to this exciting and rapidly growing field, this textbook: Offers an engaging, thematically-based approach to the subject Provides historical context for major events in science and religion Explores scientific and religious perspectives on Creation and the existence of God Discusses models, analogies, and issues at the intersection of science and religion One of the most respected and widely adopted textbooks in the field, Science and Religion: A New Introduction, 3rd Edition is an ideal resource for college, seminary, and university students in courses in science and religion; church or community courses in the relation of science and faith; and general readers looking for an inclusive overview of the field.

Science and Christianity in Pulpit and Pew

The first volume of the new series Science and the Orthodox Church focuses on the nature of the relationship between modern Science and Orthodox Christianity with its centuries-old tradition. Orthodoxy today shares a variety of--sometimes ambiguous--attitudes towards modern Science shaped by the texts of the Church Fathers, medieval and modern theologians and scholars, as well as contemporary social realities. On the other hand, modern Science, which sprung from the seventeenth-century quest by Western-European philosophers for rationality, is faced with crucial and uneasy questions about the meaning of life and the position of Humankind within the natural world. The main goal of the volume is to define the patterns of the Science-religion relationship in the Orthodox world, especially in the light of the most recent trends in both Science and Theology. Is this a relationship of dialog or conflict? Of integration or independence? What is the impact of the revival of patristic studies and new theological currents on the relationship? But also what is the relevant impact of new scientific discoveries on the image of the Human and the Universe? Has the modern Science-religion dialog in the West influenced Eastern Christianity in its effort to create new perspectives and concepts in response to new challenges? These questions are crucial for understanding and mapping the current science-religion dialog in the Orthodox world, and apart from recording given views and opinions.

Treasury of Christian Classics

"One of the top 10 Christian books of the twentieth century." --Christianity Today Gilbert Keith Chesterton (1874-1936) has been called "the ablest and most exuberant proponent of orthodox Christianity of his time." One of the twentieth century's most thoughtful authors, he greatly influenced countless Christian writers including C.S. Lewis and others. Described as one of 10 "indispensable spiritual classics" of the past 1500 years by Publishers Weekly, Chesterton's *Orthodoxy* offers a unique explanation of the essentials of the Christian faith, and of his own journey from skepticism to belief. "It is constantly assumed, especially in our Tolstoian tendencies, that when the lion lies down with the lamb the lion becomes lamb-like. . . . That is simply the lamb absorbing the lion instead of the lion eating the lamb. The real problem is--can the lion lie down with the lamb and still retain his royal ferocity? That is the problem the Church attempted; that is the miracle she achieved." --from *Orthodoxy* Every Christian library needs the classics--the timeless books that have spoken powerfully to generations of believers. Hendrickson Christian Classics allow readers to build an essential classics library in affordable modern editions. Each volume is freshly typeset for reading comfort, while thoughtful new introductions place each in historical and spiritual context. Attractive, classically bound covers look great together on the shelf. Best of all, value pricing makes this series easy to own. Planned to span the spectrum of Christian wisdom through the ages, Hendrickson Christian Classics set a new standard for quality and value.

Complete Christian Classics

As valuable as when they were first published a century ago, Torrey's two disciple-making classics--both brimming with practical wisdom--encourage believers to grow in the knowledge and love of God. This book describes varieties of biblical "prayer that availeth much." This book also details seven fruitful methods of inductive Bible study. Now together for the first time in one binding!

Orthodoxy

The Quiknotes series offers concise resources on topics important to Christians or those researching the Bible. *Christian Classics* summarizes forty-five of the most influential Christian writings (besides the Bible) and provides a short biography of each writer.

