Photography as a Social Research Method

This book focuses on photography within the social research field, building a solid foundation for photography as a social research method and describing different techniques and applications of photo research. It provides a comprehensive approach to research photography, from preparation and the ethical considerations that need to be understood prior to going into the field, to collecting data, analysis and preparing research for publication. It also introduces artistic genres of photography to help readers with the choices they make when pursuing photographic research and as a reminder that when collecting photographs that they are in fact producing art. The ethical issues examined place a new focus on dignity and considerations of participant anonymity and recognition, informed consent, working with vulnerable groups, unequal power relationships and possible intervention. Combining preparation and ethics, it examines how best to collect and take good photographs, and explores the practical issues of stigma and introduces *Verstaendnis* (german: understanding) to aid researchers in the field. Subsequently, the book discusses the different photo-analytical approaches for researchers and provides examples of how to analyse photographs using the different techniques. Lastly, it offers guidelines, with examples, for researchers wanting to publish their work.

Photographers and Research

This ground-breaking book situates research at the heart of photographic practice, asking the key question: What does research mean for photographers? Illuminating the nature and scope of research and its practical application to photography, the book explores how research provides a critical framework to help develop awareness, extend subject knowledge, and inform the development of photographic work. The authors consider research as integral to the creative process and, through interviews with leading photographers, explore how photographers have embedded research strategies into their creative practice.

The Photography Teacher's Handbook

The Photography Teacher's Handbook is an educator's resource for developing active, flipped learning environments in and out of the photo classroom, featuring ready-to-use methods to increase student engagement and motivation. Using the latest research on the cognitive science of effective learning, this book presents groundbreaking strategies to inspire students to collaborate, explore, and internalize photographic principles and concepts. The innovative practices in this book reimagine the traditional, scholarly pedagogy into a dynamic, teacher-guided, learner-centered approach. Key features include: Step-by-step instructions that explain how and why to flip a photography classroom Hands-on exercises and activities to help students take charge of their learning experience Practical advice from more than 100 respected photography educators An interactive companion website with informative videos, links, and resources for students and educators alike

Research in Photography

A body of photographic work is developed through knowledge gained in exploring the medium: investigating histories and theories of photography, observing the world, reading and listening, taking part in debate and critical reflection. With 150 images bringing together an eclectic range of photographic styles and genres, Fox and Caruana demonstrate how research can lead to fruitful, original photography projects. Designed to help you create better pictures, for portfolio or for profit, *Research in Photography* offers essential research and communication techniques to complement your technical expertise through a range of practical tools and examples. Two new chapters have been added to this second edition on 'Writing for Research' and 'Commercial Practice', as well as additional coverage discussing how to secure funding and professionalizing research.

Using Photographs in Social and Historical Research

This is an authoritative and insightful survey of the evolving field of photograph conservation. This volume is the first publication to chronicle the emergence and systematic development of photograph conservation as a profession.

Issues in the Conservation of Photographs

Photography Theory in Historical Perspective: Case Studies from Contemporary Art aims to contribute to the understanding of the multifaceted and complex character of the photographic medium by dealing with various case studies selected from photographic practices in contemporary art, discussed in the context of views and theories of photography from its inception. It uses case studies to explain photographic practices in contemporary art and place them in the context of theory. It presents current debates on theory of photography through comparisons to research of other visual media applicable to vernacular and documentary photography as well as art photography.

Photography Theory in Historical Perspective

In archaeology, photography is mainly used as a technique for gathering data and evidence. Within the framework of the research project '(in)site, site-specific photography revisited' the relationship between photography and archaeology, or broader, history is explored. How do photographers visualize history? What is the importance of place, particularly the place that remains after the event took place? How do photographers or artists use photography to depict the past, when time has become 'past time'? These articles and portfolios explore, both on practical and theoretical level, how history can be captured. The research project is an attempt to redefine the traditional relationship between archaeology and photography in order to produce new forms of image-making more adapted to contemporary visual culture. The project considers photography as a practice in which a picture is shaped and constructed by the photographer, not a practice in which a picture is mechanically taken.

