Things have never been easy for Oscar. A ghetto nerd living with his Dominican family in New Jersey, he's sweet but disastrously overweight. He dreams of becoming the next J.R.R. Tolkien and he keeps

falling hopelessly in love. Poor Oscar may never get what he wants, thanks to the Fukú - the curse that has haunted his family for generations. With dazzling energy and insight Díaz immerses us in the tumultuous lives of Oscar; his runaway sister Lola; their beautiful mother Belicia; and in the family's uproarious journey from the Dominican Republic to the US and back. Rendered with uncommon warmth and humour, *The Brief Wondrous Life of Oscar Wao* is a literary triumph, that confirms Junot Díaz as one of the most exciting writers of our time.

The rich Indian medical tradition is usually traced back to Sanskrit sources, the earliest of which cannot much antedate the common era. In this book Kenneth Zysk shows that Buddhist scriptures some centuries older than this contain abundant information about medical practice, and are our earliest evidence for a rational approach to medicine in India. He argues that Buddhism and the medical tradition were mutually supportive: that Buddhist monks and people associated with them contributed to the development of medicine, while their skills as physical as well as spiritual healers enhanced their reputation and popular support. Drawing on a wide range of textual, archaeological, and secondary sources, Zysk first presents an overview of the history of Indian Medicine in its religious context. He then examines primary literature from the Pali Buddhist Canon and from the Sanskrit treatises of Bhela, Caraka, and Susruta. By close comparison of these two bodies of literature Zysk convincingly shows how the theories delineated in the medical classics actually became practice.

Located deep within the anterior hip joint and lower spine, the psoas major (usually just referred to as the psoas) is critical for optimal postural alignment, movement, and overall well being. The psoas is the only muscle in the human organism that connects the upper body to the lower body, and its importance extends to the nerve complex and energy systems. As modern-day populations grow more sedentary, psoas-related lower back and hip pain, and the ailment of "sitting too much," are on the rise. Even the most active of athletes can suffer from psoas imbalance and pain. *The Vital Psoas Muscle* demonstrates how to keep the muscle in balance through specific exercises designed to strengthen and utilize this amazing muscle, and discusses its vital role in the emotional and spiritual state of the human being. The interconnection between the psoas and the root chakra is explored, along with yoga poses and postures that stimulate the psoas. Eighty full-color illustrations depict anatomical details, and show the key stretching and strengthening exercises in this practical and comprehensive treatment of the most important skeletal muscle in the human body.

Asceticism and Healing in Ancient India

Coiled like a snake at the base of the spine, kundalini is the spiritual force that lies dormant in every human being. Once awakened, often through meditation and yoga practices, it rises up the spine and finds expression in the form of spiritual knowledge, mystical vision, psychic powers, and ultimately, enlightenment. This is the classic first-person account of Gopi Krishna, an ordinary Indian householder who, at the age of thirty-four, after years of unsupervised meditation, suddenly experienced the awakening of kundalini during his morning practice. The story of this transformative experience, and the author's struggle to find balance amid a variety of powerful physiological and psychic side effects, forms the core of the book. His detailed descriptions of his dramatic inner experiences and symptoms such as mood swings, eating disorders, and agonizing sensations of heat—and of how, with the help of his wife, he finally stabilized at a higher level of consciousness—make this one of the most valuable classics of spiritual awakening available.

The Vital Psoas Muscle

Sarah is growing up fast. She swings on swings, slides down slides, and climbs trees. Whenever she falls, her mother sweeps her up in her arms and soothes away the hurt. Her mother is always there for her—on her first day of school, when she falls in love for the first time, and finally when she leaves home and starts a family of her own. It is then that Sarah realizes what a wonderful gift her mother

has given her. As she watches over a daughter of her own, Sarah passes on that gift, helping her child through the trials of growing up with a gentle strength and enduring love. This beautiful testament to the powerful bond between mothers and daughters will move and inspire mothers while reassuring their daughters that they have a special safety net that will never let them down. Anna Strauss was only sixteen-years-old when she was inspired to write this story as a gift for her mother. Now her enchanting story makes a perfect gift to celebrate the special mother/daughter bond on Mother's Day, Graduation Day, and all year round.

This New York Times Book Review Editors' Choice, is "hilarious . . . a riotous success. Equal parts campus novel, buddy comedy and meditation on art-making under late capitalism, the novel is a hugely funny portrait of an egomaniac and his nebbish best friend" (The Washington Post). It's the end of summer 2003. George W. Bush has recently declared the mission in Iraq accomplished, the unemployment rate is at its highest in years, and Martha Stewart has just been indicted for insider trading. Meanwhile, somewhere in the Midwest, Troy Augustus Loudermilk (fair-haired, statuesque, charismatic) and his companion Harry Rego (definitely none of those things) step out of a silver Land Cruiser and onto the campus of The Seminars, America's most prestigious creative writing program, to which Loudermilk has recently been accepted for his excellence in poetry. Loudermilk, however, has never written a poem in his life. Wickedly entertaining, beguiling, layered, and sly, Loudermilk is a social novel for our time: a comedy of errors that deftly examines class, gender, and inheritance, and subverts our pieties about literature, authorship, art making, and the institutions that sustain them.

In his much-anticipated memoir, *The Company I Keep: My Life in Beauty*, Chairman Emeritus and former CEO of The Estée Lauder Companies Leonard A. Lauder shares the business and life lessons he learned as well as the adventures he had while helping transform the mom-and-pop business his mother founded in 1946 in the family kitchen into the beloved brand and ultimately into the iconic global prestige beauty company it is today. In its infancy in the 1940s and 50s, the company comprised a handful of products, sold under a single brand in just a few prestigious department stores across the United States. Today, The Estée Lauder Companies constitutes one of the world's leading manufacturers and marketers of prestige skin care, makeup, fragrance and hair care products. It comprises more than 25 brands, whose products are sold in over 150 countries and territories. This

growth and success was led by Leonard A. Lauder, Estée Lauder's oldest son, who envisioned and effected this expansion during a remarkable 60-year tenure, including leading the company as CEO and Chairman. In this captivating personal account complete with great stories as only he can tell them, Mr. Lauder, now known as The Estée Lauder Companies' "Chief Teaching Officer," reflects on his childhood, growing up during the Great Depression, the vibrant decades of the post-World War II boom, and his work growing the company into the beauty powerhouse it is today. Mr. Lauder pays loving tribute to his mother Estée Lauder, its eponymous founder, and to the employees of the company, both past and present, while sharing inside stories about the company, including tales of cutthroat rivalry with Charles Revson of Revlon and others. The book offers keen insights on honing ambition, leveraging success, learning from mistakes, and growing an international company in an age of economic turbulence, uncertainty, and fierce competition.

Yoga is well known for its power to create a healthy body, but few realize the emotional and spiritual benefits. Devi's simple, elegant, and deeply personal interpretations capture the spirit of each sutra, and her suggested practices offer numerous ways to embrace the spirituality of Yoga throughout your day.

