On the Frontier of Adulthood reveals a startling new fact: adulthood no longer begins when adolescence ends. A lengthy period before adulthood, often spanning the twenties and even extending into the thirties, is now devoted to further education, job exploration, experimentation in romantic relationships, and personal development. Pathways into and through adulthood have become much less linear and predictable, and these changes carry tremendous social and cultural significance, especially as institutions and policies aimed at supporting young adults have not kept pace with these changes. This volume considers the nature and consequences of changes in early adulthood by drawing upon a wide variety of historical and contemporary data from the United States, Canada, and Western Europe. Especially dramatic shifts have occurred in the conventional markers of adulthood—leaving home, finishing school, getting a job, getting married, and having children—and in how these experiences are configured as a set. These accounts reveal how the process of becoming an adult has changed over the past century, the challenges faced by young people today, and what societies can do to smooth the transition to adulthood. "This book is the most thorough, wide-reaching, and insightful analysis of the new life stage of early adulthood."—Andrew Cherlin, Johns Hopkins University "From West to East, young people today enter adulthood in widely diverse ways that affect their life chances. This book provides a rich portrait of this journey—an essential font of knowledge for all who care about the younger generation."—Glen H. Elder Jr., University of North Carolina at Chapel Hill "On the Frontier of Adulthood adds considerably to our knowledge about the transition from adolescence to adulthood. . . . It will indeed be the definitive resource for researchers for years to come. Anyone working in the area—whether in demography, sociology, economics, or developmental psychology—will wish to make use of what is gathered here."—John Modell, Brown University "This is a must-read for scholars and policymakers who are concerned with the future of today's youth and will become a touchpoint for an emerging field of inquiry focused on adult transitions."—Jeanne Brooks-Gunn, Columbia University

On Your Own without a Net

In the decade after high school, young people continue to rely on their families in many ways—sometimes for financial support, sometimes for help with childcare, and sometimes for continued shelter. But what about those young people who confront special difficulties during this period, many of whom can count on little help from their families? *On Your Own Without a Net* documents the special challenges facing seven vulnerable populations during the transition to adulthood: former foster care youth, youth formerly involved in the juvenile justice system, youth in the criminal justice system, runaway and homeless youth, former special education students, young people in the mental health system, and youth with physical disabilities. During adolescence, government programs have been a major part of their lives, yet eligibility for most programs typically ends between the ages of eighteen and twenty-one. This critical volume shows the unfortunate repercussions of this termination of support and points out the issues that must be addressed to improve these young people's chances of becoming successful adults.

Buying the Field

In the past fifty years, scholars of human development have been moving from studying change in humans within sharply defined periods, to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. *The Handbook of Life-Span Development, Volume 2: Social and Emotional Development* presents the study of human development conducted by the best scholars in the 21st century. Social workers, counselors and public health workers will receive coverage of the social and emotional aspects of human change across the lifespan.

The Handbook of Life-Span Development, Volume 2

More and more young men and women today are taking longer and having more difficulty making a successful transition to adulthood. They are staying in school longer, having a harder time finding steady employment at jobs that provide health insurance, and are not marrying and having children until much later in life than their parents did. In *The Price of Independence*, a roster of distinguished experts diagnose the extent and causes of these trends. Observers of social trends have speculated on the economic changes that may be delaying the transition to adulthood—from worsening job opportunities to mounting student debt and higher housing costs—but few have offered empirical evidence to back up their claims. *The Price of Independence* represents the first significant analysis of these economic explanations, charting the evolving life circumstances of eighteen to thirty-five year-olds over the last few decades. Lisa Bell, Gary Burtless, Janet Gornick, and Timothy M. Smeeding show that the earnings of young workers in the United States and a number of industrialized countries have declined

relative to the cost of supporting a family, which may explain their protracted dependence. In addition, Henry Farber finds that job stability for young male workers has dropped over the last generation. But while economic factors have some influence on young people's transitions to adulthood, *The Price of Independence* shows that changes in the economic climate can not account for the magnitude of the societal shift in the timing of independent living, marriage, and childbearing. Aaron Yelowitz debunks the myth that steep housing prices are forcing the young to live at home—housing costs actually fell between 1980 and 2000 once lower interest rates and tax subsidies are taken into account. And Ngina Chiteji reveals that average student loan debt is only \$3,500 per household. The trend toward starting careers and families later appears to have more to do with changing social norms, as well as policies that have broadened access to higher education, than with changes in the economy. For better or worse, the current generation is redefining the nature and boundaries of what it means to be a young adult. *The Price of Independence* documents just how dramatically the modern lifecycle has changed and offers evidence as an antidote to much of the conventional wisdom about these social changes.

This volume explores the changing nature of community in modern corporations. Community within and between firms - the fabric of trust so essential to contemporary business - has long been based on loyalty. This loyalty has been largely destroyed by three decades of economic turbulence, downsizing, and restructuring. Yet community is more important than ever in an increasingly complex, knowledge-intensive economy. The thesis of this volume is that a new form of community is slowly emerging - one that is more flexible and wider in scope than the community of loyalty, and that transcends the limitations of both traditional *Gemeinschaft* and modern *Gesellschaft*. We call this form collaborative community. The trend towards collaborative community is difficult to detect amidst the ferocious forces of market and bureaucratic rationalization. But close analysis of some of America's most successful corporations reveals three dimensions of the emerging form: · a shared ethic of interdependent contribution: distinct from the uneasy mix of loyalty and individualism that prevailed for so long; · a formalized set of norms of interdependent process management that include iterative co-design, metaphoric search, and systematic mutual understanding: distinct from both rigid authority hierarchies and informal log-rolling; · An interdependent social identity that supports these organizational features: distinct from both dependent, traditionalistic identities and the independence of the autonomous self that is often associated with Western culture. This volume is a collaborative effort of leading scholars in organization studies to delineate the new form of community and the forces encouraging and constraining its growth. The contributors combine sociology and psychology theory with detailed analysis of business cases at the firm and inter-firm level.