Imaging History

This focus issue of the journal examines case studies from the field of photographic preservation and collections management. Guest Editor, Olivia Arnone, provides a history and context for the eponymous program based at the George Eastman Museum in Rochester, NY. Six amply-illustrated articles addressing this area of research follow.

Collections Vol 14 N2

Autobiographical memory and photography have been inextricably linked since the first photographs appeared during the 19th century. These links have often been described from each other's discipline in ways that often have led to misunderstandings about the complex relationships between them. *The Handbook of Research on the Relationship Between Autobiographical Memory and Photography* covers many aspects of the multiple relationships between autobiographical memory and photography such as the idea that memory and photography can be seen as forms of mental time and the effect photography has on autobiographical memory. Covering key topics such as identity, trauma, and remembrance, this major reference work is ideal for industry professionals, sociologists, psychologists, artists, researchers, scholars, academicians, practitioners, educators, and students.

Handbook of Research on the Relationship Between Autobiographical Memory and Photography

The before-and-after trope in photography has long paired images to represent change: whether affirmatively, as in the results of makeovers, social reforms or medical interventions, or negatively, in

the destruction of the environment by the impacts of war or natural disasters. This interdisciplinary, multi-authored volume examines the central but almost unspoken position of before-and-after photography found in a wide range of contexts from the 19th century through to the present. Packed with case studies that explore the conceptual implications of these images, the book's rich language of evidence, documentation and persuasion present both historical material and the work of practicing photographers who have deployed – and challenged – the conventions of the before-and-after pairing. Touching on issues including sexuality, race, environmental change and criminality, *Before-and-After Photography* examines major topics of current debate in the critique of photography in an accessible way to allow students and scholars to explore the rich conceptual issues around photography's relationship with time and imagination.

Before-and-After Photography

The use of images, particularly photography, has been steadily gaining popularity in academia, but there has not yet been a book that deals with the act and process of photo-taking in the field. Drawing upon 21 years of photographic experience and sociological research, Terence Heng's immersive and narrative style will: introduce photography as a qualitative method; discuss the intricacies of, challenges in and opportunities for using a camera in the field; explore common themes and topics in social science research, including photographing rituals, space, people and objects; advise on navigating the always evolving technological landscapes of traditional, digital and mobile photography. *Visual Methods in the Field: Photography for the Social Sciences* is a photography guide written for researchers by a researcher. Using in-depth ethnographic case studies from research done in various urban environments, this book will act as a crucial bridge for students in geography, sociology, education, media studies and other social sciences to incorporate photography into their research repertoire.

A Concise History of Photography

This textbook examines key debates in photographic theory and place them in their social and political context. This second edition includes key concepts, biographies of major thinkers and seminal references, and provides a coherent introduction to the nature of photographic viewing.

Visual Methods in the Field

The definitive history of photography book, *Seizing the Light: A Social & Aesthetic History of Photography* delivers the fascinating story of how photography as an art form came into being, and its continued development, maturity, and transformation. Covering major events, practitioners, works, and social effects of photographic practice, author Robert Hirsch provides a concise and discerning chronological account of photography, drawing on examples from across the world. This fundamental starting place shows the diversity of makers, inventors, issues, and applications, exploring the artistic, critical, and social aspects of the creative thinking process. This new edition has been fully revised and updated to include the latest advances in technology and digital photography, as well as information on contemporary photographers such as Granville Carroll, Meryl McMaster, Cindy Sherman, Penelope Umbrico, and Yang Yongliang. New topics include the rise of mobile photography and surveillance cameras, drone photography, image manipulation, protest and social justice photography, plus the roles of artificial intelligence and social media in photography. Highly illustrated with over 250 full-color images and contributions from hundreds of artists around the world, *Seizing the Light* serves as a gateway to the history of photography. Written in an accessible style, it is perfect for those newly engaging with the practice of photography and for experienced photographers wanting to contextualize their own work.

The Photo Essay

Nineteenth-century Italian commercial photography, the family album of an amateur British photographer, French medical photography, and collecting American daguerreotypes are among the topics discussed by leading photographic historians.