For modern spiritual seekers and yoga students alike, here is an irreverent yet profound guide to the most sophisticated teachings of the yoga wisdom tradition—now brought to contemporary life by a celebrated author, psychotherapist, and leading American yoga instructor. While many Westerners still think of yoga as an invigorating series of postures and breathing exercises, these physical practices are only part of a vast and ancient spiritual science. For more than three millennia, yoga sages systematically explored the essential questions of our human existence: What are the root causes of suffering, and how can we achieve freedom and happiness? What would it be like to function at the maximum potential of our minds, bodies, and spirits? What is an optimal human life? Nowhere have their discoveries been more brilliantly distilled than in a short—but famously difficult—treatise called the *Yogasutra*. This revered text lays out the entire path of inner development in remarkable detail—ranging from practices that build character and mental power to the highest reaches of spiritual realization. Now Stephen Cope unlocks the teachings of the *Yogasutra* by showing them at work in the lives of a group of friends and fellow yoga students who are confronting the full modern catastrophe of careers, relationships, and dysfunctional family dynamics. Interweaving their daily dilemmas with insights from modern psychology, neuroscience, religion, and philosophy, he shows the astonishing relevance and practicality of this timeless psychology of awakening. Leavened with wit and passion, *The Wisdom of Yoga* is a superb companion and guide for anyone seeking enhanced creativity, better relationships, and a more ethical and graceful way of living in the world.

Restoring Ecological Health to Your Land is the first practical guidebook to give restorationists and would-be restorationists with little or no scientific training or background the “how to” information and knowledge they need to plan and implement ecological restoration activities. The book sets forth a step-by-step process for developing, implementing, monitoring, and refining on-the-ground restoration projects that is applicable to a wide range of landscapes and ecosystems. The first part of the book introduces the process of ecological restoration in simple, easily understood language through specific examples drawn from the authors’ experience restoring their own lands in southern and central Wisconsin. It offers systematic, step-by-step strategies along with inspiration and benchmark experiences. The book’s second half shows how that same “thinking” and “doing” can be applied to North America’s major ecosystems and landscapes in any condition or scale. No other ecological restoration book leads by example and first-hand experience like this one. The authors encourage readers to champion restoration of ecosystems close to where they live . . . at home, on farms and ranches, in parks and preserves. It provides an essential bridge for people from all walks of life and all levels of experience—from land trust member property stewards to agency personnel responsible for restoring lands in their care—and represents a unique and important contribution to the literature on restoration.

Alec Soth's *Sleeping by the Mississippi* is one of the defining publications of the photo-book era. First published in 2004, it was Soth's first book and sold through three editions, establishing him as a leading light of contemporary photographic practice. Evolving from a series of road trips along the Mississippi river, America's iconic yet oft-neglected 'third coast', Soth's richly descriptive, large-format colour photographs present an eclectic mix of individuals, landscapes, and interiors. Sensuous in detail and raw in subject, the work elicits a consistent mood of loneliness, longing, and reverie. This MACK edition includes two photographs not published in the prior versions.

In this critical history, DeForrest Brown, Jr "makes techno Black again" by tracing the music's origins in Detroit and beyond In Assembling a Black Counter Culture, writer and musician DeForrest Brown, Jr, provides a history and critical analysis of techno and adjacent electronic music such as house and electro, showing how the genre has been shaped over time by a Black American musical sensibility. Brown revisits Detroit's 1980s techno scene to highlight pioneering groups like the Belleville Three before jumping into the origins of today's international club floor to draw important connections between industrialized labor systems and cultural production. Among the other musicians discussed are Underground Resistance (Mad Mike Banks, Cornelius Harris), Drexciya, Juan Atkins (Cybotron, Model 500), Derrick May, Jeff Mills, Robert Hood, Detroit Escalator Co. (Neil Olliviera), DJ Stingray/Urban Tribe, Eddie Fowlkies, Terrence Dixon (Population One) and Carl Craig. With references to Theodore Roszak's Making of a Counter Culture, writings by African American autoworker and political activist James Boggs, and the "techno rebels" of Alvin Toffler's Third Wave, Brown approaches techno's unique history from a Black theoretical perspective in an effort to evade and subvert the racist and classist status quo in the mainstream musical-historical record. The result is a compelling case to "make techno Black again." DeForrest Brown, Jr is a New York-based theorist, journalist and curator. He produces digital audio and extended media as Speaker Music and is a representative of the Make Techno Black Again campaign.

101 Dalmatians

An energetic, witty collection of stories where the supernatural meets the anomalies of everyday life--deception, infidelity, lost cats, cute memes, amateur pornography, and more. There are analogies between being female and being left-handed, I think, or being an animal. A woman answers a Craigslist ad (to write erotic diaries for money). A woman walks onto a tennis court (from her home at the bottom of the ocean). A woman goes to the supermarket and meets a friend's husband (who happens to be an immortal demon). A woman goes for a run (and accidentally time travels). Cosmogony takes accounts of so-called normal life and mines them for inconsistencies, deceptions, and delights. Incorporating a virtuosic range of styles and genres (Wikipedia entry, phone call, physics equation,

encounters with the supernatural), these stories reveal how the narratives we tell ourselves and believe are inevitably constructed, offering a glimpse of the structures that underlie and apparently determine human existence.

Rosalie and Other Love Songs

The hegemony of finance compels a new orientation for everyone and everything: companies care more about the moods of their shareholders than about longstanding commercial success; governments subordinate citizen welfare to appeasing creditors; and individuals are concerned less with immediate income from labor than appreciation of their capital goods, skills, connections, and reputations. That firms, states, and people depend more on their ratings than on the product of their activities also changes how capitalism is resisted. For activists, the focus of grievances shifts from the extraction of profit to the conditions under which financial institutions allocate credit. While the exploitation of employees by their employers has hardly been curbed, the power of investors to select investees — to decide who and what is deemed creditworthy — has become a new site of social struggle. In clear and compelling prose, Michel Feher explains the extraordinary shift in conduct and orientation generated by financialization. Above all, he articulates the new political resistances and aspirations that investees draw from their rated agency.

A witty, urbane, and sometimes shocking debut novel, set in a hallowed New York museum, in which a co-worker's disappearance and a mysterious map change a life forever Stella Krakus, a curator at Manhattan's renowned Central Museum of Art, is having the roughest week in approximately ever. Her soon-to-be ex-husband (the perfectly awful Whit Ghiscolmbe) is stalking her, a workplace romance with "a fascinating, hyper-rational narcissist" is in freefall, and a beloved colleague, Paul, has gone missing. Strange things are afoot: CeMArt's current exhibit is sponsored by a Belgian multinational that wants to take over the world's water supply, she unwittingly stars in a viral video that's making the rounds, and her mother--the imperious, impossibly glamorous Caro--wants to have lunch. It's almost more than she can overanalyze. But the appearance of a mysterious map, depicting a 19th-century utopian settlement, sends Stella--a dogged expert in American graphics and fluidomanie (don't ask)--on an all-consuming research mission. As she teases out the links between a haunting poem, several unusual novels, a counterfeiting scheme, and one of the museum's colorful early benefactors, she discovers the unbearable secret that Paul's been keeping, and charts a course out of the chaos of her own life. Pulsing with neurotic humor and dagger-sharp prose, Impossible Views of the World is a dazzling debut novel about how to make it through your early thirties with your brain and heart intact.