The difficulties in determining the quality of information on the Internet--in particular, the implications of wide access and questionable credibility for youth and learning. Today we have access to an almost inconceivably vast amount of information, from sources that are increasingly portable, accessible, and interactive. The Internet and the explosion of digital media content have made more information available from more sources to more people than at any other time in human history. This brings an infinite number of opportunities for learning, social connection, and entertainment. But at the same time, the origin of information, its quality, and its veracity are often difficult to assess. This volume addresses the issue of credibility--the objective and subjective components that make information believable--in the contemporary media environment. The contributors look particularly at youth audiences and experiences, considering the implications of wide access and the questionable credibility of information for youth and learning. They discuss such topics as the credibility of health information online, how to teach credibility assessment, and public policy solutions. Much research has been done on credibility and new media, but little of it focuses on users younger than college students. *Digital Media, Youth, and Credibility* fills this gap in the literature. Contributors Matthew S. Eastin, Gunther Eysenbach, Brian Hilligoss, Frances Jacobson Harris, R. David Lankes, Soo Young Rieh, S. Shyam Sundar, Fred W. Weingarten

The Firm as a Collaborative Community

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb.

How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Digital Media, Youth, and Credibility

An examination of the mix of face-to-face and digital methods that young people use in their experiments with civic engagement. Although they may disavow politics as such, civic-minded young people use every means and media at their disposal to carry out the basic tasks of citizenship. Through a mix of face-to-face and digital methods, they deliberate on important issues and debate with peers and powerbrokers, redefining some key dynamics that govern civic life in the process. In *Participatory Politics*, Elisabeth Soep examines the specific tactics used by young people as they experiment with civic engagement. Drawing on her scholarly research and on her work as a media producer and educator, Soep identifies five tactics that are part of effective, equitable participatory politics among young people: Pivot Your Public (mobilizing civic capacity within popular culture engagements); Create Content Worlds (using inventive and interactive storytelling that sparks sharing); Forage for Information in public data archives; Code Up (using computational thinking to design tools, platforms, and spaces for public good); and Hide and Seek (protecting privacy and information sources). After describing these tactics as they manifest themselves in a range of youth-driven activities—from the runaway spread of the video Kony 2012 to community hackathons—Soep discusses concrete ideas for cultivating the new literacies that will enable young people to participate in public life. She goes on to consider some risks associated with these participatory tactics, including simplification and sensationalism, and ways to avoid them, and concludes with implications for future research and practice.

Familie, Sozialisation und die Zukunft der Kinder

Early Adulthood in a Family Context, based on the 18th annual National Symposium on Family Issues, emphasizes the importance of both the family of origin and new and highly variable types of family formation experiences that occur in early adulthood. This volume showcases new theoretical, methodological, and measurement insights in hopes of advancing understanding of the influence of the family of origin on young adults' lives. Both family resources and constraints with respect to economic, social, and human capital are considered.

Aging, Society, and the Life Course, Sixth Edition

Part of the authoritative four-volume reference that spans the entire field of child development and has set the standard against which all other scholarly references are compared. Updated and revised to reflect the new developments in the field, the *Handbook of Child Psychology, Sixth Edition* contains new chapters on such topics as spirituality, social understanding, and non-verbal communication. Volume 1: *Theoretical Models of Human Development*, edited by Richard M. Lerner, Tufts University, explores a variety of theoretical approaches, including life-span/life-course theories, socio-culture theories, structural theories, object-relations theories, and diversity and development theories. New chapters cover phenomenology and ecological systems theory, positive youth development, and religious and spiritual development.

How People Learn

This is an open access title available under the terms of a [CC BY-NC-ND 4.0 International] licence. It is free to read at Oxford Clinical Psychology Online and offered as a free PDF download from OUP and selected open access locations. Attachment theory is among the most popular theories of human socioemotional development, with a global research community and widespread interest from clinicians, child welfare professionals, educationalists and parents. It has been considered "one of the most generative contemporary ideas" about family life in modern society. It is one of the last of the grand theories of human development that still retains an active research tradition. Attachment theory and research speak to fundamental questions about human emotions, relationships and development.

They do so in terms that feel experience-near, with a remarkable combination of intuitive ideas and counter-intuitive assessments and conclusions. Over time, attachment theory seems to have become more, rather than less, appealing and popular, in part perhaps due to alignment with current concern with the lifetime implications of early brain development. Cornerstones of Attachment Research re-examines the work of key laboratories that have contributed to the study of attachment. In doing so, the book traces the development in a single scientific paradigm through parallel but separate lines of inquiry. Chapters address the work of Bowlby, Ainsworth, Main and Hesse, Sroufe and Egeland, and Shaver and Mikulincer. Cornerstones of Attachment Research utilises attention to these five research groups as a lens on wider themes and challenges faced by attachment research over the decades. The chapters draw on a complete analysis of published scholarly and popular works by each research group, as well as much unpublished material.