How to Pray and How to Study the Bible

There is a wealth of great literature to study in the history of man, some written by Christians and some by non-Christians. However, the Christian student should direct special attention to literature produced by Christians. The empires of man will always crumble and fall, but the kingdom of Jesus Christ will continue forever. This collection covers five of the greatest life narratives of all time. A thorough study of these great books will help students understand the life, theology, and worldview of some of the greatest Christian men in church history. Sit at the feet of some of the best teachers God has given to His church. *Augustine Confessions*: (354-430) Augustine is perhaps the most influential thinker of the first thousand years of Christian history. This fifth-century Christian wrote *Confessions* as a biography in the form of a prayer to God. *Patrick Confessions*: (387-493) Amid the chaos following the collapse of the Roman Empire, Patrick, a man of legendary faith, led the way to the evangelization of the wild and pagan tribes of Ireland. *John Knox History of the Reformation In Scotland* (c.1510-1572) Few men have lived in more dangerous times than John Knox of Scotland. Yet he led a reformation movement in a very dangerous land, leaving a testimony for generations to come. *John Bunyan Grace Abounding* (1628-1688) Great men tell great stories because they live them. This is the case with John Bunyan, whose personal testimony, *Grace Abounding*, records one of the most tumultuous and agonizing spiritual journeys. *John Paton Autobiography* (1824-1907) The kingdom of God is only taken by force by courageous men of faith like John Paton, whose missionary work among the cannibals in the New Hebrides is nothing short of legendary.

The Christian Classics

A volume comparable in style to Cliff's Notes, here highlighting the key points from Augustine's City of God.

Western Asceticism

John Wesley (1703-1791) was an Anglican clergyman and Christian theologian who became an early leader in the Methodist movement. A Plain Account of Christian Perfection represents John Wesley's historic teaching on Christian perfection and holiness. Although it is one of his key works, it is rarely reissued and is not available as a single volume in hardcover--until now. Humility

"God makes it quite clear in his Word that he has only one answer to every human need--his Son, Jesus Christ. In all his dealings with us he works by taking us out of the way and substituting Christ in our place. The Son of God died instead of us for our forgiveness: he lives instead of us for our deliverance. So we can speak of two substitutions--a Substitute on the Cross who secures our forgiveness and a Substitute within who secures our victory." An early leader in what became China's phenomenal house church movement, Watchman Nee (1903-1972) spent the last 20 years of his life in a communist prison. This powerful meditation brings the daily reality of following Christ into sharp focus. F. B. Meyer

This clear and comprehensive anthology, culled from the vast corpus of Christian mystical literature by the renowned theologian and historian Bernard McGinn, presents nearly one hundred selections,

from the writings of Origen of Alexandria in the third century to the work of twentieth-century mystics such as Thomas Merton. Uniquely organized by subject rather than by author, *The Essential Writings of Christian Mysticism* explores how human life is transformed through the search for direct contact with God. Part one examines the preparation for encountering God through biblical interpretation and prayer; the second part focuses on the mystics' actual encounters with God; and part three addresses the implications of the mystical life, showing how mystics have been received over time, and how they practice their faith through private contemplation and public actions. In addition to his illuminating Introduction, Bernard McGinn provides accessible headnotes for each section, as well as numerous biographical sketches and a selected bibliography. Praise for *The Essential Writings of Christian Mysticism* "No one is better equipped than Bernard McGinn to provide a thorough and balanced guide to this vast literature.... This is an anthology which deserves to be read not only by those who study Christian history and theology, but by believers who long to deepen their own lives of prayer and service." -- Anglican Theological Review "Bernard McGinn, a preeminent historian and interpreter of the Christian mystical tradition, has edited this fine collection of mystical writings, organizing them thematically.... McGinn offers helpful introductions to each thematic section, author and entry, as well as a brief critical bibliography on mysticism. Published in the Modern Library Classic series, this is a great value." -- Christian Century "No-one is better equipped than Professor McGinn to provide a thorough and balanced guide to this vast literature. A first-class selection, by a first-class scholar." -- Rowan Williams, Archbishop of Canterbury "This accessible anthology by the scholarly world's leading historian of the Western Christian mystical tradition easily outstrips all others in its comprehensiveness, the aptness of its selection of texts, and in the intelligent manner of its organization." -- Denys Turner, Horace Tracy Pitkin Professor of Historical Theology, Yale Divinity School "An immensely rich anthology, assembled and introduced by our foremost student of mysticism. Both the scholar and the disciple will find God's plenty here." -- Barbara Newman, Professor of English, Religion, and Classics, John Evans Professor of Latin, Northwestern University "An unusually clear and insightful exposition of major texts selected by one of the greatest scholars in the field of Christian mysticism, based on his vast erudition and uniquely sensitive interpretation. Like his other books, this one too is destined to become a classic." -- Professor Moshe Idel, Hebrew University, Jerusalem