Consequences of My Indiscretion

Typically, the words "erotic" and "sociopathic" are not used when describing your friends; however, in the T4B postal code district, these words are socially acceptable and are the words Tyrha Delrae uses to describe the group of people she considered her friends. Tyrha's innocence was abruptly stolen upon her entrance into the group as she was thrown into a new way of living; where only the sexually elite survive. It was period of her life, where she was used and abused by her friends, and she herself, used and abused them for her own personal gains. Now that Tyrha has found an escaped and barely survived this world of pain and sadistic torture she was engulfed in for the past five years, she is ready to reveal the eye opening and stomach wrenching events and relationships between her and her friends. Lying, infidelity, and betrayal are just a few of the liabilities that she and her friends have been exposed to and participated in as a direct result of the environment they had grown up in. Consequences of my Indiscretion provides a chilling look into how we are shaped by our environments and that it takes a strong person to leave a situation or a surrounding that they perceive to be normal.

Humorous Texts

This book presents a theory of long humorous texts based on a revision and an upgrade of the General Theory of Verbal Humour (GTVH), a decade after its first proposal. The theory is informed by current research in psycholinguistics and cognitive science. It is predicated on the fact that there are humorous mechanisms in long texts that have no counterpart in jokes. The book includes a number of case studies, among them Oscar Wilde's Lord Arthur Savile's Crime and Allais' story Han Rybeck. A ground-breaking discussion of the quantitative distribution of humor in select texts is presented.

Miscellaneous Aphorisms

The seventeenth-century poet and divine Thomas Traherne finds innocence in every stage of existence. He finds it in the chaos at the origins of creation as well as in the blessed order of Eden. He finds it in the activities of grace and the hope of glory, but also in the trials of misery and even in the abyss of the Fall. Boundless Innocence in Thomas Traherne's Poetic Theology traces innocence through Traherne's works as it transgresses the boundaries of the estates of the soul. Using grammatical and literary categories it explores various aspects of his poetic theology of innocence, uncovering the boundless desire which is embodied in the yearning cry: 'Were all Men Wise and Innocent...' Recovering and reinterpreting a key but increasingly neglected theme in Traherne's poetic theology, this book addresses fundamental misconceptions of the meaning of innocence in his work. Through a contextual and theological approach, it indicates the unexplored richness, complexity and diversity of this theme in the history of literature and theology.

Indiscretion

The author of the acclaimed *Indiscretion* returns with a searing tale of love, passion, and obsession—the story of one man's all-consuming desire for a beautiful, bewitching, and elusive woman. "At night she is often in my dreams, always just out of reach, across a table, laughing, climbing a stair, disappearing into the next room, or on the verge of love, until something causes me to wake up unconsummated, aware of her continued absence in my life even if she was still with me every day. I remember when I first met her. It changed my life." Since he was a shy, protected young man, Wylie Rose has been drawn to the alluring, unconventional Bonet siblings, the children of a bohemian Spanish painter and an American heiress. But none affects him more than the enchanting Cesca, a girl of shimmering, incandescent beauty with a wild, irrepressible spirit. Wylie's friendship with her brother Aurelio, a budding painter of singular talent, brings him near Cesca's circle. A young woman confident in her charms, Cesca is amused by Wylie's youthful sensuality and trusting innocence. Toying with his devotion, she draws him closer to her fire—ultimately ruining him for any other woman. Wylie goes willingly whenever Cesca so tantalizingly reappears in his life, despite the emotional chaos left in her wake. Long ago, Wylie's father warned him about the Bonets. "They're beautiful, talented, rich. It's all very seductive. But they'll take everything and give nothing in return." One day Wylie will make an unexpected choice—a decision that will haunt him and echo through their lives. Spanning several decades, moving through the worlds of high society and art, and peopled with poignant characters, *Girl in the Moonlight* takes us from the wooded cottages of the Hamptons to the dining rooms of Upper East Side Manhattan to the glamorous nightlife of Paris and Barcelona. As he vividly brings to life Wylie and Cesca's tempestuous, heart-wrenching affair, Charles Dubow probes the devastating depths of misguided passion and the nature of true love.

Mary Ellis, Or, The Runaway Match

Aspiring to be a murderer was never what Christian Armond envisioned to be when she grew up. But when Shelby Foster, her boss and rival for the affections of Kevon Roscoe, the company's auditor, was killed after Christian's wrongful termination as her secretary at Foster Cosmetics, Christian was named prime suspect. To prove her innocence, Christian slipped back into Foster's disguised as a temp, aka Devlin Monroe. She inadvertently stumbled across the real killer and the discovery nearly cost her her life. Initially, Christian denied having any interest in wanting a relationship with Kevon Roscoe. The near death experience made Christian realize that she did have feelings for the handsome auditor. She hoped it wasn't too late to explore those feelings with him, to see what can become of them. Also, buoyed by the fact that she actually solved a murder case, albeit accidentally, she decided to make a crazy career move and create a successful business at amateur snooping. She founded an online investigative service operated totally under anonymity and named it ICU, Inc. His Fatal Indiscretion was Christian's very first case. Mrs. Allison Bingham hired ICU, Inc. to find proof that her husband Marc was having an affair. Girl in the Moonlight

This is a revised version of the book which was privately published by the author in 1982. At the time, the book was widely welcomed by Shakespearean scholars as a trenchant, scholarly and highly original contribution to the field of Shakespearean studies. The book's argument is that a full response to Shakespearean tragedy has to take account of the fate of the victims as well as of the tragic heroes and this thesis is illustrated and developed by a consideration of Lavinia, Lucrece and the children in Richard III, Macbeth and King John; and to the three principal Shakespearean tragic victims, Ophelia, Desdemona and Cordelia.

a dangerous spy and traitor, Noel has taken on the persona of the legendary Saint of Seven Dials. When he meets Miss Riverstone, he is first distracted, then fascinated, for she is clearly more than she appears on the surface—but what? In the two centuries between the first performance of *The School for Scandal* by Richard Brinsley Sheridan and the outbreak of the First World War, the stage provided an accurate mirror of the changing mores of English society. "High comedy," Newell W. Sawyer writes, "views man as a social animal in the midst of his fellows, with customs, conventions, and traditions of his own devising, and prods him gently or mockingly, as he stands confounded by that which he has made." The comedy of manners became, from its prototype, a dramatic category reflecting the life, thought, and manners of upper-class society, faithful to its traditions and philosophy, and as such offers an ideal medium for such a study as Professor Sawyer has here undertaken. The result is a book that is at once entertaining and serious, a study of two centuries of the British stage,