Participatory Politics

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

Early Adulthood in a Family Context

This major new reference presents The Foresight Mental Capital and Wellbeing Project (a UK Government project in the Government Office for Science). It offers a comprehensive exploration of how mental capital and wellbeing operate over the lifespan; how experiences in the family, in school, at work and following retirement augment or reduce mental capital and wellbeing, and the impact that this has for the individual and for the welfare and economic progress of the nation. Mental Capital and Wellbeing comprises a series of scientific reviews written by leading international scientists and social scientists in the field. The reviews undertake systematic analyses of the evidence base surrounding five key themes, on which they propose future policies will have to be based. An internationally renowned team of Editors introduce each theme and draw together conclusions in terms of both policy and practice. Section 1 (Mental Capital and Wellbeing Through Life) – Mental capital refers to the totality of an individual's cognitive and emotional resources, including their cognitive capability, flexibility and efficiency of learning, emotional intelligence and resilience in the face of stress. The extent of an individual's resources reflects his or her basic endowment (e.g. genes and early biological programming), motivation and experiences (e.g. education) which take place throughout the life course. This section presents the very latest on the science of mental capital throughout life. Section 2 (Learning Through Life) provides a coherent overview of a fast-moving and complex field of policy and practice. Educational attainment has a considerable impact on physical and mental wellbeing, both directly and indirectly, by enabling people better to achieve their goals. The ability to continue learning throughout the lifespan

is critical to a successful and rewarding life in contemporary societies. Section 3 (Mental Health and Ill-Health) draws together the most recent evidence about positive mental health as well as a range of mental disorders to consider their importance to the population and economy in terms of prevalence and disability and the wider burden on society. Section 4 (Wellbeing and Work) – It is estimated that 13 million working days are lost through stress each year, costing the economy over £3.7 billion per annum. This theme explores those drivers that influence the nature and structure of work and the impact this has on employee wellbeing. Section 5 (Learning Difficulties) – This theme provides a cutting-edge picture of how recent insights from genetics, cognitive and neuroscience improve our understanding of learning difficulties such as dyslexia, dyscalculia and attention-deficit-hyperactivity disorder. Reviews focus on how current research can contribute to early diagnosis and improved intervention.

Handbook of Child Psychology, Theoretical Models of Human Development

Genome editing is a powerful new tool for making precise alterations to an organism's genetic material. Recent scientific advances have made genome editing more efficient, precise, and flexible than ever before. These advances have spurred an explosion of interest from around the globe in the possible ways in which genome editing can improve human health. The speed at which these technologies are being developed and applied has led many policymakers and stakeholders to express concern about whether appropriate systems are in place to govern these technologies and how and when the public should be engaged in these decisions. Human Genome Editing considers important questions about the human application of genome editing including: balancing potential benefits with unintended risks, governing the use of genome editing, incorporating societal values into clinical applications and policy decisions, and respecting the inevitable differences across nations and cultures that will shape how and whether to use these new technologies. This report proposes criteria for heritable germline editing, provides conclusions on the crucial need for public education and engagement, and presents 7 general principles for the governance of human genome editing.

Cornerstones of Attachment Research

Young adults are at a significant and pivotal time of life. They may seek higher education, launch their work lives, develop personal relationships and healthy habits, and pursue other endeavors that help set them on healthy and productive pathways. However, the transition to adulthood also can be a time of increased vulnerability and risk. Young adults may be unemployed and homeless, lack access to health care, suffer from mental health issues or other chronic health conditions, or engage in binge drinking, illicit drug use, or driving under the influence. Young adults are moving out of the services and systems that supported them as children and adolescents, but adult services and systems--for example, the adult health care system, the labor market, and the justice system--may not be well suited to supporting their needs. Improving the Health, Safety, and Well-Being of Young Adults is the summary of a workshop hosted by the Board on Children, Youth, and Families of the Institute of Medicine (IOM) and the National Research Council (NRC) in May, 2013. More than 250 researchers, practitioners, policy makers, and young adults presented and discussed research on the development, health, safety, and well-being of young adults. This report focuses on the developmental characteristics and attributes of this age group and its placement in the life course; how well young adults function across relevant sectors, including, for example, health and mental health, education, labor, justice, military, and foster care; and how the various sectors that intersect with young adults influence their health and well-being. Improving the Health, Safety, and Well-Being of Young Adults provides an overview of existing research and identifies research gaps and issues that deserve more intensive study. It also is meant to start a conversation aimed at a larger IOM/NRC effort to guide research, practices, and policies affecting young adults.

The essays that make up this book examine the question of child migration from legal, sociological and anthropological angles, examining the situation in both countries of origin and receiving countries.--Publisher's description.

Investing in the Health and Well-Being of Young Adults

This textbook showcases innovative approaches to the interdisciplinary field of childhood and youth studies, examining how young people in a wide range of contemporary and historical contexts around the globe live their young lives as subjects, objects, and agents. The diverse contributions examine how children and youth are simultaneously constructed: as individual subjects through social processes and

culturally-specific discourses; as objects of policy intervention and other adult power plays; and also as active agents who act on their world and make meaning even amidst conditions of social, political, and economic marginalization. In addition, the book is centrally engaged with questions about how researchers take into consideration children's and young people's own conceptions of themselves and how we conceptualize child and youth potentials for agency at different ages and stages of growing up. Each chapter discusses substantive research but also engages in self-reflection about methodology, positionality, and/or disciplinarity, thus making the volume especially useful for teaching. This book will be of interest to students and scholars across a range of disciplines, including childhood studies, youth studies, girls' studies, development studies, research methods, sociology, anthropology, education, history, geography, public policy, cultural studies, gender and women's studies and global studies.

