You work with an overweight 55-year-old dentist with no known history of heart disease. He begins to complain of sudden, severe, "crushing" pain under his breastbone, in the center of his chest. The pain has lasted more than 5 minutes. What problem should you think of right away, and what should you do?

You witnessed the collapse of a 45-year-old man. You are now performing CPR after sending someone to phone 911. You have done your best to ensure that the first 2 links in the Chain of Survival have been completed immediately. What is the third link in the chain, which will have the greatest effect on increasing this man's chance of survival?

You have been talking with a 60-year-old man. He is alert and has been conversing normally. All at once he complains of a sudden weakness on one side of his face and in one arm. He is also having trouble speaking. What is the most likely cause of his problem?

You remove a 3-year-old from the bottom of the shallow end of a swimming pool. You find that she is limp and unresponsive. No other person is available to help. When should you phone 911?

45: You are a medical advisor helping set up a public access defibrillation (PAD) program at a local shopping mall. The mall has purchased an AED. The mall personnel director asks, "If AEDs are so foolproof, why do the security guards have to learn CPR and be trained to use the AED?" Which of the following is the best explanation for the need to train rescuers to perform CPR and use an AED?

Before providing rescue breathing for an unresponsive victim, you must check for breathing. You do this by listening and feeling for airflow through the victim's nose or mouth and by

You are in the hospital cafeteria, where a woman appears to be in distress. She is grasping her throat with both hands. What should you do to find out if she is choking?

You are providing rescue breathing for a child using a bag-mask device. What action will confirm that each of your rescue breaths is adequate?

A child is gasping for breath but has a pulse rate of 100 per minute. The rescuers should

A child is not breathing but has a pulse rate of 50 per minute. The rescuers should: A. Start CPR beginning with compressions. B. Give 1 breath every 6 seconds.

A 70-year-old man who has been eating steak in a restaurant abruptly stands up and grabs his neck. The rescuer determines that the victim is choking. The best response is to

An infant who had been choking becomes unresponsive. The rescuer should

In which of the following situations is moving a patient during CPR appropriate?