His Fatal Indiscretion

LORD ARTHUR SAVILE'S CRIME CHAPTER I It was Lady Windermere's last reception before Easter, and Bentinck House was even more crowded than usual. Six Cabinet Ministers had come on from the Speaker's Levee in their stars and ribands, all the pretty women wore their smartest dresses, and at the end of the picture-gallery stood the Princess Sophia of Carlsruhe, a heavy Tartar-looking lady, with tiny black eyes and wonderful emeralds, talking bad French at the top of her voice, and laughing immoderately at everything that was said to her. It was certainly a wonderful medley of people. Gorgeous peeresses chatted affably to violent Radicals, popular preachers brushed coat-tails with eminent sceptics, a perfect bevy of bishops kept following a stout prima-donna from room to room, on the staircase stood several Royal Academicians, disguised as artists, and it was said that at one time the supper-room was absolutely crammed with geniuses. In fact, it was one of Lady Windermere's best nights, and the Princess stayed till nearly half-past eleven. As soon as she had gone, Lady Windermere returned to the picture-gallery, where a celebrated political economist was solemnly explaining the scientific theory of music to an indignant virtuoso from Hungary, and began to talk to the Duchess of Paisley. She looked wonderfully beautiful with her grand ivory throat, her large blue forget-me-not eyes, and her heavy coils of golden hair. OR PUR they were - not that pale straw colour that nowadays usurps the gracious name of gold, but such gold as is woven into sunbeams or hidden in strange amber; and they gave to her face something of the frame of a saint, with not a little of the fascination of a sinner. She was a curious psychological study. Early in life she had discovered the important truth that nothing looks so like innocence as an indiscretion; and by a series of reckless escapades, half of them quite harmless, she had acquired all the privileges of a personality. She had more than once changed her husband; indeed, Debrett credits her with three marriages; but as she had never changed her lover, the world had long ago ceased to talk scandal about her. She was now forty years of age, childless, and with that inordinate passion for pleasure which is the secret of remaining young. Suddenly she looked eagerly round the room, and said, in her clear contralto voice, 'Where is my cheiromantist?' 'Your what, Gladys?' exclaimed the Duchess, giving an involuntary start. 'My cheiromantist, Duchess; I can't live without him at present.' 'Dear Gladys! you are always so original,' murmured the Duchess, trying to remember what a cheiromantist really was, and hoping it was not the same as a cheiropodist. 'He comes to see my hand twice a week regularly,' continued Lady Windermere, 'and is most interesting about it.' 'Good heavens!' said the Duchess to herself, 'he is a sort of cheiropodist after all. How very dreadful. I hope he is a foreigner at any rate. It wouldn't be quite so bad then.' 'I must certainly introduce him to you.'

Innocent Passions

At last! Here is a clear, concise, and highly readable explanation of how to write your family history. This book was written for the genealogist who has compiled scores of pedigree charts and family group sheets, has spent years poring over forgotten manuscripts and staring into dimly-lit microfilm readers, and who now wants to bring it all together into a final narrative form. In a timely and interesting manner, the author shows how you can compose a controlled and focused rendition of your family's story.

The Party's Over

The world is about to run out of cheap oil and change dramatically. Within the next few years, global production will peak. Thereafter, even if industrial societies begin to switch to alternative energy sources, they will have less net energy each year to do all the work essential to the survival of complex societies. We are entering a new era, as different from the industrial era as the latter was from medieval times. In *The Party's Over*, Richard Heinberg places this momentous transition in historical context, showing how industrialism arose from the harnessing of fossil fuels, how competition to control access to oil shaped the geopolitics of the 20th century, and how contention for dwindling energy resources in the 21st century will lead to resource wars in the Middle East, Central Asia, and South America. He describes the likely impacts of oil depletion, and all of the energy alternatives. Predicting chaos unless the U.S. -- the world's foremost oil consumer -- is willing to join with other countries to implement a global program of resource conservation and sharing, he also recommends a "managed collapse" that might make way for a slower-paced, low-energy, sustainable society in the future. More readable than other accounts of this issue, with fuller discussion of the context, social implications, and recommendations for personal, community, national, and global action, Heinberg's updated book is a riveting wake-up call for humankind as the oil era winds down, and a critical tool for understanding and influencing current U.S. foreign policy. The Party's Over

An updated edition of this bestselling book on the end of oil -- and its consequences.

The Party's Over

February 1, 2003 *The Party's Over* (TPO) is an excellently and thoroughly researched treatment of precisely the oil depletion problem, almost entirely free of the usual hidden political agendas, irrelevant personal memoirs, and philosophical delusions. I would recommend TPO to anybody on this list . . . as a convenient and politically neutral "Pack-'O-Facts" that can be offered to friends, family, colleagues, policy makers, and anybody else in your life or world that you may feel needs a sober sit-down and some rational talking-to about the energy future of industrial civilization. The Endnotes section at the book's end, organized by chapter, is the best bibliography I've ever seen on all aspects of the topic. This book bears direct comparison to only three other more-or-less mass or general market books that I'm aware of: Thom Hartmann, *Last Hours of Ancient Sunlight*; Jeremy Rifkin, *The Hydrogen Economy*; Kenneth Deffeyes, *Hubbert's Peak: The Impending World Oil Shortage*. With respect to these, I feel that TPO is: less irrelevantly philosophical than Hartmann's book, more up- to-date, and more pointedly technical in sources used. very similar to the first half of Rifkin's work, where he delineates the problem, but again a more comprehensive and at the same time more focused presentation. The second half of Rifkin's work, where he cheerleads in rather political mode for a salvaging of the world's economy via distributed hydrogen/fuel-cell infrastructure is not directly relevant, except I suppose inasmuch as it would seem to contradict Heinberg's skepticism about propping up global industrial civilization through a 11th hour switch to alternatives. I'd personally go with Heinberg's conclusions. again, in topic/coverage very similar to Deffeye's quite interesting work, but frankly for those who want a quick and focused rollup presentation/package for opening the topic with others, Deffeye's work is overly encumbered with too much aranca about oil geology and personal author's memoirs. Overall, *The Party's Over* will serve as the state-of-the-art topic-opener on Hubbert catastrophism, for people on this list, well into the foreseeable future. Scott Meredith AlasBabylon list owner

Manifesto for the Earth

Argues that the international community needs to scrutinize structural factors, such as nationalism and consumerism, which are inhibiting sustainable development.

Climate Change and Society

This book explores the significance of human behaviour to understanding the causes and impacts of changing climates and to assessing varied ways of responding to such changes. So far the discipline that has represented and modelled such human behaviour is economics. By contrast *Climate Change*

and Society tries to place the 'social' at the heart of both the analysis of climates and of the assessment of alternative futures. It demonstrates the importance of social practices organised into systems. In the fateful twentieth century various interlocking high carbon systems were established. This sedimented high carbon social practices, engendering huge population growth, increasing greenhouse gas emissions and the potentially declining availability of oil that made this world go round. Especially important in stabilising this pattern was the 'carbon military-industrial complex' around the world. The book goes on to examine how in this new century it is systems that have to change, to move from growing high carbon systems to those that are low carbon. Many suggestions are made as to how to innovate such low carbon systems. It is shown that such a transition has to happen fast so as to create positive feedbacks of each low carbon system upon each other. Various scenarios are elaborated of differing futures for the middle of this century, futures that all contain significant costs for the scale, extent and richness of social life. Climate Change and Society thus attempts to replace economics with sociology as the dominant discipline in climate change analysis. Sociology has spent much time examining the nature of modern societies, of modernity, but mostly failed to analyse the carbon resource base of such societies. This book seeks to remedy that failing. It should appeal to teachers and students in sociology, economics, environmental studies, geography, planning, politics and science studies, as well as to the public concerned with the long term future of carbon and society.

Shocking the Suburbs

Petrol prices have risen to historic highs, disrupting western economies and stretching household budgets. Australia's overwhelming reliance on the private motor car for urban mobility makes our cities among the most oil-dependent in the world, and to date there has been little analysis of the potential social, economic and political impacts of rising fuel costs on our cities. Shocking the Suburbs considers current urban transport problems, and identifies how new planning strategies and broader public policy can address oil vulnerability.