Mental Capital and Wellbeing

The Economic and Fiscal Consequences of Immigration finds that the long-term impact of immigration on the wages and employment of native-born workers overall is very small, and that any negative impacts are most likely to be found for prior immigrants or native-born high school dropouts. First-generation immigrants are more costly to governments than are the native-born, but the second generation are among the strongest fiscal and economic contributors in the U.S. This report concludes that immigration has an overall positive impact on long-run economic growth in the U.S. More than 40 million people living in the United States were born in other countries, and almost an equal number have at least one foreign-born parent. Together, the first generation (foreign-born) and second generation (children of the foreign-born) comprise almost one in four Americans. It comes as little surprise, then, that many U.S. residents view immigration as a major policy issue facing the nation. Not only does immigration affect the environment in which everyone lives, learns, and works, but it also interacts with nearly every policy area of concern, from jobs and the economy, education, and health care, to federal, state, and local government budgets. The changing patterns of immigration and the evolving consequences for American society, institutions, and the economy continue to fuel public policy debate that plays out at the national, state, and local levels. The Economic and Fiscal Consequences of Immigration assesses the impact of dynamic immigration processes on economic and fiscal outcomes for the United States, a major destination of world population movements. This report will be a fundamental resource for policy makers and law makers at the federal, state, and local levels but extends to the general public, nongovernmental organizations, the business community, educational institutions, and the research community.

Human Genome Editing

Analyzes the changes which have occurred over this century in the timing of transitions to adult life in the United States such as transitions out of school and into work and out of the parental home and into marriage and parenthood. Links demographic behavior with popular beliefs, and with the social and cultural developments and major events in American society from the 1920s to the 1970s.

Improving the Health, Safety, and Well-Being of Young Adults

This book is open access under a CC BY 4.0 license. This handbook synthesizes and analyzes the growing knowledge base on life course health development (LCHD) from the prenatal period through emerging adulthood, with implications for clinical practice and public health. It presents LCHD as an innovative field with a sound theoretical framework for understanding wellness and disease from a lifespan perspective, replacing previous medical, biopsychosocial, and early genomic models of health. Interdisciplinary chapters discuss major health concerns (diabetes, obesity), important less-studied conditions (hearing, kidney health), and large-scale issues (nutrition, adversity) from a lifespan viewpoint. In addition, chapters address methodological approaches and challenges by analyzing existing measures, studies, and surveys. The book concludes with the editors' research agenda that proposes priorities for future LCHD research and its application to health care practice and health policy. Topics featured in the Handbook include: The prenatal period and its effect on child obesity and metabolic outcomes. Pregnancy complications and their effect on women's cardiovascular health. A multi-level approach for obesity prevention in children. Application of the LCHD framework to autism spectrum disorder. Socioeconomic disadvantage and its influence on health development across the lifespan. The importance of nutrition to optimal health development across the lifespan. The Handbook of Life Course Health Development is a must-have resource for researchers, clinicians/professionals, and graduate students in developmental psychology/science; maternal and child health; social work; health

economics; educational policy and politics; and medical law as well as many interrelated subdisciplines in psychology, medicine, public health, mental health, education, social welfare, economics, sociology, and law.

Global players

The transition to adulthood is a longer and more complex process than it was just a few decades ago, and a growing number of youth and young adults experience significant challenges in the establishment of an autonomous and independent lifestyle when compared to previous generations. Successful high school graduation followed by employment is no longer the inevitable trajectory for young people, especially in the current socio-economic context where jobs are less accessible and more demanding in terms of specialized skills and higher academic qualifications. Unable to rely on family for emotional and financial support, vulnerable youth, who grow up in substitute care, are especially effected by the lengthening of this transition to adulthood. The dismal outcomes for youth growing up in care are by now well-documented, and more recently, a range of models have been proposed to help advance our understanding of these outcomes and how to forestall them. However, the literature on leaving care has long suffered from the absence of theory that could guide meaningful intervention. In response to this gap, *Leaving Care and the Transition to Adulthood* offers a comprehensive overview of the newest contributions to this area in relation to theory, in addition to the *Theory of Emerging Adulthood*, while also featuring cutting-edge research and best practices that support adjustment across a range of domains for this population. International in scope, this book focuses on bringing together major advances that span the literature on transitioning to adulthood within the care system, offering a unique and important contribution to the field.

Beyond Charity

International Security Studies (ISS) has changed and diversified in many ways since 1945. This book provides the first intellectual history of the development of the subject in that period. It explains how ISS evolved from an initial concern with the strategic consequences of superpower rivalry and nuclear weapons, to its current diversity in which environmental, economic, human and other securities sit alongside military security, and in which approaches ranging from traditional Realist analysis to Feminism and Post-colonialism are in play. It sets out the driving forces that shaped debates in ISS, shows what makes ISS a single conversation across its diversity, and gives an authoritative account of debates on all the main topics within ISS. This is an unparalleled survey of the literature and institutions of ISS that will be an invaluable guide for all students and scholars of ISS, whether traditionalist, 'new agenda' or critical.

