The Catalan modern classic, first published in 1985, now in its 50th edition, for the first time in English. The beginning of the 20th century: 13-year-old Conxa leaves her home village in the Pyrenees to work for her childless aunt. After years of hardship she finds love with Jaume - a love that will be thwarted

by the Spanish Civil War. Approaching her own death, Conxa looks back on a life in which she has lost everything except her own indomitable spirit. Why Peirene chose to publish this book: 'I fell in love with Conxa's narrative voice, its stoic calmness and the complete lack of anger and bitterness. It's a timeless voice, down to earth and full of human contradictory nuances. It's the expression of someone who searches for understanding in a changing world but senses that ultimately there may be no such thing.' Meike Ziervogel 'Sparse and haunting.' Katy Guest, Independent 'The compression is so deft, the young narrator's voice so strong, so particular, her straightforward evocation of the hard labour and rare pleasures of mountain life . . . so vibrant, that it makes me want to take scissors to everything else I read.' Richard Lea, Guardian 'A Pyrenean life told in a quietly effective voice.' Daniel Hahn, Independent 'There is an understated power in Barbal's depiction of how the forces of history can shape the life of the powerless.' Adrian Turpin, Financial Times 'A masterpiece of world literature and a shining example of the virtuosity of elegant and concise prose.' Pam Norfolk, Lancashire Evening Post 'Air-tight believability.' Matthew Tree, Times Literary Supplement INDEPENDENT BOOKS OF THE YEAR 2010 FOYLES BOOKS OF THE YEAR 2010

The Weightless World

How Students Learn: Science in the Classroom builds on the discoveries detailed in the best-selling How People Learn. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

Stone in a Landslide

This book presents and discusses an approach to action research to help reverse discriminatory and exclusionary practices in education. Insider accounts of action research will help challenge assumptions about the limits of inclusive education, and offer examples of how change can be realistically achieved through processes of collaboration and participation. Written by a team of practitioner researchers drawn from a wide range of schools and services, this book addresses a wide range of real-life situations by exploring ways in which teachers have tackled inequalities in the school environment through action research based on principles of equality and democracy. These include: * the co-ordination of services for minority ethnic groups, including refugee and asylum seeking children * young children with autism working with peers in the literacy hour * action research and the inclusion of gay students * developing the role of learning support assistants in inclusion * reducing exclusion of children with challenging behaviour * listening to the voices of young people with severe learning difficulties * developing links between special and mainstream schools * challenging marginalising practices in Further Education.

This distinctive cross-linguistic examination of spelling examines the cognitive processes that underlie spelling and the process of learning how to spell. The chapters report and summarize recent research in English, German, Hebrew, and French. Framing the specific research on spelling are chapters that place spelling in broad theoretical perspectives provided by cognitive neuroscience, psycholinguistic, and writing system-linguistic frameworks. Of special interest is the focus on two major interrelated issues: how spelling is acquired and the relationship between reading and spelling. An important dimension of the book is the interweaving of these basic questions about the nature of spelling with practical questions about how children learn to spell in classrooms. A motivating factor in this work was to demonstrate that spelling research has become a central challenging topic in the study of cognitive processes, rather than an isolated skill learned in school. It thus brings together schooling and learning issues with modern cognitive research in a unique way. Testing, children writing strings of letters as a teacher pronounces words ever so clearly. In parts of the United States it can also bring an image of specialized wizardry and school room competition, the "spelling bee." And for countless adults who confess with self-deprecation to being "terrible spellers," it is a reminder of a mysterious but minor affliction that the fates have visited on them. Beneath these popular images, spelling is a human literacy ability that reflects language and nonlanguage cognitive processes. This collection of papers presents a sample of contemporary research across different languages that addresses this ability. To understand spelling as an interesting scientific problem, there are several important perspectives. First, spelling is the use of conventionalized writing systems that encode languages. A second asks how children learn to spell. Finally, from a literacy point of view, another asks the extent to which spelling and reading are related. In collecting some of the interesting research on spelling, the editors have adopted each of these perspectives. Many of the papers themselves reflect more than one perspective, and the reader will find important observations about orthographies, the relationship between spelling and reading, and issues of learning and teaching throughout the collection.

Talleres integrales en educación infantil

Explicating clearly and concisely the full implication of a praxis-oriented language pedagogy, this book argues for an approach to language teaching grounded in a significant scientific theory of human learning—a stance that rejects the consumer approach to theory and the dichotomy between theory and practice that dominates SLA and language teaching. This approach is based on Vygotsky's sociocultural theory, according to which the two activities are inherently connected so that each is necessarily rooted in the other; practice is the research laboratory where the theory is tested. From the perspective of language education, this is what is meant by the 'pedagogical imperative.' Sociocultural Theory and the Pedagogical Imperative in L2 Education • Elaborates a new approach to dealing with the relationship between theory and practice—an approach grounded in praxis—the dialectical unity of theory and practice • Presents an analysis of empirical research illustrating praxis-based principles in real language classrooms • Brings together cognitive linguistics and sociocultural theory the former provides the theoretical knowledge of language required of praxis and the latter furnishes the theoretical principles of learning and development also called for in a praxis approach • Offers recommendations for redesigning teacher education programs Its timely focus on the theory-practice gap in language education and its original approach to bridging it put this book at the cutting edge of thinking about Vygotskian sociocultural theory in applied linguistics and SLA.

