Learn how to transition from Excel-based business intelligence (BI) analysis to enterprise stacks of open-source BI tools. Select and implement the best free and freemium open-source BI tools for your company's needs and design, implement, and integrate BI automation across the full stack using agile methodologies. Business Intelligence Tools for Small Companies provides hands-on demonstrations of open-source tools suitable for the BI requirements of small businesses. The authors draw on their deep experience as BI consultants, developers, and administrators to guide you through the extract-transform-load/data warehousing (ETL/DWH) sequence of extracting data from an enterprise resource planning (ERP) database freely available on the Internet, transforming the data, manipulating them, and loading them into a relational database. The authors demonstrate how to extract, report, and dashboard key performance indicators (KPIs) in a visually appealing format from the relational database management system (RDBMS). They model the selection and implementation of free and freemium tools such as Pentaho Data Integrator and Talend for ELT, Oracle XE and MySQL/MariaDB for RDBMS, and QlikSense, Power BI, and MicroStrategy Desktop for reporting. This richly illustrated guide models the deployment of a small company BI stack on an inexpensive cloud platform such as AWS. What You'll Learn You will learn how to manage, integrate, and automate the processes of BI by selecting and implementing tools to: Implement and manage the business intelligence/data warehousing (BI/DWH) infrastructure Extract data from any enterprise resource planning (ERP) tool Process and integrate BI data using open-source extract-transform-load (ETL) tools Query, report, and analyze BI data using open-source visualization and dashboard tools Use a MOLAP tool to define next year's budget, integrating real data with target scenarios Deploy BI solutions and big data experiments inexpensively on cloud platforms Who This Book Is For Engineers, DBAs, analysts, consultants, and managers at small companies with limited resources but whose BI requirements have outgrown the limitations of Excel spreadsheets; personnel in mid-sized companies with established BI systems who are exploring technological updates and more cost-efficient solutions

A Geological Survey in Transition

One part theory (borrowed from business world), one part practice (including detailed case studies of the University of Pittsburgh and the University of Arizona), one part inspiration: Beyond Survival offers ideas about how academic libraries can not only survive in the short term, but take advantage of emergent opportunities by judiciously adopting the same organizational development tools and concepts espoused by the business world. While there is a great deal of anecdotal evidence that significant organizational changes are taking place in academic libraries, the literature suggests that most of these changes take the form of evolutionary, or incremental improvement. But what happens when libraries find themselves in a society characterized by increased information availability

compression of time and space, and growing turbulence and unpredictability? These are conditions with which the business world has been grappling for years, conditions that require not an evolutionary approach, but nimbleness and rapid response. One part theory (borrowed from business world), one part practice (including detailed case studies of the University of Pittsburgh and the University of Arizona), one part inspiration, *Beyond Survival* shows you how the transition tactics and strategies developed by businesses can be adapted to academic libraries. By judiciously adopting the same organizational development tools and concepts espoused by the business world, academic libraries can not only survive in the short term, but can take advantage of emergent opportunities to ensure long-term excellence.

There is an urgent need for us all to work together to achieve robust and timely health advice and action whenever it is needed by looked after children and young people. Their carers need the support of clear policies and protocols, mandatory training and access to professional advice and help. This book crosses the boundaries between the various professionals involved. It aims to clarify some of the problems they all face and encourage us how to address them in partnership. Short case studies will help you to consider the truly difficult plight of these children and young people, and make the book come alive. It emphasises: accessing and providing continuous care; addressing the particular difficulties around engagement, relationships, confidentiality. All the authors have expertise in their field and between them a wealth of experience. Each chapter can be read alone, so you do not need to read cover to cover. This book is an easy reference guide: 'dip in' and find the appropriate information as required. It can be of use to anyone involved in or studying the care of looked after children and young people, regardless of your level or area of experience.