Photography

Rethinking Photography is an accessible and illuminating critical introduction to the practice and interpretation of photography today. Peter Smith and Carolyn Lefley closely link critical approaches to photographic practices and present a detailed study of differing historical and contemporary

perspectives on social and artistic functions of the medium, including photography as art, documentary forms, advertising and personal narratives. Richly illustrated full colour images throughout connect key concepts to real world examples. It also includes: Accessible book chapters on key topics including early photography, photography and industrial society, the rise of photography theory, critical engagement with anti-realist trends in the theory and practice of photography, photography and language, photography education, and photography and the creative economy Specific case studies on photographic practices include snapshot and portable box cameras, digital and mobile phone cultures, and computer-generated imagery Critical summaries of current photography theoretical studies in the field, displaying how critical theory has been mapped on to working practices of photographers and students In-depth profiles of selected key photographers and theorists and studies of their professional practices Assessment of photography as a key area of contemporary aesthetic debate Focused and critical study of the world of working photographers beyond the horizons of the academy. Rethinking Photography provides readers with an engaging mix of photographic case studies and an accessible exploration of essential theory. It is the perfect guide for students of Photography, Fine Art, Art History, and Graphic Design as well as practitioners from any background wishing to understand the place of photography in global societies today.

Seizing the Light

Seminar paper from the year 2022 in the subject Communications - Movies and Television, grade: 1,0, Tallinn University (Humanities), course: History of Environment and Technology: Fin de Siecle, language: English, abstract: This work provides an analytical approach towards the field of history and environment. It seeks to analyze the history of photographic technology as a means of depicting the environment in early-anthropological expeditions taking place in the time period of fin de siècle in the late 19th century. In order to study this anthropological method of research, Malinowski's Trobriand expedition serves as the centerpiece of research of historical narrative and technological development. The introduction of photography had certain consequences for the established method of documentation and visual representation on anthropological and ethnographical expeditions: painting. But was the introduction of photography really the death of painting? Bronislaw Malinowski's Trobriand expedition serves as the example to answer all those questions, because of its unique characteristics and circumstances. Malinowski's friend and famous polish painter (and later photographer) Ignacy Witkiewicz joins the expedition on invitation by Malinowski. The resulting paintings of Witkacy (ignacy Witkiewicz) "pejsaz australijski" have inspired this work to examine the changing work and shifting academic standards of anthropological expedition and ethnographic research. Following the entanglements of methodological research and questions of academic integrity and neutrality of anthropological research, this work aims to depict a complicated, yet important topic of the historical ramifications between environment and technology that is a constant aspect of how we live as humans. Sometimes with, and sometimes against our environment, but it has and will always play a part in our lives.

Six Exposures

Photography explores the photograph in the twenty-first century and its importance as a media form. Stephen Bull considers our media-saturated society and the place of photography in everyday life, introducing the theories used to analyze photographs and exploring the impact of digital technology. Topics covered include: *the identity of photography *the meanings of photographs *photography for sale *snapshots *the photograph as document *photography as art *photographs in fashion *photography and celebrity.

Rethinking Photography

This innovative text recounts the history of photography through a series of thematically structured chapters. Designed and written for students studying photography and its history, each chapter approaches its subject by introducing a range of international, contemporary photographers and then contextualizing their work in historical terms. The book offers students an accessible route to gain an understanding of the key genres, theories and debates that are fundamental to the study of this rich and complex medium. Individual chapters cover major topics, including: · Description and Abstraction · Truth and Fiction · The Body · Landscape · War · Politics of Representation · Form · Appropriation · Museums · The Archive · The Cinematic · Fashion Photography Boxed focus studies throughout the text offer short interviews, curatorial statements and reflections by photographers, critics and leading scholars that link photography's history with its practice. Short chapter summaries, research questions

and further reading lists help to reinforce learning and promote discussion. Whether coming to the subject from an applied photography or art history background, students will benefit from this book's engaging, example-led approach to the subject, gaining a sophisticated understanding of international photography in historical terms.