The Coming Oil Storm

Ron Rhodes, a leading scholar on biblical prophecy, reveals how looming tensions over oil factor into end-time global alignments and how they may lead to a dramatic shift in the balance of power in the world. Much of the world's oil is in the custody of unstable and sometimes hostile regimes. Nations around the world are positioning themselves to protect their shrinking piece of the pie of dwindling oil reserves. Global tensions continue to rise. In The Coming Oil Storm Rhodes documents the role of Islam as the religion in control of most of the world's oil reserves and shows convincingly that once Muslims are in possession of the two swords of oil and nuclear weapons, they will feel empowered to act as they wish. Oil could even play a role in the path to Armageddon. The Coming Oil Storm is an essential guide for understanding the state of the world today...and what's yet to come.

When Technology Fails

There's never been a better time to "be prepared." Matthew Stein's comprehensive primer on sustainable living skills—from food and water to shelter and energy to first-aid and crisis-management skills—prepares you to embark on the path toward sustainability. But unlike any other book, Stein not only shows you how to live "green" in seemingly stable times, but to live in the face of potential disasters, lasting days or years, coming in the form of social upheaval, economic meltdown, or environmental catastrophe. When Technology Fails covers the gamut. You'll learn how to start a fire and keep warm if you've been left temporarily homeless, as well as the basics of installing a renewable energy system for your home or business. You'll learn how to find and sterilize water in the face of utility failure, as well as practical information for dealing with water-quality issues even when the public tap water is still flowing. You'll learn alternative techniques for healing equally suited to an era of profit-driven malpractice as to situations of social calamity. Each chapter (a survey of the risks to the status quo; supplies and preparation for short- and long-term emergencies; emergency measures for survival; water; food; shelter; clothing; first aid, low-tech medicine, and healing; energy, heat, and power; metalworking; utensils and storage; low-tech chemistry; and engineering, machines, and materials) offers the same approach, describing skills for self-reliance in good times and bad. Fully revised and expanded—the first edition was written pre-9/11 and pre-Katrina, when few Americans took the risk of social disruption seriously—When Technology Fails ends on a positive, proactive note with a new chapter on "Making the Shift to Sustainability," which offers practical suggestions for changing our world on personal, community and global levels.

Surviving the Future

Surviving the Future is a story drawn from the fertile ground of the late David Fleming's extraordinary *Lean Logic: A Dictionary for the Future and How to Survive It*. That hardback consists of four hundred and four interlinked dictionary entries, inviting readers to choose their own path through its radical vision. Recognizing that *Lean Logic's* sheer size and unusual structure can be daunting, Fleming's long-time collaborator Shaun Chamberlin has selected and edited one of these potential narratives to create *Surviving the Future*. The content, rare insights, and uniquely enjoyable writing style remain Fleming's, but are presented here at a more accessible paperback-length and in conventional read-it-front-to-back format. The subtitle--*Culture, Carnival and Capital in the Aftermath of the Market Economy*--hints at Fleming's vision. He believed that the market economy will not survive its inherent flaws beyond the early decades of this century, and that its failure will bring great challenges, but he did not dwell on this: "We know what we need to do. We need to build the sequel, to draw on inspiration which has lain dormant, like the seed beneath the snow." *Surviving the Future* lays out a compelling and powerfully different new economics for a post-growth world. One that relies not on taut competitiveness and eternally increasing productivity--"putting the grim into reality"--but on the play, humor, conversation, and reciprocal obligations of a rich culture. Building on a remarkable breadth of intellectual and cultural heritage--from Keynes to Kumar, Homer to Huxley, Mumford to MacIntyre, Scruton to Shiva, Shakespeare to Schumacher--Fleming describes a world in which, as he says, "there will be time for music." This is the world that many of us want to live in, yet we are told it is idealistic and unrealistic. With an evident mastery of both economic theory and historical precedent, Fleming shows that it is not only desirable, but actually the only system with a realistic claim to longevity. With friendliness, humor, and charm, *Surviving the Future* plucks this vision out of our daydreams and shows us how to make it real.

Accumulations, Crises, Struggles

This is a book about capitalism. To be more specific, it is about the most recent phase or stage of capitalist development, that is, neoliberal globalization. Neoliberalism, as much a political project as an economic one, is still pervasive, and it continues to provide the general framework for politics and political imagination across most of the globe. This volume brings together a group of valuable scholars from different parts of the world looking at the impact of neoliberalism on our societies. And, as such, it aspires to contribute as much to the critique and overcoming of this process as to its analysis. With its extensive coverage, both geographically and thematically, this book will be of interest for students of the social sciences as well as for anyone who makes an effort to understand and change the world in which she lives. Crude

Crude is the unexpurgated story of oil, from the circumstances of its birth millions of years ago to the spectacle of its rise as the indispensable ingredient of modern life. In addition to fueling our SUVs and illuminating our cities, crude oil and its byproducts fertilize our produce, pave our roads, and make plastic possible. "Newborn babies," observes author Sonia Shah, "slide from their mothers into petro-plastic-gloved hands, are swaddled in petro-polyester blankets, and are hurried off to be warmed by oil-burning heaters." The modern world is drenched in oil; *Crude* tells how it came to be. A great human drama emerges, of discovery and innovation, risk, the promise of riches, and the power of greed. Shah infuses recent twists in the story with equal drama, through chronicles of colorful modern-day characters — from the hundreds of Nigerian women who stormed a Chevron plant to a monomaniacal scientist for whom life is the pursuit of this earthblood and its elusive secret. Shah moves masterfully between scientific, economic, political, and social analysis, capturing the many sides of the indispensable mineral that we someday may have to find a way to live without.

The Politics of Energy

This book brings together leading scholars on the politics of energy, examining the natural resources and developing technologies that are essential to its production and the various public and private factors affecting its use, along with the ecological consequences of both. Section One examines the looming challenges posed by continuing dependence upon oil as a primary energy source, including "peak oil" scenarios and the social and political consequences of resource extraction upon the developing world. Section Two considers proposals to dramatically increase nuclear power production as a means to reduce carbon emissions, with both the risks and potential of this "nuclear option" carefully

weighed. Although many tout renewable energy sources for their environmental benefits, Section Three calls attention to several potential problems with large-scale renewable energy development and the dilemmas that they have caused for would-be supporters of such efforts. Finally, Section Four weighs the prospects for developing sustainable energy systems on the ground, including conservation measures that reduce energy demand and system-wide energy policy efforts. Together, these essays demonstrate the importance of sound energy policy along with the numerous obstacles to developing and implementing it. This book was originally published as a special issue of *Environmental Politics*.

The Oxford Handbook of Food, Politics, and Society

This volume explores the complex interrelationships between food and agriculture, politics, and society. More specifically, it considers the political aspects of three basic economic questions : what is to be produced? how is it to be produced? how it is to be distributed? It also outlines three unifying themes running through the politics of answering these societal questions with regard to food, namely : ecology, technology and property

Reconstructing Value

Reconstructing Value prepares contemporary business leaders for the increasingly important task of developing a sustainability vision and translating it across levels in an organization. The book is based on insights gained over the past decade from research involving hundreds of practitioners, front line managers to senior executives, who have been working to integrate sustainability within their organizations. It illustrates how building capacity for managing the complex issues of sustainability requires key process skills that leaders need to develop. This book equips readers to respond to the risks and opportunities presented by global sustainability issues and reinvent new ways of doing business that will enhance organizational effectiveness while also building a more sustainable world. Each chapter includes process questions to guide reflective practice and to build the requisite leadership capabilities for turning a sustainability vision into a value-added organizational strategy. Reconstructing Value helps readers to build integrative thinking skills – such as how to engage critical, complexity, strategic and design thinking capabilities to enable organizational change – that can assist them with becoming successful sustainability champions within their organizations.