Platform Embedded Security Technology Revealed is an in-depth introduction to Intel's platform embedded solution: the security and management engine. The engine is shipped inside most Intel platforms for servers, personal computers, tablets, and smartphones. The engine realizes advanced security and management functionalities and protects applications' secrets and users' privacy in a secure, light-weight, and inexpensive way. Besides native built-in features, it allows third-party software vendors to develop applications that take advantage of the security infrastructures offered by the engine. Intel's security and management engine is technologically unique and significant, but is largely unknown to many members of the tech communities who could potentially benefit from it. *Platform Embedded Security Technology Revealed* reveals technical details of the engine. The engine provides a new way for the computer security industry to resolve critical problems resulting from booming mobile technologies, such as increasing threats against confidentiality and privacy. This book describes how this advanced level of protection is made possible by the engine, how it can improve users' security experience, and how third-party vendors can make use of it. It's written for computer security professionals and researchers; embedded system engineers; and software engineers and vendors who are interested in developing new security applications on top of Intel's security and management engine. It's also written for advanced users who are interested in understanding how the security features of Intel's platforms work.

The new edition of Marketing Communications delivers a rich blend of theory with examples of contemporary marketing practice. Providing a critical insight into how brands engage audiences, Fill and Turnbull continues to be the definitive marketing communications text for undergraduate and postgraduate students in marketing and related fields. The eighth edition, which contains two new chapters, reflects the changing and disruptive world of marketing communications. Throughout the text the impact of digital media and its ability to influence audience, client, and agency experiences, is considered. Each chapter has been extensively revised, with new examples, the latest theoretical insights, and suggested reading materials. Each of the 22 chapters also has a new case study, drawn from brands and agencies from around the world. Marketing Communications is recognised as the authoritative text for professional courses such as The Chartered Institute of Marketing, and is supported by the Institute of Practitioners in Advertising.

Impending technological advances will widen an adversary's attack plane over the next decade. Visualizing what the future will hold, and what new threat vectors could emerge, is a task that traditional planning mechanisms struggle to accomplish given the wide range of potential issues. Understanding and preparing for the future operating environment is the basis of an analytical method known as Threatcasting. It is a method that gives researchers a structured way to envision and plan for risks ten years in the future. Threatcasting uses input from social science, technical research, cultural history, economics, trends, expert interviews, and even a little science fiction to recognize future threats and design potential futures. During this human-centric process, participants brainstorm what actions can be taken to identify, track, disrupt, mitigate, and recover from the possible threats. Specifically, groups explore how to transform the future they desire into reality while avoiding an undesired future. The Threatcasting method also exposes what events could happen that indicate the progression toward an increasingly possible threat landscape. This book begins with an overview of the Threatcasting method with examples and case studies to enhance the academic foundation. Along with end-of-chapter exercises to enhance the reader's understanding of the concepts, there is also a full project where the reader can conduct a mock Threatcasting on the topic of "the next biological public health crisis." The second half of the book is designed as a practitioner's handbook. It has three separate chapters (based on the general size of the Threatcasting group) that walk the reader through how to apply the knowledge from Part I to conduct an actual Threatcasting activity. This book will be useful for a wide audience (from student to practitioner) and will hopefully promote new dialogues across communities and novel developments in the area.

Threatcasting

This book constitutes the refereed post-conference proceedings of the 12th TPC Technology Conference on Performance Evaluation and Benchmarking, TPCTC 2020, held in August 2020. The 8 papers presented were carefully reviewed and cover the following topics: testing ACID compliance in the

LDBC social network benchmark; experimental performance evaluation of stream processing engines made easy; revisiting issues in benchmarking metric selection; performance evaluation for digital transformation; experimental comparison of relational and NoSQL document systems; a framework for supporting repetition and evaluation in the process of cloud-based DBMS performance benchmarking; benchmarking AI inference; a domain independent benchmark evolution model for the transaction processing performance council.