History of Photographic Technology as Method of Depicting the Environment

Throughout its early history, photography's authenticity was contested and challenged: how true a representation of reality can a photograph provide? Does the reproduction of a photograph affect its value as authentic or not? *From a Photograph* examines these questions in the light of the early scientific periodical press, exploring how the perceived veracity of a photograph, its use as scientific evidence and the technologies developed for printing it were intimately connected. Before photomechanical printing processes became widely used in the 1890s, scientific periodicals were unable to reproduce photographs and instead included these photographic images as engravings, with the label 'from a photograph'. Consequently, every image was mediated by a human interlocutor, introducing the potential for error and misinterpretation. Rather than 'reading' photographs in the context of where or how they were taken, this book emphasises the importance of understanding how photographs are reproduced. It explores and compares the value of photography as authentic proof in both popular and scientific publications during this period of significant technological developments and a growing readership. Three case studies investigate different uses of photography in print: using pigeons to transport microphotographs during the Franco-Prussian War; the debate surrounding the development of instantaneous photography; and finally the photographs taken of the Transit of Venus in 1874, unseen by the human eye but captured on camera and made accessible to the public through the periodical. Addressing a largely overlooked area of photographic history, *From a Photograph* makes an important contribution to this interdisciplinary research and will be of interest to historians of photography, print culture and science.

Coatings on Photographs

Defining photography is impossible. Revealing it is another matter, and that's what *The Concise Focal Encyclopedia of Photography* does, with each turn of the page. History: The technical origins and evolution of photography are half of the story. The other half consists of the ways that cultural forces have transformed photography into a constellation of practices more diverse than any other mode of representation. Photographers can tell a more in-depth story through a photo like Dorothea Lange's "Migrant Mother" than a journalist ever could with the written word alone. Major themes and practitioners: Over 25 entries, many with supporting illustrations, examine the figures, trends, and ideas that have contributed most heavily to the history and current state of photography. Contemporary issues: The issues influencing photography today are more complex than at any other time in its history. Questions of ethics, desire, perception, digitization, and commercialization all vie for attention. Hear what the experts have to say about crucial issues such as whether or not the images we take today will last the test of time, and if so, how? When material is covered this skillfully, "concise is no compromise. *The Concise Focal Encyclopedia of Photography* is packed with useful information, compelling ideas, and - best of all - pure pleasure.

Photography

Photographic Possibilities, Third Edition is a marvelously updated resource of innovative and traditional photographic processes that imagemakers have come to trust and depend on to enhance their technical knowledge, create astonishing pictures, and raise their visual consciousness. This concise and reliable handbook provides professional and advanced photography students with practical pathways of utilizing diverse photographic methods to produce engaging, expressive pictures from an informed aesthetic and conceptual position. This update, in full color for this first time, offers new links between analog and digital photography by featuring clear, up-to-date, step-by-step instructions on topics ranging from making ambrotypes and digital negatives to pre-picturemaking activities that utilize a thinking system to visually realize what is in your mind's eye in an effective and safe manner. This edition vividly showcases the thought-provoking work of over 140 international artists including Peter Beard, Dan Burkholder, Carl Chiarenza, Michael Kenna, Dinh Q. L., Joe Mills, Andrea Modica, Bea Nettles, France Scully and Mark Osterman, Robert & Shana ParkeHarrison, Holly Roberts, Martha Rosler, Mike and Doug Starn, John Sexton, Brian Taylor, Jerry Uelsmann, and Joel Peter Witkin as well as other major and emerging talents. Image captions explain how each artist technically realized their

vision and concept. All technical information and resources have been refreshed to provide the latest data for acquiring the products needed for these processes. Above all, this comprehensive reference provides field-proven know-how, encouragement, inspiration, and a profuse compendium of promising photo-based explorations one can discover and pursue. * Two new chapters bridging digital and analog photography, including a discussion of digital negatives. * Explains key techniques of Photogram, Cyanotype, Photo Weaving, Gum Prints, and more. * Completely revised to include updated resources and the newest information on where to find products or how to replace discontinued products. * Includes breathtaking photographs displaying how artists can apply different approaches with insight and aesthetic concern.

Global Photography

This book is a practical guide for professors who are interested in being more effective teachers.