Powerdown

If the US continues with current policies, the next decades will be marked by war, economic collapse, and environmental catastrophe. Resource depletion and population pressures are about to catch up with us, and no one is prepared. The political élites, especially in the US, are incapable of dealing with the situation, and have in mind a punishing game of "Last One Standing." The alternative is "Powerdown," a strategy that will require tremendous effort and economic sacrifice in order to reduce per-capita resource usage in wealthy countries, develop alternative energy sources, distribute resources more equitably, and reduce the human population humanely but systematically over time. While civil society organizations push for a mild version of this, the vast majority of the world's people are in the dark, not understanding the challenges ahead, nor the options realistically available. Powerdown speaks frankly to these dilemmas. Avoiding cynicism and despair, it begins with an overview of the likely impacts of oil and natural gas depletion and then outlines four options for industrial societies during the next decades: Last One Standing: the path of competition for remaining resources; Powerdown: the path of cooperation, conservation, and sharing; Waiting for a Magic Elixir: wishful thinking, false hopes, and denial; Building Lifeboats: the path of community solidarity and preservation. Finally, the book explores how three important groups within global society - the power élites, the opposition to the élites (the antiwar and anti-globalization movements, et al: the "Other Superpower"), and ordinary people - are likely to respond to these four options. Timely, accessible and eloquent, Powerdown is crucial reading for our times. Listen to an interview with Richard Heinberg from WRPI.

The Scottish Economy and Nationalism

Scotland's economic capacity to prosper independently of Britain has become a key political issue, dominating the independence referendum of 2014 and continuing to influence British politics since. But, as this book shows, the Scottish economy is not merely a statistical object – it is also a political, sociological and cultural idea which has been imagined and constructed. The book explores the history of how Scotland has been framed in statistical and policy terms, which are laden with conflicts over meaning, ranging from class struggles and struggles against "external control" to the ongoing debate

over national independence. Using Scotland as a case study for examining the political meaning of "the economy"

Routledge Handbook of Climate Change and Society

As the time-scales of natural change accelerate and converge with those of society, Routledge Handbook of Climate Change and Society takes the reader into largely uncharted territory in its exploration of anthropogenic climate change. Current material is used to highlight the global impact of this issue, and the necessity for multidisciplinary and global social science research and teaching to address the problem. The book is multidisciplinary and worldwide in scope, with contributors spanning specialisms including agro-forestry, economics, environmentalism, ethics, human geography, international relations, law, politics, psychology, sociology and theology. Their global knowledge is reflected in the content of the text, which encompasses chapters on American, European and Chinese policies, case studies of responses to disasters and of the new technological and lifestyle alternatives that are being adopted, and the negotiations leading up to the Copenhagen conference alongside a preface assessing its outcomes. Starting with an initial analysis by a leading climatologist, key issues discussed in the text include recent findings of natural scientists, social causation and vulnerability, media and public recognition or scepticism, and the merits and difficulties of actions seeking to mitigate and adapt. This accessible volume utilizes a wealth of case studies, explains technical terms and minimises the use of acronyms associated with the subject, making it an essential text for advanced undergraduates, postgraduate students and researchers in the social sciences.

The Hydrogen Society

Erhaps even more attractive is the idea to use the sun's heat for splitting water into hydrogen and oxygen and storing them in two separate vessels. The high temperature produced by recombining oxygen and hydrogen is known to be the most intense heat available to mankind. Moreover, one could use the hydrogen for lighting, and inexpensively produced oxygen would also close a longstanding gap. But how can one use the sun's energy to split water? In my opinion, thermopiles, which have already accomplished excellent performance, could solve this problem ..."--The Back Cover.

The Next Economics

The Next Economics focuses on how the field of economics must change and incorporate environment, energy, health and new technologies that are called externalities for stopping and reversing climate change. The field of economics needs to become a science. Economics in this book for the Green Industrial Revolution which goes beyond the third industrial revolution since it covers cases, examples and specific economic analyses that both scientific and global. The book concerns climate change and how the Economics for Externalities, needs to range from energy and national security to infrastructure and communities. Solutions and cases of the "Next Economics" are based in western philosophical economic paradigms and how that is changing due to the significance of current global economic and societal concerns. Finally practical applications for economics are explored using global environmental and energy issues. Areas that need a fresh look at and be integrated with economics, include the environment, social and political issues, energy, health climate change and their infrastructures, as they are major components of the macroeconomics for the future. Based on past economic models, these subjects have been lost or ill fitted into modern economic theory. The challenge is to explore and to look deeply into economics in order to provide it a new direction with the possibility for understanding, changing and saving the planet from climate change. This book presents to economists and policy-makers alike areas of environmental economics, energy policy, health and social issues which are needed to stop and reverse climate change.

Media on the Move

Media on the Move provides a critical analysis of the dynamics of the international flow of images and ideas. This comes at a time when the political, economic and technological contexts within which media organisations operate are becoming increasingly global. The surge in transnational traffic in media products has primarily benefited the major corporations such as Disney, AOL, Time Warner and News Corporation. However, as this book argues, new networks have emerged which buck this trend: Brazilian TV is watched in China, Indian films have a huge following in the Arab world and Al Jazeera has become a household name in the West. Combining a theoretical perspective on contra-flow of media with grounded case studies into one up-to-date and accessible volume, Media on the Move provides a much-needed guide to the globalization of media, going beyond the standard Anglo-American view of this evolving phenomenon.

Radical Transformation

“Radical Transformation is a tour de force.”— Thomas Homer-Dixon, author of *The Upside of Down: Catastrophe, Creativity and the Renewal of Civilization* Radical Transformation is a story about industrial civilization's impending collapse, and about the possibilities of averting this fate. Human communities first emerged as egalitarian, democratic groups that existed in symbiotic relationship with their environments. Increasing complexity led to the emergence of oligarchy, in which societies became captive to the logic of domination, exploitation, and ecological destruction. The challenge facing us today is to build a movement that will radically transform civilization and once more align our evolutionary trajectory in the direction of democracy, equality, and ecological sustainability.

The Rise of China and the Demise of the Capitalist World Economy

In recent years, China has become a major actor in the global economy, making a remarkable switch from a planned and egalitarian socialism to a simultaneously wide-open and tightly controlled market economy. Against the establishment wisdom, Mingqi Li argues in this provocative and startling book that far from strengthening capitalism, China's full integration into the world capitalist system will, in fact and in the not too distant future, bring about its demise. The author tells us that historically the spread and growth of capitalist economies has required low wages, taxation, and environmental costs, as well as a hegemonic nation to prevent international competition from eroding these requirements. With the decline of the economic power of the United States, its current hegemonic role will deteriorate and the unprecedented growth of China will so erode the foundations of capital accumulation—by pushing wages and environmental costs up, for example—that the entire capitalist system will be shaken to its core. This is essential reading for those who still believe that there is no alternative.

