[#CCEA GCSE Biology revision](#) [#GCSE Biology study notes CCEA](#) [#Ccea Biology exam preparation](#) [#Biology GCSE resources Northern Ireland](#) [#revision guide CCEA GCSE Biology](#)

Prepare effectively for your CCEA GCSE Biology exams with comprehensive revision notes. This essential study guide offers clear, concise explanations and structured content, designed specifically to help students in Northern Ireland master the Biology GCSE curriculum. Perfect for consolidating knowledge and boosting your grades, it's your go-to resource for successful exam preparation.

We continue to upload new lecture notes to keep our collection fresh and valuable.

The authenticity of our documents is always ensured.

Each file is checked to be truly original.

This way, users can feel confident in using it.

Please make the most of this document for your needs.

We will continue to share more useful resources.

Thank you for choosing our service.

This document is widely searched in online digital libraries.

You are privileged to discover it on our website.

We deliver the complete version Ccea Gcse Biology Revision Notes to you for free.

GCSE Biology Revision "Family Trees" - GCSE Biology Revision "Family Trees" by Freesciencelessons 250,233 views 5 years ago 4 minutes, 47 seconds - In this video, we look at family trees. I show you how to interpret a family tree and we look at some of the most common exam ...

They do not have cystic fibrosis but they are a carrier.

We also looked at polydactyly which is caused by a dominant allele.

A person only has to inherit the faulty allele from one parent in order to develop polydactyly.

You only need one copy of a dominant allele to show the characteristic.

Let us look at some typical exam questions.

Work out the genotype of person 2

Give one piece of evidence that cystic fibrosis is caused by a recessive allele.

If we look at person 11, we can see that they have cystic fibrosis.

If persons 7 and 8 had another child, what is the chance that it would have cystic fibrosis?

As we know, persons 7 and 8 are both carriers, in other words they are heterozygous.

When two cystic fibrosis carriers reproduce, the probability of one of their offspring having cystic fibrosis is 25% ...

This shows a family tree for polydactyly.

Remember that polydactyly is dominant.

What is the genotype of person 3?

If persons 6 and 7 have another child, what is the probability that they have polydactyly?

This shows the Punnett square that we saw in the video on polydactyly.

In this cross, the probability of any offspring having polydactyly is 50% or 1 in 2.

GCSE Biology Revision "The Nervous System" - GCSE Biology Revision "The Nervous System" by Freesciencelessons 786,121 views 5 years ago 3 minutes, 40 seconds - In this video, we look at the structure of the nervous system and then explore how the reflex arc protects us from danger.

In the last video, we saw that the human body keeps internal conditions as constant as possible.

Scientists call this homeostasis.

Homeostasis involves automatic control systems.

A key part of homeostasis involves the nervous system.

The nervous system consists of two parts.

and send electrical impulses down neurones to the central nervous system.

The word neurones is another way of saying nerve cells.

The central nervous system is the coordination centre.

A key role of the nervous system is that it enables humans to react to their surroundings...

One way that this is done is through the reflex arc.

The reflex arc is a very common exam question so you need to make certain that you learn all the stages.

We are going to look at what happens when you touch a hot object.

First the stimulus is detected by a receptor.

In this case the stimulus is heat and the receptor is in the skin.

Electrical impulses now pass from the receptor along a sensory neurone to the central nervous system.

Remember that sensory neurones are connected to receptors ...

At the end of the sensory neurone is a junction called a synapse.

At the synapse, a chemical is released.

This chemical now diffuses across to a relay neurone in the central nervous system ... where it triggers an electrical impulse.

The electrical impulse now passes across the relay neurone ...

This chemical triggers an electrical impulse in a motor neurone.

The electrical impulse now passes down the motor neurone to an effector.

The muscle now contracts and pulls the hand away from the heat.

Remember that pulling the hand away is called the response.

There is one important point that I need to make about reflexes.

However, in the case of reflexes there is no decision making by the conscious part of the brain.

This makes reflexes automatic and rapid.

So because they are rapid, reflexes help to protect us from danger.

GCSE Pupils Open Their Exam Results Live On Air | Good Morning Britain - GCSE Pupils Open Their Exam Results Live On Air | Good Morning Britain by Good Morning Britain 344,238 views 1 year ago 6 minutes, 50 seconds - GCSE, pupils receive their results today, after A-level students picked theirs up last Thursday.
