1st concept • Alternative versions of genes account for variations in inherited characters • Example: the gene for flower color in peas exists in 2 versions

1 for purple and 1 for white flowers • Alleles are the alternative versions of a gene • Each gene resides at a specific locus on a specific chromosome

If the two alleles at a locus differ, then one (the dominant allele) determines the organism's appearance, and the other the recessive allele has no noticeable effect on appearance - In the flower-color example, the F<sub>1</sub> plants had