The End of Ethics in a Technological Society

This book offers a bold challenge to modern liberal ethics by exposing its inability to confront the inexorable advance of technology. Contemporary books on technology generally fall into three categories: those that offer optimist projections of a glorious future, those that provide radical critiques of specific techniques, and those that express alarm about the dehumanizing effects of a culture dominated by technology. *The End of Ethics in a Technological Society* offers a deeper assessment of the modern West's commitment to technological progress. It argues that modern technology, ethics, and politics are all expressions of the enlightenment view that there are no principles of truth or goodness higher than the free human will. Technological advances are, on this view, merely extensions of the range of human freedom. Modern ethics thus fails to give voice to our often inchoate moral intuition that, in the realm of techno science, some possibilities simply ought not to be pursued. The authors develop their challenge by examining typical ethical approaches to such urgent contemporary concerns as environmental degradation, nuclear energy, high tech militarism, and fetal genetic testing. They relate our social crises to the transformation of ethics that has taken place as technology has become the house in which we all live.

Future Tourism

The book draws on the views of leading thinkers in Tourism and considers a broad range of issues from multidisciplinary perspectives facing Tourism industry for the first time in one volume: dwindling energy, new technology, security (like war and terrorism), political economy, sustainability, and human resources. By critically reviewing these social and economic challenges in a global scale, the book

helps to create a comprehensive view of future tourism in the unfolding and challenging society of the third millennium.

A Future Beyond Growth

There is a fundamental denial at the centre of why we have an environmental crisis – a denial that ignores that endless physical growth on a finite planet is impossible. Nature provides the ecosystem services that support our civilisation, thus making humanity unavoidably dependent upon it. However, society continues to ignore and deny this dependence. *A Future Beyond Growth* explores the reason why the endless growth economy is fundamentally unsustainable and considers ways in which society can move beyond this to a steady state economy. The book brings together some of the deepest thinkers from around the world to consider how to advance beyond growth. The main themes consider the deep problems of the current system and key aspects of a steady state economy, such as population; throughput and consumerism; ethics and equity; and policy for change. The policy section and conclusion bring together these various themes and indicates how we can move past the growth economy to a truly sustainable future. This volume will be of great interest to students and scholars of economics, sustainability and environmental studies in general.

Anthropology and Climate Change

The first edition of *Anthropology and Climate Change* (2009) pioneered the study of climate change through the lens of anthropology, covering the relation between human cultures and the environment from prehistoric times to the present. This second, heavily revised edition brings the material on this rapidly changing field completely up to date, with major scholars from around the world mapping out trajectories of research and issuing specific calls for action. The new edition introduces new “foundational” chapters—laying out what anthropologists know about climate change today, new theoretical and practical perspectives, insights gleaned from sociology, and international efforts to study and curb climate change—making the volume a perfect introductory textbook; presents a series of case studies—both new case studies and old ones updated and viewed with fresh eyes—with the specific purpose of assessing climate trends; provides a close look at how climate change is affecting livelihoods, especially in the context of economic globalization and the migration of youth from rural to urban areas; expands coverage to England, the Amazon, the Marshall Islands, Tanzania, and Ethiopia; re-examines the conclusions and recommendations of the first volume, refining our knowledge of what we do and do not know about climate change and what we can do to adapt.

The Hydrogen Age

"Hydrogen linked with clean, renewable sources of energy provides the prescription for the ills of an ailing planet. Geoffrey B. Holland and James J. Provencano's hallmark book 'The hydrogen age' details just how this remarkable energy carrier has been vital to the workings of the universe since the beginning of time, and why it is now ready to play a central part in healing our Earth, our atmosphere, and the world's economies as a clean-energy commodity." - book jacket.

Energy Supply

Provides an overview of issues related to energy supply, distribution, and use, including history, terminology, biographical information on important individuals, and a complete annotated bibliography.

Natural Resources and Government Revenue: Recent Trends in Saskatchewan

Since the expansion of democracy, and the election of the CCF Government in 1944, the people of Saskatchewan have consistently felt that natural resources should be developed for the benefit of all. [...] In Canada today, and in many other countries, economic rent from resource extraction and use is considered to be the difference between the basic international price of a commodity less all the costs of production - including exploration, development of the extraction process, operating the system, the capital invested and the transportation costs. [...] Economic rent under this definition would include the excess profits captured by the corporations, as well as the special taxes, fees and royalties, which are used by governments to try to appropriate a share of the rent for the general public - the legal owners of the natural resources. [...] The theory is that the private company responsible for the extraction owes royalties to the owners of the resource, the general public, and this should be considered a basic cost of production. [...] For example, in 2004-5 there was a major increase in the price of oil and natural gas

unrelated to the cost of extraction, and the monopoly rent was captured by the private corporations and their owners.

International Handbook on Transport and Development

In the last forty years or so the research field exploring the relationship and interaction between transport and development has developed rapidly. While sophistication in analysis has increased, understanding the effective integration of transport and development often remains poor in theory and in practice - with sometimes devastating effects. This Handbook provides a comprehensive analysis of both the current and emerging thinking in this field, drawing on multidisciplinary thinking in transport planning, transport, urban and spatial economics, and the wider social sciences. With 45 chapters from leading international authors, the book is organised around three main themes: urban structure and travel; transport and spatial impacts; wider dimensions in transport and development. The chapters each present commentary on key issues within these themes, presenting the debate on the impacts of urban structure on travel, the impacts of transport investment on development, and social and cultural change on travel. A multitude of competing inter-disciplinary perspectives are considered - leaving the reader with an invaluable comprehensive and critical understanding of the field. This major Handbook will serve as a guide for undergraduates and graduate students, researchers, consultants, and also practitioners and policy makers, wishing to find a comprehensive and original reference to research on transport and development.

The Routledge Companion to the Environmental Humanities

The Routledge Companion to the Environmental Humanities provides a comprehensive, transnational, and interdisciplinary map to the field, offering a broad overview of its founding principles while providing insight into exciting new directions for future scholarship. Articulating the significance of humanistic perspectives for our collective social engagement with ecological crises, the volume explores the potential of the environmental humanities for organizing humanistic research, opening up new forms of interdisciplinarity, and shaping public debate and policies on environmental issues. Sections cover: The Anthropocene and the Domestication of Earth Posthumanism and Multispecies Communities Inequality and Environmental Justice Decline and Resilience: Environmental Narratives, History, and Memory Environmental Arts, Media, and Technologies The State of the Environmental Humanities The first of its kind, this companion covers essential issues and themes, necessarily crossing disciplines within the humanities and with the social and natural sciences. Exploring how the environmental humanities contribute to policy and action concerning some of the key intellectual, social, and environmental challenges of our times, the chapters offer an ideal guide to this rapidly developing field.