Migrating Alone

Population, Land Use, and Environment: Research Directions offers recommendations for future research to improve understanding of how changes in human populations affect the natural environment by means of changes in land use, such as deforestation, urban development, and development of coastal zones. It also features a set of state-of-the-art papers by leading researchers that analyze population-land use-environment relationships in urban and rural settings in developed and underdeveloped countries and that show how remote sensing and other observational methods are being applied to these issues. This book will serve as a resource for researchers, research funders, and students.

Children and Youth as Subjects, Objects, Agents

The transition from adolescence to adulthood has undergone significant changes in recent decades. Unlike a half century ago, when young people in industrialized countries moved from adolescence into young adulthood in relatively short order at around age 20, now the decade from the late teens to the late twenties is seen as an extended time of self-focused exploration and education in pursuit of optimally fulfilling relationships and careers. Recognition of this new period is stronger than ever, but an important question remains: should emerging adulthood be considered a developmental stage, or a process? In *Debating Emerging Adulthood: Stage or Process?* two pairs of developmental psychologists take sides in a debate that is central to the very concept of emerging adulthood. Arnett and Tanner argue that as young people around the world share demographic similarities, such as longer education and later marriage, the years between the ages 18 and 25 are best understood as entailing a new life stage. However, because the experiences of emerging adults worldwide vary according to cultural context, educational attainment, and social class, these two scholars suggest that

there may not be one but many different emerging adulthoods. An important issue for this burgeoning area of inquiry is to explore and describe this variation. In contrast, Hendry and Kloeppel assert that stage theories have never been able to explain individual transitions across the life course; in their view, stage theories-including the theory of emerging adulthood-ought to be abolished altogether, and explanations found for the processes and mechanisms that govern human change at any age. This engaging book maps out the argument of "stage or process" in detail, with vigorous disagreements, conflicting alternatives, and some leavening humor, ultimately even finding some common ground. *Debating Emerging Adulthood* is an absolute must-read for developmental psychologists as well as anyone interested in this indisputably important time of life.

Leaving Care and the Transition to Adulthood

This report summarizes the presentations and discussion at a workshop entitled *Opportunities to Promote Child and Adolescent Development During the After-School Hours*, convened on October 21, 1999. The workshop was organized by the Board on Children, Youth, and Families and its Forum on Adolescence of the National Research Council and the Institute of Medicine, with funding from the David and Lucile Packard Foundation. This workshop brought together policy makers, researchers, and practitioners to examine research on the developmental needs of children and adolescents--"ages 5 to 14 years"--and the types of after-school programs designed to promote the health and development of these young people. Intended to provide a forum for discussion among the various stakeholders, the workshop did not generate conclusions about the types of programs that are most effective, nor did it generate specific recommendations about after-school programs or promote a particular approach. The workshop coincided with release of the Packard Foundation's fall 1999 issue of *The Future of Children*, entitled "When School Is Out." Focusing on after-school programs, the journal provided some context for the workshop, providing a backdrop for discussing the importance of after-school programs, the types of programs that exist across the country, and the policy climate that surrounds after-school programs. This report summarizes the workshop.

The Evolution of International Security Studies

In this classic edition top scholars in family research examine the nature and origin of adolescents' contemporary patterns of sexual and romantic relationships, from the evolutionary roots of these behaviors to policies and programs that represent best practices for addressing these issues in schools and communities. The text offers interdisciplinary expertise from scholars of psychology, social work, sociology, demography, economics, human development and family studies, and public policy. Adolescents and young adults today face very different choices about family formation than did their parents' generation, given such societal changes as the rise in cohabitation, the increase in divorce rates, and families having fewer children. This book examines these demographic trends and provides a backdrop against which adolescents and emerging adults form and maintain romantic and sexual

relationships. This book addresses such questions as: *What are the ways in which early family and peer relationships give rise to romantic relationships in the late adolescent and early adult years? *How do early romantic and sexual relationships influence individuals' subsequent development and life choices, including family formation? *To what extent are current trends in romantic and sexual relationships in adolescence and emerging adulthood problematic for individuals, families, and communities, and what are the most effective ways to address these issues at the level of practice, program, and policy? Ideal as a supplement in graduate or advanced undergraduate courses on interpersonal (romantic) relationships, adolescent development, human sexuality, couples and/or family and conflict, sociology of children and youth, family therapy taught in human development and family studies, clinical or counseling psychology, social work, sociology, communications, and human sexuality this book also appreciated by researchers and clinicians/counselors who work with families and adolescents.

Population, Land Use, and Environment

Emerging adulthood has been identified as an important developmental stage, characterised by identity exploration, instability and open possibilities, in which young people are no longer adolescents but have not yet attained full adult status. This ground-breaking edited collection is the first book to offer a comprehensive overview of emerging adulthood in a European context, which includes a comparison of findings in 9 different European countries and the USA. Each chapter, written by a leading European researcher, describes the socio-demographic characteristics of emerging adults, reviews the state of the field, synthesises new findings, and provides suggestions for how to move forward in research, interventions, and policy. The book examines how the traditional domain markers of adulthood, such as finishing education and caring for children, have changed. It also highlights how different factors such as gender, working status, living arrangements, romantic status and parental educational background affect the importance assigned to each set of adulthood criteria. The theory of emerging adulthood is further developed by considering how Arnett's emerging adulthood, Erikson's early adulthood, and Robinson's theory of early adult crisis fit together, and data is provided to support the new framework given. The book will be of great interest to researchers interested in these developmental transitions, and to advanced students of Emerging Adulthood on developmental psychology and lifespan courses, and related disciplines.