From a Photograph

It is easy to make a picture. Right? Think again. Of course, in today world, pictures are everywhere and tools for making them are available to everybody. This is a good thing, of course. That was in the inception of photography and still is one of the main goals of this medium; ability to record and remember for everybody. This book takes you to the time when photographs were not easy to make; time when in order to make a photograph, you should have a knowledge of chemistry, medicine, geology, optics, physics, astronomy. When photography was not the right, but luxury; when it was not done with the click in the split of second, but it was slow work by hand. Cyanotype, Dive into the Blue Process, is a book that speaks about, for a long time now commercially obsolete but beautiful photographic process, the Cyanotype. The book is not intended for scientific research, advanced or professional photographic artwork. The book is intended for the starters in alternative photo processes and professional that could use simplification of the process. It is the summary of the experiences in working with this alternative process. However, this does not mean that the workflow is not complicated and it should be followed step by step. This book will cover all those steps needed to get educated and proficient in creation process. Today you can purchase every chemical needed for the creation of the cyanotype already premixed, even already presentenced paper. In that way you just need to put the negative, or the object we want to make a photogram of, and just expose it to the light. In this book you will find not just the chemical needed to make the solutions for mixing the your own magic lights catching potion, but also the reasons to do so. The cyanotype, the simplest among alternative photographic processes is made with combination of two, easy to get, chemicals. They have to be mixed in proper order and amounts for formula to work. These instructions should be followed strictly; however there is always space to experiment. Once the chemicals are separately mixed, they are also mixed together, and they become light sensitive. Once you have a light sensitive emulsion, you can start your work. In this book, we describe step-by-step, tool-by-tool, how do you get to this step and what you could expect. Everything else is left to you, your intuition, interests and creativity. For us, it was very important to perceive our work, so we taught it would be for you too. After you are done with creating, it is important to save your work, that is, to archive and present it in the right way. At the end of the book, its last chapters, you can find the sub-chapters that will explain the process of archiving and presenting, such as: flattening you prints; you can learn how to protect it from moisture and too much sun; how to mat your own work, and couple of different ways of framing your print. And believe me, if we could do it you can do it too About the Expert Marijana is a photographer based in Podgorica, Montenegro. She is student of Economy, but also for several years now a proficient photographer interested in analog technologies and alternative printing processes. Two years ago, Marijana tried Cyanotype process for the first time, immediately fell in love with it and since then uses it to create beautiful photograms of everything. It was not easy; she was charmed by Anna Atkins' Book of British Algae, its beauty, process and history, and it was hard to match it. However, even limited by resources and even essentials, she is able to learn and create on everyday bases. Today, she is confident in her skill of creation, and feels the need to share her experience and knowledge with others! HowExpert publishes quick 'how to' guides on all topics from A to Z by everyday experts.

The Concise Focal Encyclopedia of Photography

Collection of essays touching on the perils & ideologically driven historianship; the effect of computerization on photography & art education; the transformative impact of the lens on Western culture & the ethical issues raised by street photography.

Photography

The Encyclopedia of Nineteenth-Century Photography is the first comprehensive encyclopedia of world photography up to the beginning of the twentieth century. It sets out to be the standard, definitive reference work on the subject for years to come. Its coverage is global – an important ‘first’ in that authorities from all over the world have contributed their expertise and scholarship towards making this a truly comprehensive publication. The Encyclopedia presents new and ground-breaking research alongside accounts of the major established figures in the nineteenth century arena. Coverage includes all the key people, processes, equipment, movements, styles, debates and groupings which helped photography develop from being ‘a solution in search of a problem’ when first invented, to the essential communication tool, creative medium, and recorder of everyday life which it had become by the dawn of the twentieth century. The sheer breadth of coverage in the 1200 essays makes the Encyclopedia of Nineteenth-Century Photography an essential reference source for academics, students, researchers and libraries worldwide.

Perspectives on Photography

Basic Critical Theory for Photographers generates discussion, thought and practical assignments around key debates in photography. Ashley La Grange avoids the trap of an elitist and purely academic approach to critical theory, taking a dual theoretical and practical approach when considering the issues. Key critical theory texts (such as Sontag's 'On Photography' and Barthes' 'Camera Lucida') are clarified and shortened. La Grange avoids editorilising, letting the arguments develop as the writers had intended; it is the assignments which call into question each writer's approach and promote debate. This is the ideal book if you want to understand key debates in photography and have a ready-made structure within which to discuss and explore these fascinating issues. It is accessible to students, from high school to university level, but will also be of interest to the general reader and to those photographers whose training and work is concerned with the practical aspects of photography. Also includes invaluable glossary of terms and a substantial index that incorporates the classic texts, helping you to navigate your way through these un-indexed works. The book also contains useful information on photo-mechanical processes, explaining how a photograph can appear very differently, and as a result be interpreted in a range of ways, in a variety of books.