Improving School Leadership The Toolkit

Governments, local authorities, school leaders, and teachers all over the world want to improve the educational attainment and participation of all students, and to minimise any systematic differences in outcomes for social and economic groups. A particular concern is for those students from backgrounds that may objectively disadvantage them at school and beyond. However, considerable effort and money is currently being wasted on policies, practices and interventions that have very little hope of success, and that may indeed endanger the progress that is being made otherwise. The poor quality of much education research evidence, coupled with an unwillingness among users of evidence to discriminate appropriately between what we know and do not know, means that opportunities are being missed. At a time of reduced public spending it is important that proposed interventions are both effective and efficient. Overcoming Disadvantage in Education is unique in the way that it: Shows

where the solutions to underachievement and poverty lie combines primary(new), secondary (official) and published (review) evidence distinguishes between those possible causes of underachievement that are largely fixed for individuals, and those that are modifiable. There are evidence-informed ways forward in handling under-achievement and increasing social justice in education. This book shows which the more likely approaches are, and where further work could yield further benefits. This book will be a key text for students, developing academic researchers and supervisors in the social sciences, and for those research users charged with improving educational outcomes.

Science Education Now

Society, globally, has entered into what might be called the "service economy." Services now constitute the largest share of GDP in most countries and provide the major source of employment in both developed and developing countries. Services permeate all aspects of peoples' lives and are becoming inseparable from most aspects of economic activity. "Quality management" has been a dominating managerial practice since World War II. With quality management initially associated with manufacturing industries, one might assume the relevance of quality management might decrease with the emergence of the service economy. To the contrary, the emergence of the service economy strengthened the importance of quality issues, which no longer are associated only with manufacturing industries but are increasingly applied in all service sectors, as well. Today, we talk not only about product or service quality but have even expanded the framework of quality to quality of life and quality of environment. Thus, quality and services have emerged in parallel as closely interrelated fields. The Encyclopedia of Quality and the Service Economy explores such relevant questions as: What are the characteristics, nature, and definitions of quality and services? How do we define quality of products, quality of services, or quality of life? How are services distinguished from goods? How do we measure various aspects of quality and services? How can products and service quality be managed most effectively and efficiently? What is the role of customers in creation of values? These questions and more are explored within the pages of this two-volume, A-to-Z reference work.

Sociocultural Theory and the Pedagogical Imperative in L2 Education

In an era of globalization, technological innovation, and social transformations, universities face the challenge of training students with the competencies needed to meet the demands of the market and to successfully integrate into today's workforce. This book looks at the university as a dynamic source of essential competencies and explores various skill management models, methodologies and innovations applied by educational institutions around the world. The demands of today's society

represent a major challenge for universities and their teaching staffs. Professors need to adapt their teaching methods to meet these new challenges. For example, universities need to prepare new generations of students with the ability to select, update and use knowledge, rather than processing facts and formulas. Students need to be capable of learning in different contexts and modalities throughout their professional careers and learn to adapt their knowledge to new situations. In response, a conceptual and methodological change has taken place in the university organizational culture and in student curriculums. This book presents a variety of cases and observations on the competencies developed in the curriculums of universities around the world, with the aim to assure that graduates leave fully prepared to face the challenges of the new economy.

Overcoming Disadvantage in Education

To achieve quality education in American schools, we need a better understanding of the way classroom instruction works. Susan S. Stodolsky addresses this need with her pioneering analysis of the interrelations between forms of instruction, levels of student involvement, and subject matter. Her intensive observation of fifth-grade math and social studies classes reveals that subject matter, a variable overlooked in recent research, has a profound effect on instructional practice. Stodolsky presents a challenge to educational research. She shows that classroom activities are coherent actions shaped by the instructional context—especially what is taught. Stodolsky contradicts the received view of both teaching and learning as uniform and consistent. Individual teachers arrange instruction very differently, depending on what they are teaching, and students respond to instruction very differently, depending on the structure and demands of the lesson. The instructional forms used in math classes, a "basic" subject, and social studies classes, an "enrichment" subject, differ even when the same teacher conducts both classes. Social studies classes show more diversity in activities, while math classes are very similar to one another. Greater variety is found in social studies within a given teacher's class and when different teachers' classes are compared. Nevertheless, in the classrooms Stodolsky studied, the range of instructional arrangements is very constricted. Challenging the "back to basics" movement, Stodolsky's study indicates that, regardless of subject matter, students are more responsive to instruction that requires a higher degree of intellectual complexity and performance, to learning situations that involve them in interaction with their peers, and to active modes of learning. Stodolsky also argues that students develop ideas about how to learn a school subject, such as math, by participating in particular activities tied to instruction in the subject. These conceptions about learning are unplanned but enduring and significant consequences of schooling. The Subject Matters has important implications for instructional practice and the training, education, and supervision of teachers. Here is a new way of understanding the dynamics of teaching and learning that will transform how we think about schools and how we study them.