Debating Emerging Adulthood

Today's natural resource managers must be able to navigate among the complicated interactions and conflicting interests of diverse stakeholders and decisionmakers. Technical and scientific knowledge, though necessary, are not sufficient. Science is merely one component in a multifaceted world of decision making. And while the demands of resource management have changed greatly, natural resource education and textbooks have not. Until now. Ecosystem Management represents a different kind of textbook for a different kind of course. It offers a new and exciting approach that engages students in active problem solving by using detailed landscape scenarios that reflect the complex issues and conflicting interests that face today's resource managers and scientists. Focusing on the application of the sciences of ecology and conservation biology to real-world concerns, it emphasizes the intricate ecological, socioeconomic, and institutional matrix in which natural resource management functions, and illustrates how to be more effective in that challenging arena. Each chapter is rich with exercises to help facilitate problem-based learning. The main text is supplemented by boxes and figures that provide examples, perspectives, definitions, summaries, and learning tools, along with a variety of essays written by practitioners with on-the-ground experience in applying the principles of ecosystem management. Accompanying the textbook is an instructor's manual that provides a detailed overview of the book and specific guidance on designing a course around it. Ecosystem Management grew out of a training course developed and presented by the authors for the U.S. Fish and Wildlife Service at its National Training Center in Shepherdstown, West Virginia. In 20 offerings to more than 600 natural resource professionals, the authors learned a great deal about what is needed to function successfully as a professional resource manager. The book offers important insights and a unique perspective derived from that invaluable experience.

Growth Centres in Spatial Planning

Growth Centres in Spatial Planning examines the role of growth centers in spatial planning in terms of achieving the intended objectives. Intended objectives include improving a region's potential for adopting innovations, a saving in public investment on infrastructure, a more efficient pattern of service provision, a dissemination of growth impulses throughout the problem region, and the interception of would-be migrants from the region. More specifically, this book analyzes the extent to which growth-center policies are likely to attain these objectives and how such policies might be modified accordingly. This text consists of eight chapters and begins with an appraisal of growth-center theory and growth-center policy, along with the fundamental issues that are involved in putting such policies into practice. This is followed by a discussion on regional policies with a clear growth-center element in Scotland, Ireland, and France. The reader is then introduced to the link between urban centers and the diffusion of innovations; the degree to which the spatial concentration of investment is desirable in order to achieve the most economic pattern of service provision; and the role of spatial agglomeration in stimulating economic growth. The spatial impact of growth centers and the role of growth centers in generating, intercepting, and attracting migrants are also considered. This text concludes with a chapter that proposes some policy guidelines and directions for research. This book will be of interest to planners and policymakers involved in urban planning and regional development more generally.

Growth Poles and Growth Centres in Regional Planning

The expansion of the European Union in 2004 has had significant consequences for both existing and new members of the Union. New member states are assimilating into a new institutional and policy framework, while the changing geography of Europe provides a different context for policy development in pre-2004 member states. One of the more important fields in which these changes are impacting is regional development. The admission of the new countries changes patterns of economic and social disparities across the territory of the European Union, which in turn demands that existing approaches to regional development are reconsidered. An approach which has proved to be one of the most innovative is spatial planning. This book brings together a team of academics and policy makers from across the new Europe involved in regional development and spatial planning. Providing insights into different approaches, it offers a valuable opportunity to compare experiences across European borders.

Regional Development Planning and Management of Urbanization

Focussing particularly on urban fringe and rural areas, this book addresses the parallel phenomena of growth and decline. In doing so, it not only broadens a debate which generally concentrates on urban municipalities, especially inner city areas, but also covers new ground by starting to build a new theoretical framework for the spatial planning related assessment of these phenomena. Bringing together contributions from internationally renowned authors, such as Sir Peter Hall, Steve Ward and Johann Jessen, the book compares international case studies and highlights their relationships with one another. It concludes by emphasizing common themes that are addressed, as well as showing applicability to other urban and rural regions. Overall, the book provides a timely and comprehensive analysis of the spatial consequences and related spatial planning concepts in theory and practice which aim to further sustainable development of city regions, urban fringe and rural areas experiencing growth and decline.

Regional Development and Spatial Planning in an Enlarged European Union

Bringing together authors from academia and practice, this book examines spatial planning at different places throughout the British Isles. Six illustrative case studies of practice examine which conceptions of space and place have been articulated, presented and visualized through the production of spatial strategies. Ranging from a large conurbation (London) to regional (Yorkshire and Humber) and national levels, the case studies give a rounded and grounded view of the physical results and the theory behind them. While there is widespread support for re-orienting planning towards space and place, there has been little common understanding about what constitutes 'spatial planning', and what conceptions of space and place underpin it. This book addresses these questions and stimulates debate and critical thinking about space and place among academic and professional planners.

Parallel Patterns of Shrinking Cities and Urban Growth

This volume is based on two international seminars organised by the OECD and the National Land Agency, Japan which examines the emerging consensus concerning a new strategic mode for spatial policy.

Conceptions of Space and Place in Strategic Spatial Planning

Planning and Urban Growth in Nordic Countries examines urban development and planning in Denmark, Finland, Norway and Sweden. Emphasis is on the period from the mid-nineteenth century to the present day, and the authors of each 'country-study' look at their own national developments against the background of those in other Nordic countries well as the rest of Europe and the USA.

