The Journal of Anatomy and Physiology, Normal and Pathological, Human and Comparative, 1905, Vol. 39 (Classic Reprint)

Excerpt from The Journal of Anatomy and Physiology, Normal and Pathological, Human and Comparative, 1905, Vol. 39 The constant and uniform structural character of this variation in all of the observed instances would alone suggest that it represents a myological type, abnormal as an element of the primate pectoral group, but forming a normal constituent of the pectoralis complex in certain of the specialised types assumed in other mammalian orders. In the case of certain of the other variants here considered no such homologous muscles are found among the lower mammalian orders. In the 1890s four young scientists at Sydney University - two Scots, a Londoner and an Australian - began sustained research into Australian native fauna for which each was awarded the FRS. They all went on to pursue notable careers in the biological sciences, concluding in London 46-8 and Cambridge. This book follows their careers and enduring friendship exploring in detail the life of its senior member, J.T. Wilson (1861-1945), who was professor of anatomy at Sydney University (1890-1920) and Cambridge (1920-1933) and had abiding interests in science, philosophy, education and military affairs. The narrative is mainly concerned with issues of historical interest to scientists and medical educationists though some, like Empire relations and the contribution of Scots to Australia's development, will interest a wider readership. Many of the preoccupations of Wilson and his colleagues remain topical: the debate between biological science and religion; the struggle to interpret Darwin's theory without placing "Homo sapiens" at the top of an evolutionary tree; pure versus applied science; vocationalism versus scholarship in university education.

The new edition has been significantly revised to include an expanded problem section at the end of each chapter with more quantitative examples and some clinical problems where appropriate. The clinical physiology chapter is now broken into several short chapters.

This is a reproduction of the original artefact. Generally these books are created from careful scans of the original. This allows us to preserve the book accurately and present it in the way the author intended. Since the original versions are generally quite old, there may occasionally be certain imperfections within these reproductions. We're happy to make these classics available again for future generations to enjoy!

Interest in oceanography and marine biology and the relevance of those fields to global environmental issues creates a demand for authoritative reviews that summarize recent research. This volume addresses the nature of the most common form of arthritis in humans. If osteoarthritis is inevitable (only premature death prevents all of us from being afflicted), it seems essential to facilitate its recognition, prevention, options, and indications for treatment. Progress in understanding this disease has occurred with recognition that it is not simply a degenerative joint disease. Causative factors, such as joint malalignment, ligamentous abnormalities, overuse, and biomechanical and metabolic factors have been recognized as amenable to intervention; genetic factors, less so; with metabolic diseases, intermediate. Its diagnosis is based on recognition of overgrowth of bone at joint margins. This contrasts with overgrowth of bone at vertebral margins, which is not a symptomatic phenomenon and has been renamed spondylosis deformans. Osteoarthritis describes an abnormality of joints, but the severity does not necessarily produce pain. The patient and his/her symptoms need to be treated, not the x-ray.

With the growing concern over healthcare in America, studies show that elderly African-Americans often come out on the losing end of the system due to lack of health insurance. Because of this growing population, taking care of elderly patients in the African-American community has become the responsibility of their family. If you're facing such a situation, your questions may be many and your answers few. *Taking Care of Our Folks* is a definitive guide to caring for your elderly relatives. Drawing on comprehensive and detailed research, this essential resource aims to ensure that elderly African-Americans receive culturally competent healthcare and live more productive, independent, and pain-free lives. Deborah Y. Liggan, MD, discusses the major health issues and offers case studies of how each illness affects this ethnic group. She offers up-to-date information on nutrition, pharmacology, technological advances, and self-help for each disease. Topics focus specifically on elderly African-Americans and include: Neurology of aging Cardiovascular problems Mental health and aging Approach to gastrointestinal problems Prominent cancers With clear and concise language, *Taking Care of Our Folks* will serve as an invaluable tool for caregivers and aging patients alike. Take the first step to competent and compassionate caregiving today!

The neurosciences have experienced tremendous and wonderful progress in many areas, and the spectrum encompassing the neurosciences is expansive. Suffice it to mention a few classical fields: electrophysiology, genetics, physics, computer sciences, and more recently, social and marketing neurosciences. Of course, this large growth resulted in the production of many books. Perhaps the visual system and the visual cortex were in the vanguard because most animals do not produce their own light and offer thus the invaluable advantage of allowing investigators to conduct experiments in full control of the stimulus. In addition, the fascinating evolution of scientific techniques, the immense productivity of recent research, and the ensuing literature make it virtually impossible to publish in a single volume all worthwhile work accomplished throughout the scientific world. The days when a single individual, as Diderot, could undertake the production of an encyclopedia are gone forever. Indeed most approaches to studying the nervous system are valid and neuroscientists produce an almost astronomical number of interesting data accompanied by extremely worthy hypotheses which in turn generate new ventures in search of brain functions. Yet, it is fully justified to make an encore and to publish a book dedicated to visual cortex and beyond. Many reasons validate a book assembling chapters written by active researchers. Each has the opportunity to bind together data and explore original ideas whose fate will not fall into the hands of uncompromising reviewers of traditional journals. This book focuses on the cerebral cortex with a large emphasis on vision. Yet it offers the reader diverse approaches employed to investigate the brain, for instance, computer simulation, cellular responses, or rivalry between various targets and goal directed actions. This volume thus covers a large spectrum of research even though it is impossible to include all topics in the extremely diverse field of neurosciences.