The Exposome: A New Paradigm for the Environment and Health, Second Edition, is a thoroughly expanded and updated edition of The Exposome: A Primer, the first book dedicated to the topic. This new release outlines the purpose and scope of this emerging field of study, its practical applications, and how it complements a broad range of disciplines. The book contains sections on -omics-based technologies, newer detection methods, managing and integrating exposome data (including maps, models, computation and systems biology), and more. Both students and scientists in toxicology, environmental health, epidemiology and public health will benefit from this rigorous, yet readable, overview. This updated edition includes a more in-depth examination of the exposome, including full references, further reading and thought questions. Addresses an emerging field that connects with other exciting disciplines Written by a single author who is a leader in the field Includes new content that widely expands on the first edition

The Exposome

Has your IT organization felt the need for accurate asset management, reduced downtime with fewer desktide visits, and improved malware prevention and response? Want a solution for out-of-band manageability and security when the PC is in a low-power state or even powered off, the operating system is unresponsive, or software agents are disabled? Active Platform Management Demystified describes the manageability and security features in PCs equipped with Intel(r) vPro Technology which includes Intel(r) Active Management Technology (Intel(r) AMT). It goes into detail about how Intel AMT eases the burden of maintaining, managing and protecting PCs in both the Enterprise and Small Business environments according to Christoph Graham, Hewlett-Packard Technical Strategist, and will be very useful to anyone delivering Intel AMT solutions. Intel Active Management Technology provides an access point for the latest management consoles from Microsoft, Altiris, Cisco, LANDesk, HP and others so IT practitioners can access PCs over a wired or corporate wireless network- or even outside the corporate firewall through a wired LAN connection. This book keeps things clear and simple, even when discussing out-of-band operational details on IDE-Redirect and heuristic filters. The explanations illustrated using the Developer s Tool Kit are especially useful says Javier Caceres of Aranda Software Corporation.

The Children's Plan, conceived after consultation with both parents and professionals, sets out the Government's ambitions for improving children and young people's lives over the next decade. The six strategic objectives are to: secure the health and wellbeing of children and young people; safeguard the young and vulnerable; achieve world class standards; close the gap in educational achievement

for children from disadvantaged backgrounds; ensuring young people are participating in achieving their potential to 18 and beyond; and keeping children and young people on the path to success. The ambition depends on all children's services working together at the local level and the final chapter looks at the systems which are needed for this to happen

The computing world today is in the middle of a revolution: mobile clients and cloud computing have emerged as the dominant paradigms driving programming and hardware innovation today. The Fifth Edition of Computer Architecture focuses on this dramatic shift, exploring the ways in which software and technology in the cloud are accessed by cell phones, tablets, laptops, and other mobile computing devices. Each chapter includes two real-world examples, one mobile and one datacenter, to illustrate this revolutionary change. Updated to cover the mobile computing revolution Emphasizes the two most important topics in architecture today: memory hierarchy and parallelism in all its forms. Develops common themes throughout each chapter: power, performance, cost, dependability, protection, programming models, and emerging trends ("What's Next") Includes three review appendices in the printed text. Additional reference appendices are available online. Includes updated Case Studies and completely new exercises.

The bestselling textbook to understanding health research, updated and expanded Research Methods in Health Promotion provides students and practitioners with essential knowledge and skills regarding the design, implementation, analysis, and interpretation of research in the field of health promotion. Now in its second edition, this bestselling textbook has been updated with more recent research methodologies and additional information on sampling, participatory and survey research, and qualitative data analysis. The entire research process is covered, with specific points relating to both qualitative and quantitative research. By breaking the daunting process of research into simple and well-defined steps, this user-friendly text encourages students to think about research as a sequential process and provides explanations that facilitate better understanding of each step in the research process. A separate set of chapters cover the more quantitative methodological areas including designs, measurement, sampling, and data analysis in depth, giving readers the understanding they need to apply in practice. This book also provides applied chapters that illustrate the practical aspects of the research process, along with other critical information including grant writing and scientific writing. Evaluate the ethics, design, analysis, and interpretation of research Identify and understand the key components of research studies Analyze and interpret the results of experimental and survey research designs Understand the process of publishing a research report and constructing a grant proposal Research Methods in Health Promotion is ideal for both undergrad and graduate methods courses in health promotion and public health.

In Blaming the Brain Elliott Valenstein exposes the many weaknesses inherent in the scientific arguments supporting the widely accepted theory that biochemical imbalances are the main cause of mental illness. He lays bare the commercial motives of drug companies and their huge stake in expanding their markets. This provocative book will force patients, practitioners, and prescribers alike to rethink the causes of mental illness and the methods by which we treat it.