Sustainability

From one of the world's leading experts on the subject, a fully updated introduction to the sustainability movement from the 1600s to today The word is nearly ubiquitous: at the grocery store we shop for "sustainable foods" that were produced from "sustainable agriculture"; groups ranging from small advocacy organizations to city and state governments to the United Nations tout "sustainable development" as a strategy for local and global stability; and woe betide the city-dweller who doesn't aim for a "sustainable lifestyle." Seeming to have come out of nowhere to dominate the discussion-from permaculture to renewable energy to the local food movement-the ideas that underlie and define sustainability can be traced back several centuries. In this illuminating and fascinating primer, newly revised and updated, Jeremy L. Caradonna does just that, approaching sustainability from a historical perspective and revealing the conditions that gave it shape. Locating the underpinnings of the movement as far back as the 1660s, Caradonna considers the origins of sustainability across many fields throughout Europe and North America. Taking us from the emergence of thoughts guiding sustainable yield forestry in the late 17th and 18th centuries, through the challenges of the Industrial Revolution, the birth of the environmental movement, and the emergence of a concrete effort to promote a balanced approach to development in the latter half of the 20th century, he shows that while sustainability draws upon ideas of social justice, ecological economics, and environmental conservation, it is more than the sum of its parts and blends these ideas together into a dynamic philosophy. Caradonna's book broadens our understanding of what "sustainability" means, revealing how it progressed from a relatively marginal concept to an ideal that shapes everything from individual lifestyles, government and corporate strategies, and even national and international policy. For anyone seeking understand the history of those striving to make the world a better place to live, here's a place to start.

Transitions

Formidable challenges confront Australia and its human settlements: the mega-metro regions, major and provincial cities, coastal, rural and remote towns. The key drivers of change and major urban vulnerabilities have been identified and principal among them are resource-constraints, such as oil, water, food, skilled labour and materials, and carbon-constraints, linked to climate change and a need to transition to renewable energy, both of which will strongly shape urban development this century. Transitions identifies 21st century challenges to the resilience of Australia's cities and regions that flow from a range of global and local influences, and offers a portfolio of solutions to these critical problems and vulnerabilities. The solutions will require fundamental transitions in many instances: to our urban infrastructures, to our institutions and how they plan for the future, and perhaps most of all to ourselves in terms of our lifestyles and consumption patterns. With contributions from 92 researchers - all leaders in their respective fields - this book offers the expertise to chart pathways for a sustainability transition.

The Wetlands Handbook, 2 Volume Set

Forty-two chapters by international experts from a wide range of disciplines make The Wetlands Handbook the essential tool for those seeking comprehensive understanding of the subject. A departure from more traditional treatises, this text examines freshwater wetland ecosystem science from the fundamentals to issues of management and policy. Introductory chapters address the scope and significance of wetlands globally for communities, culture and biodiversity. Subsequent sections deal with processes underpinning wetland functioning, how wetlands work, their uses and values for humans and nature, their sensitivity to external impacts, and how they may be restored. The text is illustrated by numerous examples, emphasising functional and holistic approaches to wetland management, including case studies on the wise use and rehabilitation of wetlands in farmed, urban, industrial and other damaged environments, highlighting the long-term benefits of multiple use. The Wetlands Handbook will provide an invaluable reference for researchers, managers, policy-makers and students of wetland sciences.

Beyond Atheism, Beyond God

In his new study, *Beyond Atheism, Beyond God*, author Philip A. Stahl uses atheism as a rational stepping stone to arrive at an emergent conception of the universe, exposing features that might be described as transcendent. He presents an impersonal approach to Being that is devoid of any specific religious overtones or affiliations. Each person becomes a quantum-based co-creator in his or her own right, according to physicist Henry Stapp. As such, we are able to thereby see ourselves and our humanity in a new light, as opposed to being merely reactive cogs in a vast mechanical-reductionist machine. Effectively, we emerge as much more than assemblies of molecules. This volume, the fourth and final entry in Stahl's series on atheism, seeks to arrive at a transcendent concept of being that also surpasses absolutism and naïve or dogmatic deity templates. It considers the development of a more realistic, cogent and effective ethics and morality less likely to be exploited by the power mongers or sacred source apologists, and it answers the question of whether God exists though not in the way one would normally assume.

Decline and Fall

The political theorist and author of *After Progress* examines the future of U.S. dominance on the world stage in this persuasive and provocative book. The decline and fall of America's global empire is the central feature of today's geopolitical landscape. How we respond to this reality will determine much of our future trajectory, with implications that reach far beyond the limits of one nation's borders. In *Decline and Fall*, John Michael Greer examines the path we're on and presents a persuasive challenge to the conventional wisdom of empire. Rather than asking if today's American empire should survive, Greer asks whether it can—and goes on to demonstrate that the answer is "no." After exploring the inevitable consequences of imperial collapse, *Decline and Fall* proposes a renewal of democratic institutions as the only constructive way forward.

Energy Analysis for a Sustainable Future

This book explains why conventional energy analysis and statistics are not useful for generating robust energy scenarios and effective assessments of the quality of alternative energy sources. Then it presents an innovative multi-scale approach, illustrated with empirical results, for effectively dealing with sustainability in face of the coming energy crisis.

Energy and Empire

Reveals the role played by political and economic elites in the privileging of civilian commercial nuclear energy over other options, such as solar, in the United States after 1945. What set the United States on the path to developing commercial nuclear energy in the 1950s, and what led to the seeming demise of that industry in the late 1970s? Why, in spite of the depletion of fossil fuels and the obvious dangers of global warming, has the United States moved so slowly toward adopting alternatives? In *Energy and Empire*, George A. Gonzalez presents a clear and concise argument demonstrating that economic elites tied their advocacy of the nuclear energy option to post-1945 American foreign policy goals. At the same time, these elites opposed government support for other forms of energy, such as solar, that cannot be dominated by one nation. While researchers have blamed safety concerns and other factors as helping to arrest the expansion of domestic nuclear power plant construction, Gonzalez points to an entirely different set of motivations stemming from the loss of America's domination/control of the enrichment of nuclear fuel. Once foreign countries could enrich their own fuel, civilian nuclear power ceased to be a lever the United States could use to economically/politically dominate other nations. Instead, it became a major concern relating to nuclear weapons proliferation. George A. Gonzalez is Associate Professor of Political Science at the University of Miami. His books include *Urban Sprawl*, *Global Warming*, and *the Empire of Capital*; *The Politics of Air Pollution: Urban Growth, Ecological Modernization, and Symbolic Inclusion*; and *Flashpoints in Environmental Policymaking: Controversies in Achieving Sustainability* (coedited with Sheldon Kamieniecki and Robert O. Vos), all published by SUNY Press.

The Bet

"The Bet uses a legendary wager between the Stanford biologist Paul Ehrlich and the conservative University of Illinois economist Julian Simon to examine the roots of modern environmentalism and its relationship to broader political conflicts in the nation. Ehrlich, author of the landmark 1968 book *The Population Bomb*, believed that rising populations would cause overconsumption, scarcity, and disastrous famines. Simon countered that flexible markets, technological change, and human ingenuity would allow societies to adapt to changing circumstances and continue to improve human welfare. In 1980, they made a much-ballyhooed bet about the future prices of five metals that served as a proxy for their arguments about the future. The Bet weaves intellectual biographies of Ehrlich and Simon into the history of late twentieth-century environmental politics and other struggles of the era between liberals and conservatives. Humanity's larger gamble on the future still remains unresolved. By wrestling with the different sides of these arguments, *The Bet* encourages a more nuanced approach to environmental problems, one that acknowledges the limitations of both ecology and economics in guiding policy, and that instead emphasizes the conflicting values that underlie political choices. The Bet is structured around three bets: first, the \$1000 bet that Ehrlich (and two colleagues) made with Simon over the prices of chromium, copper, nickel, tin, and tungsten; second, the bet that the United States faced in the 1980 presidential election in choosing between Carter and Reagan; and third, the larger gamble that we as a society continue to make as we make choices"--