William Lyons presents a survey of psychological and physiological theories on emotions. Once the background is established, Lyons analyses his own theory, which throws light on the motivating role of emotions in our lives, our attitudes towards our emotions and our responsibility for them.

Conservation Physiology for the Anthropocene – A Systems Approach, Volume 39B in the Fish Physiology series, is a comprehensive synthesis related to the physiology of fish in the Anthropocene. This volume helps solve knowledge gaps by considering the many ways in which different physiological systems (e.g., sensory physiology, endocrine, cardio-respiratory, bioenergetics, water and ionic balance and homeostasis, locomotion/biomechanics, gene function) and physiological diversity are relevant to the management and conservation of fish and fisheries. Chapters in this release include Using physiology for recovering imperiled species – the Delta smelt, Conservation hatcheries – the Sturgeon story, Aquatic pollutants and stressors, and more. Other sections discuss Fisheries interactions in a multi-stressor world, Environmental change in riverine systems - Amazon basin stressors, Environmental change in lakes and wetlands – East African basin stressors, Coral reef fish in a multi-stressor world, Polar fish in a multi-stressor world, Physiology informs fisheries restoration and habitat management, A physiological perspective on fish passage and entrainment, Invasive species control and management – the sea lamprey story, and On the conservation physiology of fishes for tomorrow. Includes authoritative contributions from an international board of authors, each with extensive expertise in the conservation physiology of fish Provides the most up-to-date information on the ways in which different physiological systems are relevant to the management and conservation of fish and fisheries Presents the latest release in the Fish Physiology series Identifies how anthropogenic stressors perturb physiological systems Explores how different physiological systems can be exploited to solve conservation problems

An Advanced Research Workshop (ARW) "Data Fusion Technologies for Harbour Protection" was held in Tallinn, Estonia 27 June–1 July, 2005. This workshop was organized by request of the NATO Security Through Science Programme and the Defence Investment Division. An ARW is one of many types of funded group support mechanisms established by the NATO Science Committee to contribute to the critical assessment of existing knowledge on new important topics, to identify directions for future research, and to promote close working relationships between scientists from different countries and with different professional experiences. The NATO Science Committee was approved at a meeting of the Heads of Government of the Alliance in December 1957, subsequent to the 1956 recommendation of "Three Wise Men" – Foreign Ministers Lange (Norway), Martino (Italy) and Pearson (Canada) on Non-Military Cooperation in NATO. The NATO Science Committee established the NATO Science Programme in 1958 to encourage and support scientific collaboration between individual scientists and to foster scientific development in its member states. In 1999, following the end of the Cold War, the Science Programme was transformed so that support is now devoted to collaboration between Partner-country and NATO-country scientists or to contributing towards research support in Partner countries. Since 2004, the Science Programme was further modified to focus exclusively on NATO Priority Research Topics (i. e. Defence Against Terrorism or Countering Other Threats to Security) and also preferably on a Partner country priority area.

The world has changed in the last twenty years, and evidence has changed with it. Gone are the days when exhibits consisted of paper documents, photographs, and tangible items. Instead, we live in the era of instant messages, social site accounts that come and go, and online anonymity in need of piercing. Forgery, fraud, and falsehoods have always been with us, but the tools for committing these acts are now easily obtained and widely used. All this presents a host of new challenges to any attorney attempting to use or combat evidence from these sources. Our courts rely on evidence that is reliable and honest, and our job as lawyers is to find and confirm that reliable, honest evidence. Winning with Social Media is designed to help you do just that. It provides the tools you need to find and capture the online evidence that a party opponent may try to obscure, modify, or even erase from

