MOUNTAINEERING IN THE SIERRA NEVADA

A bona fide classic, originally published in 1872, *Mountaineering in the Sierra Nevada* is still exciting reading. It describes the perils and pleasures experienced by Clarence King (1842–1901) while conducting the first geological survey of California in the 1860s. His language was equal to the marvels he found, and here with unfading brilliance are his accounts of scaling such mountains as Tyndall, Shasta, and Whitney. The chapters on the Yosemite Valley and surrounding High Sierras were written while he was surveying the boundaries of a newly designated national park. There are also delightful vignettes of western characters, including a Sierra artist and a family of Pike County hog farmers. &

Mountaineering in the Sierra Nevada

Excerpt from *Mountaineering in the Sierra Nevada* Mountaineers will realize, from these descriptions of Sierra climbs, how few dangers we encountered which might not have been avoided by time and caution. Since the uncertain perils of glacier work and snow copings do not exist in California, except on the northeast flank of Mount Shasta, our climbs proved safe and easy in comparison with the more serious Alpine ascents. And now that the topography of the higher Sierra has been all explored by the Geological Survey, nearly every peak is found to have an accessible side. Our difficulties and our joys were those of the pioneer. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Mountaineering in the Sierra Nevada

Clarence King (born 1842) of Rhode Island, rode horseback across the continent in 1863. In California, he was hired to work on Whitney's geological survey of the state, beginning the adventures recorded in this book.

MOUNTAINEERING IN THE SIERRA N

First edition of King's classic book on American mountaineering. King began exploring the Sierra with William Brewer in 1863, and in 1871, began to write up accounts of their numerous ascents. The United States Geological Survey was established in 1879 due to King's influence.

Mountaineering in the Sierra Nevada

An interdisciplinary cultural history of exploration and mountaineering in the nineteenth century European forays to mountain summits began in the late eighteenth and early nineteenth centuries with the search for plants and minerals and the study of geology and glaciers. Yet scientists were soon captivated by the enterprise of climbing itself, enthralled with the views and the prospect of “conquering” alpine summits. Inspired by Romantic notions of nature, early mountaineers idealized their endeavors as sublime experiences, all the while deliberately measuring what they saw. As increased leisure time and advances in infrastructure and equipment opened up once formidable mountain regions to those seeking adventure and sport, new models of masculinity emerged that were fraught with tensions. This book examines how written and artistic depictions of nineteenth-century exploration and mountaineering in the Andes, the Alps, and the Sierra Nevada shaped cultural understandings of nature and wilderness in the Anthropocene.

Mountaineering in the Sierra Nevada

Mountaineers Books is proud to reissue three stunning photography books by award-winning cameraman and mountaineer James Martin that feature some of the most beloved peaks in the West.

North Cascade Crest: Notes & Images From America's Alps Mount Rainier: Notes & Images From Our Iconic Mountain Sierra: Notes & Images From The Range Of Light These books offer a visual journey through the craggy crest of the North Cascades, the glaciers and wilderness of Mount Rainier, and the luminescent peaks of the Sierra Nevada. Each book gives context to the images by detailing the geological history of the mountains, describing the flora and fauna and relating stories from the human climbing history of these peaks. "James Martin's words and images do the near impossible: bring the thrills of mountaineering alive in print." -- Art Wolfe The Sierra Nevada is one of the West's most beautiful and famous mountain ranges. Here Martin shares an intimate view of its rugged landscape, describing his own early history of hiking in the range, attending Ansel Adams-led seminars in Yosemite, and once hiking from there to Mount Whitney and on to Sequoia.

The Conquest of Mount Cook and Other Climbs; An Account of Four Seasons' Mountaineering on the Southern Alps of New Zealand - Scholar's Choice Edition

The diverse terrain and unspoiled wilderness of the High Sierra makes it one of the best places in the world for "the practice of mountains" - advanced hiking, cross-country rambling, peak bagging, rock and ice climbing, and ski touring. The most comprehensive resource on this explorer's paradise, The High Sierra details all the major and minor routes to the area and covers approach roads, trails, and cross-country and climbing routes. Sections called "Wrinkles" provide alternative and lesser-known linkage routes between and within regions.

The High Sierra

This volume contains eleven mountain adventures, from the high Sierras in California to first ascents in Alaska. In each John Muir, who founded the Sierra Club in 1892, maintains a careful and subtle balance between the physical and symbolic aspects of ascending or observing the sublimity of his surroundings. Mountains are for him a source of discovery, not merely of new geography, but also of the inner human, and they represent a supreme test and an affirmation of the human spirit.