The Therapeutic Use of Self is a ground-breaking examination of the individual therapist's contribution to process and outcome in counselling. Using many powerful case examples and extensive research findings from the author's own work, this book presents the counsellor's evaluation of their own practice as the main vehicle for the development of insight and awareness in to individual 'therapeutic' characteristics. It addresses many of the taboos and infrequently discussed aspects of therapy, such as: * the value of therapist failure * breaking the rules of counselling * working beyond the accepted boundaries of counselling. The Therapeutic Use of Self, will act as a spur to individual counsellors to acknowledge, develop and value their own unique contribution to the counselling profession.

The 2018 FAO-OIE-WHO (Tripartite) zoonoses guide, "Taking A Multisectoral, One Health Approach: A Tripartite Guide to Addressing Zoonotic Diseases in Countries" (2018 TZG) is being jointly developed to provide member countries with practical guidance on OH approaches to build national mechanisms for multisectoral coordination, communication, and collaboration to address zoonotic disease threats at the animal-human-environment interface. The 2018 TZG updates and expands on the guidance in the one previous jointly-developed, zoonoses-specific guidance document: the 2008 Tripartite "Zoonotic Diseases: A Guide to Establishing Collaboration between Animal and Human Health Sectors at the Country Level", developed in WHO South-East Asia Region and Western Pacific Region. The 2018 TZG supports building by countries of the resilience and capacity to address emerging and endemic zoonotic diseases such as avian influenza, rabies, Ebola, and Rift Valley fever, as well as food-borne diseases and antimicrobial resistance, and to minimize their impacts on health, livelihoods, and economies. It additionally supports country efforts to implement WHO International Health Regulations (2005) and OIE international standards, to address gaps identified through external and internal health system evaluations, and to achieve targets of the Sustainable Development Goals. The 2018 TZG provides relevant country ministries and agencies with lessons learned and good practices identified from country-level experiences in taking OH approaches for preparedness, prevention, detection and response to zoonotic disease threats, and provides guidance on multisectoral communication, coordination, and collaboration. It informs on regional and country-level OH activities and relevant unisectoral and multisectoral tools available for countries to use.

The terror and purges of Stalin's Russia in the 1930s discouraged Soviet officials from leaving documentary records let alone keeping personal diaries. A remarkable exception is the unique diary assiduously kept by Ivan Maisky, the Soviet ambassador to London between 1932 and 1943. This selection from Maisky's diary, never before published in English, grippingly documents Britain's drift to war during the 1930s, appeasement in the Munich era, negotiations leading to the signature of the Ribbentrop–Molotov Pact, Churchill's rise to power, the German invasion of Russia, and the intense debate over the opening of the second front. Maisky was distinguished by his great sociability and access to the key players in British public life. Among his range of regular contacts were politicians (including Churchill, Chamberlain, Eden, and Halifax), press barons (Beaverbrook), ambassadors

(Joseph Kennedy), intellectuals (Keynes, Sidney and Beatrice Webb), writers (George Bernard Shaw, H. G. Wells), and indeed royalty. His diary further reveals the role personal rivalries within the Kremlin played in the formulation of Soviet policy at the time. Scrupulously edited and checked against a vast range of Russian and Western archival evidence, this extraordinary narrative diary offers a fascinating revision of the events surrounding the Second World War.

Revolutionary ideas on how to use markets to achieve fairness and prosperity for all Many blame today's economic inequality, stagnation, and political instability on the free market. The solution is to rein in the market, right? Radical Markets turns this thinking on its head. With a new foreword by Ethereum creator Vitalik Buterin and virtual reality pioneer Jaron Lanier as well as a new afterword by Eric Posner and Glen Weyl, this provocative book reveals bold new ways to organize markets for the good of everyone. It shows how the emancipatory force of genuinely open, free, and competitive markets can reawaken the dormant nineteenth-century spirit of liberal reform and lead to greater equality, prosperity, and cooperation. Only by radically expanding the scope of markets can we reduce inequality, restore robust economic growth, and resolve political conflicts. But to do that, we must replace our most sacred institutions with truly free and open competition—Radical Markets shows how.