Towards a New Role for Spatial Planning

Regional Planning provides a comprehensive introduction to the concepts and theory of regional planning in the UK. Drawing on examples from throughout the UK, it provides students and practitioners with a descriptive and analytical foundation for understanding this rapidly changing area of planning. The book includes four main sections covering: the context and history of regional planning, theoretical approaches, evolving practice, future prospects. New questions and methods of theorizing are explored and new connections made with.

Planning and Urban Growth in Nordic Countries

This extensively revised fourteenth edition incorporates the major changes to planning introduced by the 2004 Planning and Compulsory Purchase Act and the government's mission to change the culture of planning. It provides a critical discussion of the system of planning – the institutions involved, the plans and other instruments that are used, the procedures for controlling development and land use change, and the mechanisms for implementing policy and proposals. It reviews current policy for sustainable development, housing and the Sustainable Communities Plan, the Barker Review, urban renewal and regeneration, the renaissance of city and town centres, the countryside, transport, and the heritage. Contemporary arrangements are explained with reference to their historical development, the influence of the European Union, the Labour government and changing social and economic demands for land use change. Detailed consideration is given to: the nature of planning and its historical evolution, policies for managing urban growth and delivering housing, sustainable development principles for planning social and economic development of the countryside, conserving the heritage, changes to the profession and education of planners. Special attention is given to the objective of improving the co-ordination of government policies through the spatial planning approach. The many recent changes to the system are explained in detail, and each chapter ends with notes on further reading, lists of official publications and an extensive bibliography, all of which enhances its reputation as the bible of British Planning.

Some Aspects of Regional Development and Growth Centres in North America and the United Kingdom

Spatial planning, strongly advocated by government and the profession, is intended to be more holistic, more strategic, more inclusive, more integrative and more attuned to sustainable development than previous approaches. In what the authors refer to as the New Spatial Planning, there is a fairly rapidly evolving maturity and sophistication in how strategies are developed and produced. Crucially, the authors argue that the reworked boundaries of spatial planning means that to understand it we need to look as much outside the formal system of practices of 'planning' as within it. Using a rich empirical resource base, this book takes a critical look at recent practices to see whether the new spatial planning is having the kinds of impacts its advocates would wish. Contributing to theoretical debates in planning, state restructuring and governance, it also outlines and critiques the contemporary practice of spatial planning. This book will have a place on the shelves of researchers and students interested in urban/regional studies, politics and planning studies.

Regional Planning

This book focuses on recent regional policy and planning debates in all the English regions.

Town and Country Planning in the UK

Instruments of Planning: Tensions and Challenges for more Equitable and Sustainable Cities critically explores planning's instrumentality to deliver important social and environmental outcomes in neoliberal planning landscapes. Because each instrument is unique and may be tailored to its own jurisdictional needs, *Instruments of Planning* is a compendium of case studies from urban regions in Australia, Canada, the United States and Europe, providing readers with a collection that critically challenges the role and potential of planning instruments and instrumentality across a range of contexts. *Instruments of Planning* captures the political, institutional, and economic challenges that confront planning. It examines planning instruments designed to assist with strategic planning and implementation, and considers the role that technology plays in unpacking and understanding complexity in planning. Written by Rebecca Leshinsky and Crystal Legacy of RMIT University in Melbourne, Australia, this book fills the gap in planning theory about the instrumentality of planning in the neoliberal urban context. It is essential reading for students, urban researchers, policy analysts and planning practitioners.

Regions, Spatial Strategies, and Sustainable Development

This book project highlights creative approaches to planning and local development. The dynamic complexity, diversity and fluidity which characterize contemporary society represent challenges for planning and development endeavours. While research and policy work has extensively focused on large cities and on metropolitan regions, there has been relatively little work on 'smaller places'. This book shows that if these new challenges affect all places and regions, small and medium-sized towns (SMSTs) are suffering many specific problems that call imperatively for the design and implementation of very imaginative, creative approaches to planning and local development. What could enhance creativity in local development and planning? Is it possible to talk about creative capacity building at the level of a town that might release imaginative and innovative activities? Under what local and non-local conditions is creativity being initiated and flourishing? What are the major obstacles and in what way can these be contained in order to safeguard pockets of creative action? Interdisciplinary and with case studies from France, Norway and other European countries, this volume presents a wide range of approaches and territorial contexts of small cities and towns in which spatial dynamics and the consequences of the city-region for urban planning theory and practice in Europe are highlighted, with a special focus on the challenges for - and understanding of - planning and development of SMSTs. It provides a significant body of critical, comparative and contextual perspectives on the quest for urban sustainability and resilience in SMSTs, therefore emphasizing collaborative and potentially innovative approaches that can be detected, but also the shortcomings, pitfalls and 'traps' that can lie behind the approaches aimed at concerting ecological, economic, and socio-cultural concerns, and the discourses promoting them.

National Physical Plan

This book presents an overview of urban and regional planning in Turkey. It discusses the fundamental topics and contemporary issues in the field. The book is organized in two parts and it includes 14 chapters. Chapter 1 is designed as an introduction defining the framework of urbanisation in Turkey, and the evolution of urban planning providing a background for the remaining chapters. In Part I, contemporary issues of urban and regional planning in Turkey are covered (i.e., new route taken by regional planning, the role of the planner in the process of shaping the urban form of Turkish cities, the specific features of Turkish city centres, large-scale public investments and their effects on urban areas, urban growth of Turkish cities from an urban morphological viewpoint, and problems and recent planning discussions related to the conservation of archaeological heritage). The challenges faced by urban and regional planning in Turkey are discussed in Part II (i.e., major challenges in residential transformation, excess housing production and the future of housing markets, challenges posed by increasing (global) immigration and refugees, challenges due to integration of a resilience thinking framework into the planning systems, development and planning activities of settlements in hazard prone areas, and the current state of climate policy and governance). In the concluding chapter an overall assessment of the contemporary issues and challenges for urban and regional planning in Turkey is made with special emphasis on the last 15 years of the country. Discussions on the case of Turkey could be useful examples both for developed and developing countries.

