Self-Stabilizing Autonomic Recoverers - Self-Stabilizing Autonomic Recoverers by Microsoft Research 38 views 7 years ago 58 minutes - This talk introduces theoretical foundations for system architectures and algorithms for creating truly robust **autonomic**, systems ...

Intro

Automatic recovery, self-managing systems, self-healing systems, evolving systems, dependable systems... • Imply need for robust and stable systems instead of performance optimised systems. Theoretic approach based on classic fault tolerance theory Problem formalization • Generic framework architecture • Correctness proof guidelines

Long-running continuously executing systems that must remain up and running, "absorbing" unexpected faults - Cloud computing - Control systems - Storage systems

Self-Stabilizing Autonomic Recoverer for Eventual Byzantine Software

Software should respect its specifications - Safety, Liveness • Atomic power station - Safety: the atomic station shouldn't

Software package is a black box. Package is monitored by recording its IO - strace in Linux - software package implementation tool is known: run-time reflection tools

Recovery Oriented Programming Software package is a transparent box. Self-stabilizing platform - Self-stabilizing processor and OS - Processes exist and execute their code • Original program is

eventual Byzantine

Correctness Proof Outline: - Black Box - Transparent Box

Assumption: Processes and external monitors are scheduled fairly due to presence of self-stabilizing software platform • Safety: process either reaches monitoring section in its code or its external monitor makes scheduled check - Subsystem: external monitor makes scheduled

Liveness: the process (subsystem) external monitor makes scheduled check of the history log •

Corrupted history: - If causes (unnecessary) recovery - trimmed - New correct records are eventually accumulated

Self-* Programming: Run-Time Parallel Control Search for Reflection Box

Our Contribution: Automatic Control Search Engine for Dynamic Environment • No assumptions on possible environment changes • Experimentation on replicas Parallelization of experiments

System Environment Control

Control Search Algorithms for Deterministic Environment