The BSCS 5E Instructional Model

Piagetian theory was once considered able to describe the structure and development of human thought. As a result, it generated an enthusiasm that it could direct education to develop new teaching methods, particularly in science and mathematics. However, disillusionment with Piagetian theory came rather quickly because many of its structural and developmental assumptions appeared incongruent with empirical evidence. In recent years several neo-Piagetian theories have been proposed which try to preserve the strengths of Piaget's theory, while eliminating its weaknesses. At the same time several other models have been advanced originating from different epistemological traditions, such as cognitive/differential psychology or socio-historical approaches. Originally published in 1992, this title was unique in representing most of these theories and traditions. Specifically, the authors focus their work on the educational implications of their research. The chapters are organised in three parts: the first part presents some widely known models of cognitive development and discusses their implications for different aspects of education; the second part is devoted to learning and cognitive acceleration; while part three highlights teaching methods that would improve the acquisition of particular skills in specific areas. Written by an eminent group of truly international contributors, this title will still be useful to students and researchers in cognitive development and education, as well as educational policy makers.

Opening the Book

This book provides teacher educators, administrators, practicing teachers who work with preservice teachers, policymakers, and researchers with information on the conceptual, research, and application

areas of service-learning in preservice teacher education. The collection of papers offers teacher educators' thoughts about ways to enhance the usefulness of service-learning in preservice teacher preparation. The book is grouped into five main parts. Part 1 deals with theories, standards, and principles of practice. Part 2 includes several research studies and reviews as well as a suggested framework for further research and development. Part 3 explicates 11 different approaches to implementing service-learning in teacher education in the form of case studies. Part 4 deals with administrative and organizational arrangements as well as issues surrounding the teaching of service-learning, diversity, and assessment. Part 5 presents thoughts for the future from one of service-learning's long-standing adherents and researchers. It also includes an annotated bibliography. Three appendixes include: standards of quality for school-based and community-based service-learning; tools for teaching the pedagogy of service-learning; and contributing authors. This book presents a systematic overview of the most relevant nanomaterials and their respective intrinsic properties that have been highly explored by the scientific community and pharmaceutical companies in several different modalities for cancer therapy and bioimaging. The chapters explore the synergistic effects provided by the different nanostructured materials and highlight the main in vitro and in vivo therapeutic achievements on cancer. This work also provides relevant discussion about the recent progresses and future challenges that nanotechnology faces on the conception of more efficient nanoformulations against primary tumors, circulating cancer cells and metastases.

The SAGE Encyclopedia of Quality and the Service Economy

Pushing past the constraints of postmodernism which cast "reason" and "religion" in opposition, God, the Gift, and Postmodernism, seizes the opportunity to question the authority of "the modern" and open the limits of possible experience, including the call to religious experience, as a new millennium approaches. Jacques Derrida, the father of deconstruction, engages with Jean-Luc Marion and other religious philosophers to entertain questions about intention, givenness, and possibility which reveal the extent to which deconstruction is structured like religion. New interpretations of Kant, Heidegger, Husserl, and Derrida emerge from essays and discussions with distinguished philosophers and theologians from the United States and Europe. The result is that God, the Gift, and Postmodernism elaborates a radical phenomenology that stretches the limits of its possibility and explores areas where philosophy and religion have become increasingly and surprisingly convergent. Contributors include: John D. Caputo, John Dominic Crossan, Jacques Derrida, Robert Dodaro, Richard Kearney, Jean-Luc Marion, Frangoise Meltzer, Michael J. Scanlon, Mark C. Taylor, David Tracy, Merold Westphal and Edith Wyschogrod.

Boletín Internacional de Bibliografía Sobre Educación

The concept of "psychological tools" is a cornerstone of L. S. Vygotsky's sociocultural theory of cognitive development. Psychological tools are the symbolic cultural artifacts--signs, symbols, texts, formulae, and most fundamentally, language--that enable us to master psychological functions like memory, perception, and attention in ways appropriate to our cultures. In this lucid book, Alex Kozulin argues that the concept offers a useful way to analyze cross-cultural differences in thought and to develop practical strategies for educating immigrant children from widely different cultures. Kozulin begins by offering an overview of Vygotsky's theory, which argues that consciousness arises from communication as civilization transforms "natural" psychological functions into "cultural" ones. He also compares sociocultural theory to other innovative approaches to learning, cognitive education in particular. And in a vivid case study, the author describes his work with recent Ethiopian immigrants to Israel, whose traditional modes of learning were oral and imitative, and who consequently proved to be quick at learning conversational Hebrew, but who struggled with the reading, writing, and formal problem solving required by a Western classroom. Last, Kozulin develops Vygotsky's concept of psychological tools to promote literature as a useful tool in cognitive development. With its explication of Vygotsky's theory, its

case study of sociocultural pedagogy, and its suggested use of literary text for cognitive development, Psychological Tools will be of considerable interest to research psychologists and educators alike.