Regional Development Planning in India

This book is a comprehensive treatment of the twin processes of planning and development and is the only book to bring the two fields together in a single text.

An Introduction to Regional Planning

This book provides a multi-disciplinary study of territory, identity and space in a devolved UK, through the lens of spatial planning. It draws together leading internationally renowned researchers from a variety of disciplines to address the implications of devolution upon spatial planning and the rescaling of UK politics. Each contributor offers a different perspective on the core issues in planning today in the context of New Labour's regional project, particularly the government's concern with business competitiveness, and key themes are illustrated with important case studies throughout.

Spatial Aspects of Development

Originally published in 1984. Regional development planning has grown rapidly in recent years, as both an academic specialism and a focus of policy and practice. Books and articles on the subject have proliferated, and all across the Third World governments have become committed to it, setting up large new departments and even ministries. Charles Gore argues that this growing popularity of regional planning in developing countries is profoundly paradoxical.

Regional Planning

A new 21st century urban phenomenon is emerging: the networked polycentric mega-city region. Developed around one or more cities of global status, it is characterized by a cluster of cities and towns, physically separate but intensively networked in a complex spatial division of labour. This book describes and analyses eight such regions in North West Europe. For the first time, this work shows how businesses interrelate and communicate in geographical space - within each region, between them, and with the wider world. It goes on to demonstrate the profound consequences for spatial planning and regional development in Europe - and, by implication, other similar urban regions of the world. The Polycentric Metropolis introduces the concept of a mega-city region, analyses its characteristics,

examines the issues surrounding regional identities, and discusses policy ramifications and outcomes for infrastructure, transport systems and regulation. Packed with high quality maps, case study data and written in a clear style by highly experienced authors, this will be an insightful and significant analysis suitable for professionals in urban planning and policy, environmental consultancies, business and investment communities, technical libraries, and students in urban studies, geography, economics and town/spatial planning.

Urban and Regional Planning in Turkey

This is a wide-ranging and internationally-focussed introduction to planning for the urban landscape. It provides an up-to-date account of planning, reflecting throughout on the need for sustainable, efficient and equitable solutions to planning problems. Taking account of the sometimes conflicting expectations of markets, citizens, public organizations and planners, it demonstrates the similarities of challenges faced in different national planning systems. The author traces the historical evolution of planning and urban governance, and explores the range of urban problems and policies likely to be found in almost any city in the developed world. Combining the latest theory in the field with practical insight and numerous illustrative case studies, the author comprehensively addresses issues of economic change and development; retailing and the role of urban centres; housing provision and neighbourhood renewal; urban design and conservation; green and blue infrastructure; and mobility and accessibility. Assuming no prior knowledge of the subject, this text is the ideal accessible introduction to the planning field, giving equal focus to both theory and practice. Whilst celebrating the work of planners, it also provides essential critical analysis of how key decisions are made and implemented, the benefits and limitations of planning, and ultimately its potential in achieving 'good city form'.

Territory, Identity and Spatial Planning

The first worldwide overview of Planning Support Systems (PSS) and their application in practice. PSS are geo-technology related instruments consisting of theories, information, methods, tools, et cetera for support of unique professional public or private planning tasks at any spatial scale. The aim is to advance progress in the development of PSS, which are far from being effectively integrated into the planning practice. The text provides an Internet-based worldwide inventory of innovative examples and successful applications of PSS in a number of different planning contexts. In-depth insights into the purposes, content, workings, and applications of a very wide diversity of PSS are given.

Spatial Planning and Urban Development in the New EU Member States

In recent years many nations have asked why not enough housing is being built or, when it is built, why it isn't of the highest quality or in the best, most sustainable, locations. Politics, Planning and Housing Supply in Australia, England and Hong Kong examines the politics and planning of new homes in three very different settings, but with shared political traditions: in Australia, in England and in Hong Kong. It investigates the power-relationships and politics that underpin the allocation of land for large-scale residential schemes and the processes and politics that lead to particular development outcomes. Using a comparative framework, it asks: how different systems of urban governance and planning mediate the supply of land for housing; whether and how these system differences influence the location, quantity and price of residential land and the implications for housing outcomes; what can be learned from these different systems for allocating land, building consensus between different stakeholders, and delivering a steady supply of high quality and well located homes accessible to, and appropriate for, diverse housing needs. This book frames each case study in a comprehensive examination of national and territorial frameworks before dissecting key local cases. These local cases – urban renewal and greenfield growth centres in Australia, new towns and strategic sites in England, and major development schemes in Hong Kong – explore how broader urban planning and housing policy goals play out at the local level. While the book highlights a number of potential strategies for improving planning and housing delivery processes, the real challenge is to give voice to a broader array of interests, reconstituting the political process surrounding planning and housing development

to prioritise homes in well-planned places for the many, rather than simply facilitating investment opportunities for the few.