Climbing on the Himalaya and Other Mountain Ranges - Scholar's Choice Edition

This new and thoroughly revised edition is the authoritative guide to the best rock climbing in the Sierra Nevada. In addition to detailed route descriptions, topos, and route ratings, the book offers a history of climbing in the region. A must-have for California climbers and for any climber traveling to the Sierra.

Mount McKinley and Mountain Climbers' Proofs - Scholar's Choice Edition

Excerpt from *A Search for the Apex of America, High Mountain Climbing in Peru and Bolivia Including the Conquest of Huascarán: With Some Observations on the Country and People Below* For the cold nights we had sleeping bags consisting of two pairs of blankets in a canvas cover, with a flap to be drawn over the face. It occurred to me to carry Japanese stoves; small, cloth-covered tin boxes which a roll of prepared fuel will heat for two hours. With one of these in each pocket and good mittens, there would be no danger of cold hands. I had also a pair of heavy woollen mitts with long wrists, especially suited for scientific observations on the summit when the fingers must be free. For our further protection we had two tents, one of silk that it might be as light as possible, since at great altitudes neither man nor beast can carry half so much as below. Climbing California's Mountains

Long established as a standard reference work worldwide, this is a thorough bibliography of all mountaineering books that are of practical use to climbers or for reading pleasure or historical interest. Documenting more than 2000 books of mountaineering literature, it also includes nearly 900 climber's guidebooks, a sampling of more than 400 works of mountaineering fiction, plus journals and bibliographies.

The High Sierra

People travel from all over the world to stand on the summit of Mt. Whitney, the highest point in the contiguous United States. Miles of rugged granitic terrain, blue-green lakes, snowfields and impressive knife-edge ridges are just some of the awesome vistas awaiting those who make it to the top. Author Peter Croft (*The Good, The Great and The Awesome*), winner of the American Alpine Club's Underhill Award is considered one of the best alpine climbers in the world today. The Eastern Sierra resident has done numerous first free ascents and created the mountaineering sport of "traverses and link-ups" where in one day he'll ascend and traverse several summits. Croft's climbing resume includes: First free ascent of University Wall V 5.12, Squamish (1982); First free solo of the Rostrum V 5.11, Yosemite

(1985); First traverse of the Waddington range (1985); First one-day link-up of the Nose of El Capitan and Half Dome, Yosemite (1986); First free solo of Astroman V 5.11 (1987); First free solo link-up of Astroman and the Rostrum (1987); First free ascent of the Shadow V 5.13, onsight of crux pitch (1988); First free ascent of Moonlight Buttress V 5.12d/13a (1991); First one-day link-up of the Nose and Salathe routes on El Capitan, Yosemite (1992); First solo and one-day Minaret Traverse, the Sierras (1992); First ascent of Sponsar Brakk via 8,000-ft. rock route VI 5.11, Pakistan (1998); First ascent of the Evolution Traverse, the Sierras (2000); First ascent of Airstream, High Sierra

Norman Clyde of the Sierra Nevada

I now realize that so many of the places in the Sierra Nevada I have loved to visit are mountain alpine basins. Mountain passes and peaks are singular and impressive but they are places we pass on our way to a campsite in a mountain basin. For example the climb to a pass may be difficult and arduous. We may like the view but we press on because we hope to end with a well deserved longer rest at the pass followed by a descent to a basin campsite. We may have to put our windbreaker back on there. We may have to sit down every few switchbacks to rest ourselves by sitting on a boulder in the shade. I often think of the difficult climb up to Glen Pass on the northbound John Muir Trail. Once on top there is only time for a short celebration and rest because our campsite will be in the Rae Lakes Basin below. A mountain basin reminds me of a great cathedral where we are surrounded by lofty steeples. Alpine basins are at 10,000' plus feet yet you still look up and are walled in by massive granite walls. I was at guitar lake at 12,500' and looked around at peaks 1,500' higher yet. These basins (also called watersheds) all have their own ecosystem but share common elements. Uplift or glacial scouring generally forms them. Basins are similar to valleys but valley tends to be "V" or "U" shaped while basins are round or oval shaped. There is generally a stream and a beautiful rather stark expansive view with scattered vegetation. These basins also contain several tarns or lakes, which may be fed by the same creek. Eventually these creeks flow into a river. For example Piute Creek flows into the San Joaquin River. The lakes can be deep blue or even green if fed by glaciers. Some basins are very popular like Rae Lakes and Kearsarge where there is length of stay limits.