English Reformers

"For more than a century *In His Steps* has helped Christians live more Christlike lives. I can't think of a novel that's had a greater impact on the faith of so many believers." --Nick Harrison, author of *365 WWJD? Daily Answers to 'What Would Jesus Do?'* "What would Jesus do?" When several members of an ordinary American church are challenged to not take a single action without first asking that crucial question, they discover the power of God to transform their own lives--and their world. Charles M. Sheldon's provocative novel, originally published in 1896 and enthusiastically rediscovered by today's believers, testifies dramatically to the value of Christian witness in all of life. Hendrickson Christian Classics is planned to include all the timeless books that generations of believers have treasured. Each volume in the series is freshly retypeset, while thoughtful new prefaces explore their spiritual and historical contexts. For contemporary readers, this is the essential library of Christian wisdom through the ages.

A Plain Account of Christian Perfection

This new collection of essays edited by Kyle Strobel and Jamin Goggin offers an evangelical hermeneutic for reading the Christian spiritual classics. Addressing the why, what and how of reading these texts, these essays challenge us to find our own questions deepened by the church's long history of spiritual reflection.

The Normal Christian Life

This is one of the most beloved books on prayer, written by a man whose entire life was devoted to prayer. *With Christ in the School of Prayer* presents a thirty-one day tutorial: each chapter presents a new aspect of prayer, in a concise way that is at the same time rich and joyful, coming from the author's vital relationship with God. A favorite book for generation after generation, it is as fresh today as when it was first published in the 1890's. Great for both novice and veteran, this book is a must-have for every personal and church library. Hendrickson presents a lovely edition, re-typeset and redesigned, making it a perfect gift for anyone who wants to replace an old paperback or for those who have never discovered this rich volume. The Essential Writings of Christian Mysticism

A succinct, readable survey of key Christian thinkers and significant theological developments from the church's inception to the present.

In His Steps

"Why callest thou me good? there is none good but one, that is God" (Matthew 9:17). THE world has accepted Jesus Christ as a good man. The evidences of his goodness are manifold. He was full of compassion. He never looked upon the people as a crowd. He never thought of them as a mass. He saw them always as individuals. His heart went out to them. All his impulses were to pity them, sympathize with, and help them. He went among them. He entered into all conditions, accepted all situations. He was present at a wedding, he ate with publicans and sinners and, anon, was guest at a rich man's table. He saw the ravages of disease, the shame of sin, the tragedies in life. He knew there was torture in body and anguish in spirit. He took the mystery of pain and laid it upon his heart, until tears were his meat and his drink, by day and by night. He became a man of sorrows and an expert in grief. He took upon him the woes of the world till he was bowed and bent, as with the weight of years. The tears of sympathy grooved his cheeks, as when streams carve their way down mountain sides. Because of this men looked at him and saw neither form nor comeliness; neither was there any beauty in him that they should desire him. He was a beneficent man. Multitudes of men are benevolent, but not beneficent. Benevolence is well wishing. Beneficence is well doing. He was always well doing, giving sight to the blind, healing the sick, cleansing the leper, feeding the hungry, raising the dead, unloosing the bonds of Satan—unwinding the serpent's coil. He was absolutely unselfish. He emptied himself and made room in his soul for other lives. He had no office hours and never interposed secretaries or major-domos between himself and the people. He received all who came unto him—ministering without money and without price. There is one scene that might well be painted by a master hand. It is evening. The western sky is all aglow with the glory of the setting sun. Far up in the dome of the infinite blue, the evening star swings golden, like a slow descending lamp let down by invisible hands. The street is in half-tone. It is packed by the strangest of throngs, by the blind, the lame, the halt, the paralyzed and the leper-derelicts of humanity—borne thither on a surging tide of life in which every wave is an accent of pain; they are driven and piled up in great, quivering heaps against a door which

