Provides readers with a broader view of accounting theory than can be provided by using only techniques and procedures. Primarily a descriptive interpretation of the Opinions and Standards issued by the Accounting Principles Board and the Financial Accounting Standards Board. It is descriptive of existing accounting theory--exploring it in depth--while critically examining alternatives to current practice. Through the use of research articles at the end of each chapter and supplemental readings, which provide additional discussion of complex material or a dissenting opinion from current generally accepted accounting principles, it also helps readers evaluate the conclusions reached by the APB and FASB.

A groundbreaking work that paves the way for a new, pro-active financial system With The Monetary System, innovative author pairing Jean-Francois Serval and Jean-Pascal Tranie devise a comprehensive economic modeling system that accounts for the unprecedented situation facing international and regional economies by developing a controversial new stance on the operation of money in society. Presenting a classification of financial instruments with a view toward their underlying legal structures, the book sheds new light on the present economic and financial problems of slow growth and rising debts, and proposes possible outcomes for the global economy. The authors have already gained international attention with their novel approach to currency, and now they turn their attention to the social function of money in all its myriad forms. The book provides a way forward in an era of increased life expectancy and other new social patterns and the social role of money provides a framework for understanding intergenerational redistribution—an urgently pressing task in our time. New aggregate financial categories and economic modeling reveal a possible foundation for increased financial stability Companion website includes key mathematical models, accounting standards, and PowerPoint slides Comprehensive theoretical underpinning presents the contemporary model of money as a social contract Insights into the current economic situation make sense of sovereign debt risk in markets around the world With questions and answers at the end of each chapter, The Monetary System will help you form a new conception of the role of money in society. Improved regulation and tax policies are needed to stabilize the global economy, and this book provides the framework for getting there.

Accounting Theory

Accounting: Building Business Skills 2nd edition is the new edition of the widely used and respected Australasian adaptation of the market leading texts Financial Accounting and Managerial Accounting by Kimmel, Weygandt and Kieso. The new edition continues with the features and style that had been well received by academics and students alike with the first edition. The text maintains the balance between a "user" and "preparer" perspective effectively integrating real financial data and business decisions throughout the material and presenting a "macro" view of accounting information through the use of real company information and financial statements. The authors clearly establish for students how a financial statement communicates the financing, operating, and investing activities of a business. The text builds a strong conceptual understanding and develops skills in the application of accounting principles and techniques, providing students with a solid foundation for further studies in accounting. The integral role of financial statements for decision making is also emphasised in this text and is reinforced throughout by the Decision Toolkit in each chapter. Students are provided with an extensive set of tools necessary to make business decisions based on financial information. The second edition continues to engage, excite and educate students. NEW TO THE SECOND EDITION The Colorado Group Ltd, known by most students, is the 'focus' company, and was chosen because it operates in the retail industry and has easy to read financial reports. Consideration of changes in

the international accounting community as a result of the introduction of IFRSs. Updated content on regulatory guidelines and influences Chapter 11 Cash flow statement updated to include a simplified method for preparing cash flow statement Chapter 12 Financial Statement Analysis contains an example of a good financial report which will be useful for students to consult before starting an assignment Thorough adaptation for Australian and New Zealand students Real world companies and financial information updated and used to highlight accounting processes and reinforce learning Australian, New Zealand and International Business Insights will apply accounting tools to business decisions. Two new chapters; new chapter on liabilities and new chapter on equity End of chapter activities offer a new range of activities to develop business skills like analysis, communication, critical thinking, and exploratory techniques. While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

The Canadian edition of *Accounting for Managers: Interpreting Accounting Information for Decision-Making* builds on the success of the original textbook that was published in the United Kingdom. This book was motivated by a need for a "decision-focused" accounting textbook for both MBA and undergraduate programs. The title of the book emphasizes the focus on accounting to meet the needs of managers. The material contained in the book stresses the interpretation (rather than the construction) of accounting information as well as a critical (rather than unthinking) acceptance of the underlying assumptions behind accounting. It is suitable for postgraduate and undergraduate students who are undertaking courses in accounting that do not lead to professional accreditation, and to practicing non-financial managers who need a better understanding of the role of accounting in their organizations. This Canadian edition book has been adapted to include materials, examples and case studies with a Canadian focus. Part I provides a discussion of financial accounting, with particular focus on international financial reporting standards and practices. Part II concentrates on management accounting information for planning, decision-making and control, while Part III provides the supporting information including relevant readings that demonstrate some current research and literature in management accounting.