the Internet. With this guidebook at your side, you can do the research and evidence preservation necessary to make your case. In April 1997, United States Secretary of Defense William Cohen declared that there are terrorists at work who "... are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves..." Weather modification in the form of cloud seeding to increase snow packs in the Sierras or suppress hail over Kansas is now an everyday affair. Hundreds of environmental and weather modifying technologies have been patented in the United States alone-and hundreds more are being developed in civilian, academic, military and quasi-military laboratories around the world at this moment! This book lays bare the grim facts of who is doing it and why. The earth and the sky have themselves been turned into weapons! Underground nuclear tests in Nevada have set off earthquakes. A Russian company has been offering to sell typhoons on demand since the 1990s. Scientists have been searching for ways to move hurricanes for over 50 years-the same timeframe that took us from the Wright Brothers to Neil Armstrong. In this book, Jerry E. Smith picks up where his 1998 book about the High-frequency Active Auroral Research Program (HAARP) left off. He reports on recent developments at HAARP, including its possible connection to the crash of the Space Shuttle Columbia and what role, if any, it played in certain "natural" disasters, like Hurricane Katrina. Tackling the chemtrail controversy, Smith examines claims that particles called aerosols are being deliberately injected into the atmosphere. Edward Teller, father of the hydrogen bomb, proposed putting up a "sun screen" of aerosols to save the earth from global warming-is someone actually doing it? Numerous ongoing military programs do inject aerosols at high altitude for communications and surveillance operations. Could these include mind control or population control applications? Smith puts these technologies into context by examining the geopolitical conflicts that are driving their development from Globalization to the rise of Neo-Con Neo-Fascism.

Winning with Social Media 2.0

Reveals the formidable organization of intelligence outsourcing that has developed between the U.S. government and private companies since 9/11, in a report that reveals how approximately seventy percent of the nation's funding for top-secret tasks is now being funneled to higher-cost third-party contractors. 35,000 first printing.

Litigation is about winning. It's not like a game of horseshoes, where coming close is good enough. Placing second is not something that gets and keeps clients. Now flash forward to the social media era of Facebook, Twitter, Instagram, Snapchat—and the list could go on and on, with new sites springing up and gaining traction all the time. Social media—once the stomping grounds of a youthful, tech-savvy generation—is a phenomenon with an incredible impact in the legal arena. The oversharing that happens on social networking sites can make or break a case—and what's more, the online landscape is ever changing, ever morphing and evolving, nearly at the lightning speed of technology itself. It may sound like a brave new world out there (and it is), but the good news is that you can quickly get up to speed and have a desktop guide at your fingertips. And, once you become comfortable with social media, you're going to be pleasantly surprised by how much helpful evidence can be found on

social networking sites. That's where Winning with Social Media comes in. In this new book by attorney Michelle Sherman, you'll discover how this modern form of evidence plays a key role in cases ranging from divorce and child custody to wrongful termination, from narcotics trafficking to invasion of privacy, from breach of contract to intellectual property, from DUI to professional malpractice. You'll learn how to:

- conduct informal discovery for getting social media discovery from the opposition
- execute personal service through social media when all else fails
- lay a rock-solid foundation to get online posts admitted into evidence
- overcome objections in discovery and at trial
- authenticate "ownership" of social media accounts and the incriminating posts made to them
- keep your clients from sinking their case through "loose lips" on social media
- use and monitor social media posts— not just from the parties, but witnesses, jurors, and even the judge—from start to finish in your case

What you won't come away with, Sherman advises, is any reassurance that you can ignore social media in your litigation matters. Lawyers who do or who dismiss its relevance do so at their clients' peril. In the twenty-first century, dealing with social media evidence is a crucial part of your discovery plan and trial preparation, and Winning with Social Media will help you meet that challenge.

Electronic Discovery: Law and Practice, 3rd Edition

TRIZ is a brilliant toolkit for nurturing engineering creativity and innovation. This accessible, colourful and practical guide has been developed from problem-solving workshops run by Oxford Creativity, one of the world's top TRIZ training organizations started by Gadd in 1998. Gadd has successfully introduced TRIZ to many major organisations such as Airbus, Sellafield Sites, Saint-Gobain, DCA, Doosan Babcock, Kraft, Qinetiq, Trelleborg, Rolls Royce and BAE Systems, working on diverse major projects including next generation submarines, chocolate packaging, nuclear clean-up, sustainability and cost reduction. Engineering companies are increasingly recognising and acting upon the need to encourage successful, practical and systematic innovation at every stage of the engineering process including product development and design. TRIZ enables greater clarity of thought and taps into the creativity innate in all of us, transforming random, ineffective brainstorming into targeted, audited, creative sessions focussed on the problem at hand and unlocking the engineers' knowledge and genius to identify all the relevant solutions. For good design engineers and technical directors across all industries, as well as students of engineering, entrepreneurship and innovation, TRIZ for Engineers will help unlock and realise the potential of TRIZ. The individual tools are straightforward, the problem-solving process is systematic and repeatable, and the results will speak for themselves. This highly innovative book: Satisfies the need for concise, clearly presented information together with practical advice on TRIZ and problem solving algorithms Employs explanatory techniques, processes and examples that have been used to train thousands of engineers to use TRIZ successfully Contains real, relevant and recent case studies from major blue chip companies Is illustrated throughout with specially commissioned full-colour cartoons that illustrate the various concepts and techniques and bring the theory to life Turns good engineers into great engineers.