is partly shut, as in self-defence, by the sweltering crowd within. Jesus of Nazareth is in that house. He is healing the sick. He is giving health, and strength, and peace to all who seek him. He turns no one away. Compassion, sympathy, beneficence, the tenderness of a mother for her helpless babe—these are the characteristics which his daily ministry revealed. No one ever brought a charge of evil doing or evil speaking against him. The people who followed him said, “He hath done all things well.” Police officers sent to arrest him as a disturber of the peace found him in the midst of the people, speaking words that hushed their tumult, quieted their murmurings and gave them rest; and the officers returning to them who sent them, said, “Never man spake like this man.” Pilate’s wife dreamed a troubled dream of him, and sent word to her husband not to lay hands on him—seeing that he was a just man. Thrice before heaven and earth—in a testimony that still echoes through infinite spaces, and is heard by listening worlds—Pilate himself proclaimed, “I find no fault in this man.”

Christian Reading Companion for 50 Classics

This book initiates a new conversation about how theological education might be re-envisioned for the twenty-first century church. The prevailing curricular structure in today’s seminaries and divinity schools was fashioned in a very different era, one that assumed the continued cultural dominance of Christianity and the continued academic dominance of the canons of Enlightenment reason. Neither assumption is viable in today’s post-Christian world; hence, our new circumstances demand a new vision for theological education. The authors of this volume offer an important resource for this project through their creative appropriation of the classical rhetorical tradition, particularly as it has been rehabilitated in the contemporary context. Like St. Augustine, they believe that the chief goals of Christian theology are similar to those of classical rhetoric: to teach, to delight, and to move. And the authors are united in their conviction that these must also be the goals of theological education in a post-Christian era. This volume arises out of a passionate commitment to the cause of theological education. The authors hail from a wide range of denominational traditions and have taught in numerous seminaries and divinity schools. They have also studied the classical and postmodern rhetorical traditions in both theory and practice. They met as a group on numerous occasions to read one another’s contributions to the volume and to offer guidance for the process of rewriting. As a result, this book is much more than a mere collection of essays; it is a jointly-authored work, and one which presents an integrated vision for the future of theological education.

Morning by Morning

“The condition of God’s blessing is absolute surrender of all into His hands. If our hearts are willing for that, there is no end to what God will do for us, and to the blessings God will bestow.” --from *Absolute Surrender* Greatly concerned for the spiritual guidance of new converts, and for spiritual growth in long-time Christians, Murray penned some of the most enduring devotional classics of Christian literature. The two beloved works in this volume reflect Murray’s longing for a deeper life in Christ and his prayer that others would long for and experience that life as well. Hendrickson Christian Classics is planned to include all the timeless books that generations of believers have treasured. Each volume in the series is freshly typeset, while thoughtful new prefaces explore their spiritual and historical contexts. For contemporary readers, here is an essential library of Christian wisdom through the ages.

Reading the Christian Spiritual Classics

An important volume of scholarship, this book presents a collection of documents previously little known and inaccessible to the English-speaking world. This volume includes writings of the Radical Reformation--Anabaptist and Spiritualist--as well as three treatises by Juan de Valdes as a representative of Evangelical Catholicism. Long recognized for the quality of its translations, introductions, explanatory notes, and indexes, the Library of Christian Classics provides scholars and students with modern English translations of some of the most significant Christian theological texts in history. Through these works--each written prior to the end of the sixteenth century--contemporary readers are able to engage the ideas that have shaped Christian theology and the church through the centuries.