You don't have to say yes to prove that you love them. "Describes helpful, pertinent, and loving ways to correct spoiled behavior before it becomes a serious problem." -ParentWorld Nearly 95% of parents feel like they are overindulging their children, but feel powerless to stopping themselves. How to Unspoil Your Child Fast offers a straightforward and practical solution to fixing and preventing the problems of spoiling your children and offers concrete tips, simple strategies, and easy action steps for reversing the effects almost immediately. Feel more confident, competent, and parent more consistently while instilling character and self-reliance in your children today. What parents are saying: "Wonderful, trenchant, and desperately needed." "Short, sweet and to the point for those of us who don't have time to waste." "Truly sensible and useful." "Although my daughters like being doted on, they think I parent better...when I utilize many of Dr. Bromfield's suggestions. I highly recommend this book." "A snappy read, so you can't claim you don't have time. And the method's simple, so you can't pretend you aren't qualified to use it." -Newsday

Paradox and Passion in Psychotherapy

Although outcomes for children in care have improved in recent years, there remains a significant and widening gap between these and the outcomes for all children. The childhood and adolescence of many of the 60,000 children in care at any one time is often characterised by insecurity, ill-health and lack of fulfilment, resulting in the fact that they are over-represented in a range of vulnerable groups, including the homeless, teenage parents, young offenders and prisoners, those not in post-16 education, employment or training, and drug users. This Green Paper from the Department for Education and Skills sets out a series of proposals which seek to address this situation by reforming both the way the care system works for children and the quality of experience they receive. Proposals include: an improved placements system with the focus on expanding the number and quality of foster carers; powers for local authorities to direct schools to admit children in care, even where the school is fully subscribed; pilot schemes to allow young people to continue to live with foster carers up to the age of 21 years; introduction of a national bursary for young people in care going to university; regular Ofsted inspections of how each local authority is meeting the educational needs of children in care; better support to prevent exclusions of children in care; and enhanced entitlement to free school transport to ensure children do not have to change school when they change placement. The

closing date for responses to this consultation document is 15 January 2007, either sent by email to: carematters.consultation@dfes.gsi.gov.uk or by post to: Consultation Unit, Area 1A, Castle View House, East Lane, Runcorn, Cheshire WA7 2GJ. A series of focus groups and workshops will be held throughout the consultation period to consider views on the Green Paper, and four working groups of interested stakeholders are being set up in order to explore issues in more detail (under the headings of the future of the care population, social care practices, placement reform, and best practice in schools) which will report to the DfES in Spring 2007.

How to Unspoil Your Child Fast

Now revised with a stronger emphasis on applications and more problems, this new Fourth Edition gives readers the opportunity to analyze, design, and evaluate linear circuits right from the start. The book's abundance of design examples, problems, and applications, promote creative skills and show how to choose the best design from several competing solutions. * Laplace first. The text's early introduction to Laplace transforms saves time spent on transitional circuit analysis techniques that will be superseded later on. Laplace transforms are used to explain all of the important dynamic circuit concepts, such as zero state and zero-input responses, impulse and step responses, convolution, frequency response, and Bode plots, and analog filter design. This approach provides students with a solid foundation for follow-up courses.