Resources in Education

"This monograph is dedicated to the career of Esther Bubley, one of America's leading photojournalists. Bubley's mentor was Roy Stryker, for whom she worked at the Office of War Information in Washington, D.C., and at Standard Oil in New York City. Under Stryker, Bubley learned to document the spectacle of modern industry and the lives of ordinary people in a fast-changing world. From the early 1940s to the late 60s, she also freelanced for national magazines, producing forty photo-essays for Life, a dozen more for the Ladies' Home Journal and numerous projects for non-profit organizations and major corporations alike." "The narrative essay by Bonnie Yochelson explains the working life of a photojournalist during the pre-television era, when picture magazines dominated the national media. The book includes seventy-five of her finest images as well as contact sheets and magazine layouts, which illustrate how Bubley's photographs were originally seen by millions of Americans."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Photographic Possibilities

However beautiful or technically dazzling your photographs might be, if they don't tell a story, convey an idea or make your viewer stop and think, they are unlikely to make a lasting impression. Context and Narrative in Photography introduces practical methods to help you plan, develop and present meaningful, communicative images. With dozens of examples from some of the world's most thought-provoking photographers, this is a beautiful introduction to a fascinating aspect of photography. Beginning with an exploration of different narrative techniques, you'll be guided through selecting and developing a compelling concept for your project and how it might be conveyed either through a single image or a series of photographs. You'll also learn ways to incorporate signs, symbols and text into your work and how to present the finished piece to best reach your audience. New to this edition are extended projects, additional exercises and discussion questions, expanded case studies, around 25% of the images and an expanded Chapter 6 on integrating text into photographic projects.

College Teaching at Its Best

Photography and Collaboration offers a fresh perspective on existing debates in art photography and on the act of photography in general. Unlike conventional accounts that celebrate individual photographers and their personal visions, this book investigates the idea that authorship in photography is often more complex and multiple than we imagine – involving not only various forms of partnership between photographers, but also an astonishing array of relationships with photographed subjects and viewers. Thematic chapters explore the increasing prevalence of collaborative approaches to photography among a broad range of international artists – from conceptual practices in the 1960s to the most recent digital manifestations. Positioning contemporary work in a broader historical and theoretical context, the book reveals that collaboration is an overlooked but essential dimension of the medium's development and potential.

Cyanotype 101

Published to accompany exhibition held at the Museum of Modern Art, Oxford, 16/3 - 6/7 1997.

Depth of Field

The Handmade Silver Gelatin Emulsion Print is a cookbook of simple, basic recipes for making black and white printing paper and paper negatives, along with creative options for printing, toning, and coloring. Author Denise Ross draws from photographic literature from the last 135 years, adapting old recipes to fit modern tools, materials, and work spaces and modern twists have been applied to traditional techniques. The book is divided into three sections: Section One lays the groundwork for this unique alternative process; Section Two provides the recipes; Section Three highlights contemporary silver gelatin artists. The book features over 200 full-color images and covers key topics including: Vocabulary: a list of terms used by traditional photographers and emulsion makers Creating work spaces with the right tools and materials Basic emulsion chemistry and paper coating techniques Working with various negative options, analog and digital Gaslight chloride contact printing paper Kodabromide-type chlorobromide all-purpose paper Bromide enlarging paper Warm tone paper and developers Making and toning your own printing-out paper (POP) Matte surface and baryta coating surface paper Paper negatives and making hand-drawn and digital masks Toning handmade paper Gum printing over handmade paper Troubleshooting handmade paper Artists working with handmade paper The Handmade Silver Gelatin Emulsion Print is for photographers who love the look and creative potential of black and white traditional photography but who want more control over the process and the end product. It is written for the beginner to experienced photographer, with processes initially explained in such a way that anyone will feel comfortable getting started, as well as information in increasing levels of complexity so that experienced photographers who enjoy a challenge will also find one.

Encyclopedia of Nineteenth-Century Photography