Care matters

"An excellent 'primer.' This is the type of text that I would have liked to have read when I was first introduced to the existential-phenomenological approach within psychology. It is clearly written and jargon-free. . . . I highly recommend this book as a very good introduction." --Mufid James Hannush in *Journal of Phenomenological Psychology* Are psychological problems brought on by social pressure, biology, culture, or personal pathology? Or are they the by-product of the essential paradoxes of human existence? This volume offers the practicing therapist a concrete framework for understanding both the role of the counselor and the concept of anxiety in contemporary society. But more importantly, the author demonstrates practical methods for applying an existential approach to counseling. Counseling is not presented as a problem-solving or skill-building exercise; rather, it is seen as a process enabling the client to come to terms with living life as it is, with all its inherent contradictions. Through an abundant use of case illustrations, the author clearly demonstrates the effectiveness of existential counseling in many different areas of therapy, from crisis intervention to work with chronic unhappiness. Written in a simple, elegant style by a leading authority on therapy techniques, this volume will prove an indispensable guide to the existential approach for all counselors and students of counseling. "Offers a very readable account of counselling from an existential perspective. Numerous case histories are used to illustrate common dilemmas in people's lives. . . . The book flows in a sensitive narrative on the problems of living and neurotic ways of denying and dealing with conflict. . . . It reads more like a commentary on people's lives, rather than a structured and informative introduction to Existential Counselling. . . . I enjoyed the book immensely and it is well recommended as a balance to the technically loaded manuals of today." --British Journal of Medical Psychology "This is a book worthy of wide acclaim as it fills a missing philosophical gap in therapy in Western civilization. The author writes clearly and simply in plain English. She presents existential thought as an easily accessible coherent body of work. The book is full of case histories where seemingly meaningless psychotic episodes are later explained. Also there are cases of despair, depression and meaninglessness quoted which is what makes this book so necessary for our times of mass production, mass media and mass alienation." --Suggestions: The Newsletter of the Association of Professional Therapists "A process of continuous questioning and clarification helps clients to examine their natural, public, private, and ideal worlds; to discover and explore their basic assumptions and view of the world; and thereby to learn what it means to be true to themselves. The book is intended for counselors and psychotherapists but can be enjoyed by anyone with an interest in existentialism, providing a coherent, readable, and easily understood description of existentialism and its use as a treatment form. It makes a strong case for the value of fostering independence and authenticity in clients through the use of the Socratic method rather than empathy. . . . This author emphasizes the role of the counselor as an educator. She cites many case histories, some of whose outcomes seem almost miraculous. the book is worth reading." --Readings: A Journal of Reviews and Commentary in Mental Health "A lucid, highly readable, and solid introduction to this school of thought in the helping professions. . . . An existential approach is appealing, particularly to helping professionals who concern themselves with their clients' spiritual needs." --Review and Expositor "This book provides an excellent source from which to examine

the extent to which cognitive therapy is informed by existentialism. The reader is promised a logical application of the ideas of existential philosophy that translate into practical counselling methods. This promise is fulfilled. The book is full of succinct case examples which illustrate the principles clearly." --British Journal of Guidance and Counselling

Byron's Address

The Second Edition takes a unique, active approach to teaching and learning introductory statistics that allows students to discover and correct their misunderstandings as chapters progress rather than at their conclusion. Empirically-developed, self-correcting activities reinforce and expand on fundamental concepts, targeting and holding students' attention. Based on contemporary memory research, this learner-centered approach leads to better long-term retention through active engagement while generating explanations. Along with carefully placed reading questions, this edition includes learning objectives, realistic research scenarios, practice problems, self-test questions, problem sets, and practice tests to help students become more confident in their ability to perform statistics.

The Analysis and Design of Linear Circuits

Bias analysis quantifies the influence of systematic error on an epidemiology study's estimate of association. The fundamental methods of bias analysis in epidemiology have been well described for decades, yet are seldom applied in published presentations of epidemiologic research. More recent advances in bias analysis, such as probabilistic bias analysis, appear even more rarely. We suspect that there are both supply-side and demand-side explanations for the scarcity of bias analysis. On the demand side, journal reviewers and editors seldom request that authors address systematic error aside from listing them as limitations of their particular study. This listing is often accompanied by explanations for why the limitations should not pose much concern. On the supply side, methods for bias analysis receive little attention in most epidemiology curriculums, are often scattered throughout textbooks or absent from them altogether, and cannot be implemented easily using standard statistical computing software. Our objective in this text is to reduce these supply-side barriers, with the hope that demand for quantitative bias analysis will follow.

Existential Counselling in Practice

This book constitutes the thoroughly refereed post-conference proceedings of the 8th TPC Technology Conference, on Performance Evaluation and Benchmarking, TPCTC 2016, held in conjunction with the 41st International Conference on Very Large Databases (VLDB 2016) in New Delhi, India, in September 2016. The 9 papers presented were carefully reviewed and selected from 20 submissions. They reflect the rapid pace at which industry experts and researchers develop innovative techniques for evaluation, measurement and characterization of complex systems.
